Santa Fe, New Mexico 87505

Attention: Mr. William J. LeMay - Director

Dear Mr. LeMay:

Chevron U.S.A., Inc. respectfully requests administrative approval for surface comminging of the production from the above described wells.

Theodore Anderson #10 is completed in Weir; Blinebry. It is producing 66 bopd, 1 bwpd, and 266 mcfpd. The API gravity is 41.8° at 60° F.

Theodore Anderson #12 has recently been completed in Undesignated Abo. The IP was 41 bopd, 0 bwpd, and 3298 mcfpd. The AP1 gravity is 44° at 60° F.

The commingling of these wells will allow the producing of the wells into one battery at a savings of approximately \$50,000. The value of the commingled oil will be the same as the individual oils. The working interest owners and royalty owners are the same on the two wells.

The location of the battery is Unit P, Sec. 8, T20S, R37E, Lea County, NM. Attached is a schematic diagram of the production facility.

If you have any questions, of if you require further information, please contact Lloyd Trautman at (915) 687-7152.

Sincerely,

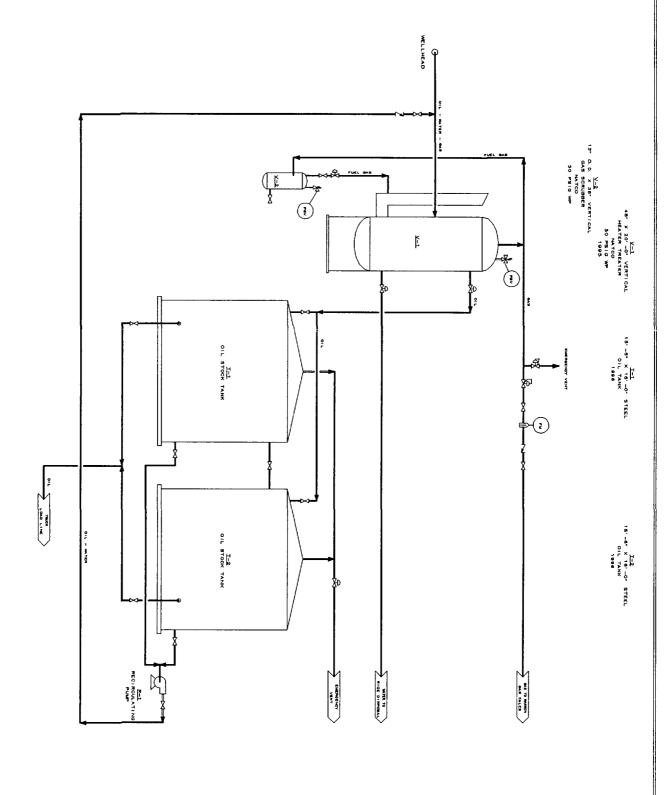

J. K. Ripley

g.K. Ripley
