Subject: Michener A7 Surface Commingle

Good Morning, David,

I'm following up with information upon your request on the above mentioned surface commingle application. The interest owners and the percentages are the same in both zones, Blanco Mesaverde and Otero Chacra. The reason for commingling is to install a compressor downstream of the separator, therefore, both zones will be going through one separator. Please let me know if you need any additional information.

Sincerely,
Yolanda Perez
