

Isolation OF Fresh Water Aquifer By One Cemented Casing String Results In Adequate Protection

Aquifer Protection:

1. Casing & cement across aquifer
2. Additional casing string (CS), possibly cemented, across aquifer
3. Injection tubing with corrosion barrier lining
4. Injection packer
5. At least 500' cement above top of injection zone
6. Current rules requiring monitoring and periodic testing of tubing x casing annulus and bradenhead
