

NOTICE

To: Osprey Resources, Inc., Clifford Cone, Robert B. Mitchell Trust, George G. Travis Trust, Estate of John L. Brady, and Marjo Operating, Inc., their successors and assigns, and any other interested person: Arch Petroleum Inc. has applied to the New Mexico Oil Conservation Division to establish a 160 acre non-standard gas spacing unit in the Jalmat Gas Pool comprising the SW $\frac{1}{4}$ of Section 16, Township 23 South, Range 37 East, NMPM, Lea County, New Mexico. The unit is to be dedicated to applicant's Kelly State Well No. 5, to be drilled at an unorthodox gas well location 910 feet from the south line and 1230 feet from the west line of Section 16. Applicant also requests approval to complete the well in the Langlie-Mattix (Seven Rivers-Queen-Grayburg) Pool within a standard 40 acre spacing and proration unit comprising the SW $\frac{1}{4}$ SW $\frac{1}{4}$ of Section 16 at an unorthodox oil well location therein. The application (Case No. 13343) will be heard at 8:15 a.m. on Thursday, October 7, 2004 at the Division's offices at 1220 South St. Francis Drive, Santa Fe, NM 87505. As an offset interest owner, you have the right to enter an appearance and participate in the case. The well and units are located approximately 9 miles south of Eunice, New Mexico.

Kelly State # 5

Proposed Jalmat./Langlie-Mattix New Drill

October 6, 2004

Arch Petroleum Inc proposes to drill a 3800' well in the SW $\frac{1}{4}$ §16-T23S-R37E on the Kelly State Lease. The well was staked 910' FSL and 1230' FWL of Section 16. This location was chosen to recover additional bypassed reserves in the primary objective, the Langlie-Mattix below 3220 feet. The secondary objective in the Kelly State # 5 is the Jalmat Gas, above 3220 feet. The proposed new drill is shown on X-§ A-A' with estimated formation depths.

Arch Petroleum Inc. purchased the Kelly State Lease in February 2004, and operates 3 active Langlie Mattix producers and one active injection/disposal well. The "Well Production Spreadsheet" on the X-§ B-B' montage lists each well with perforation and production data. Kelly State #1, #2, and #3 are perforated in the Langlie-Mattix Queen reservoir.

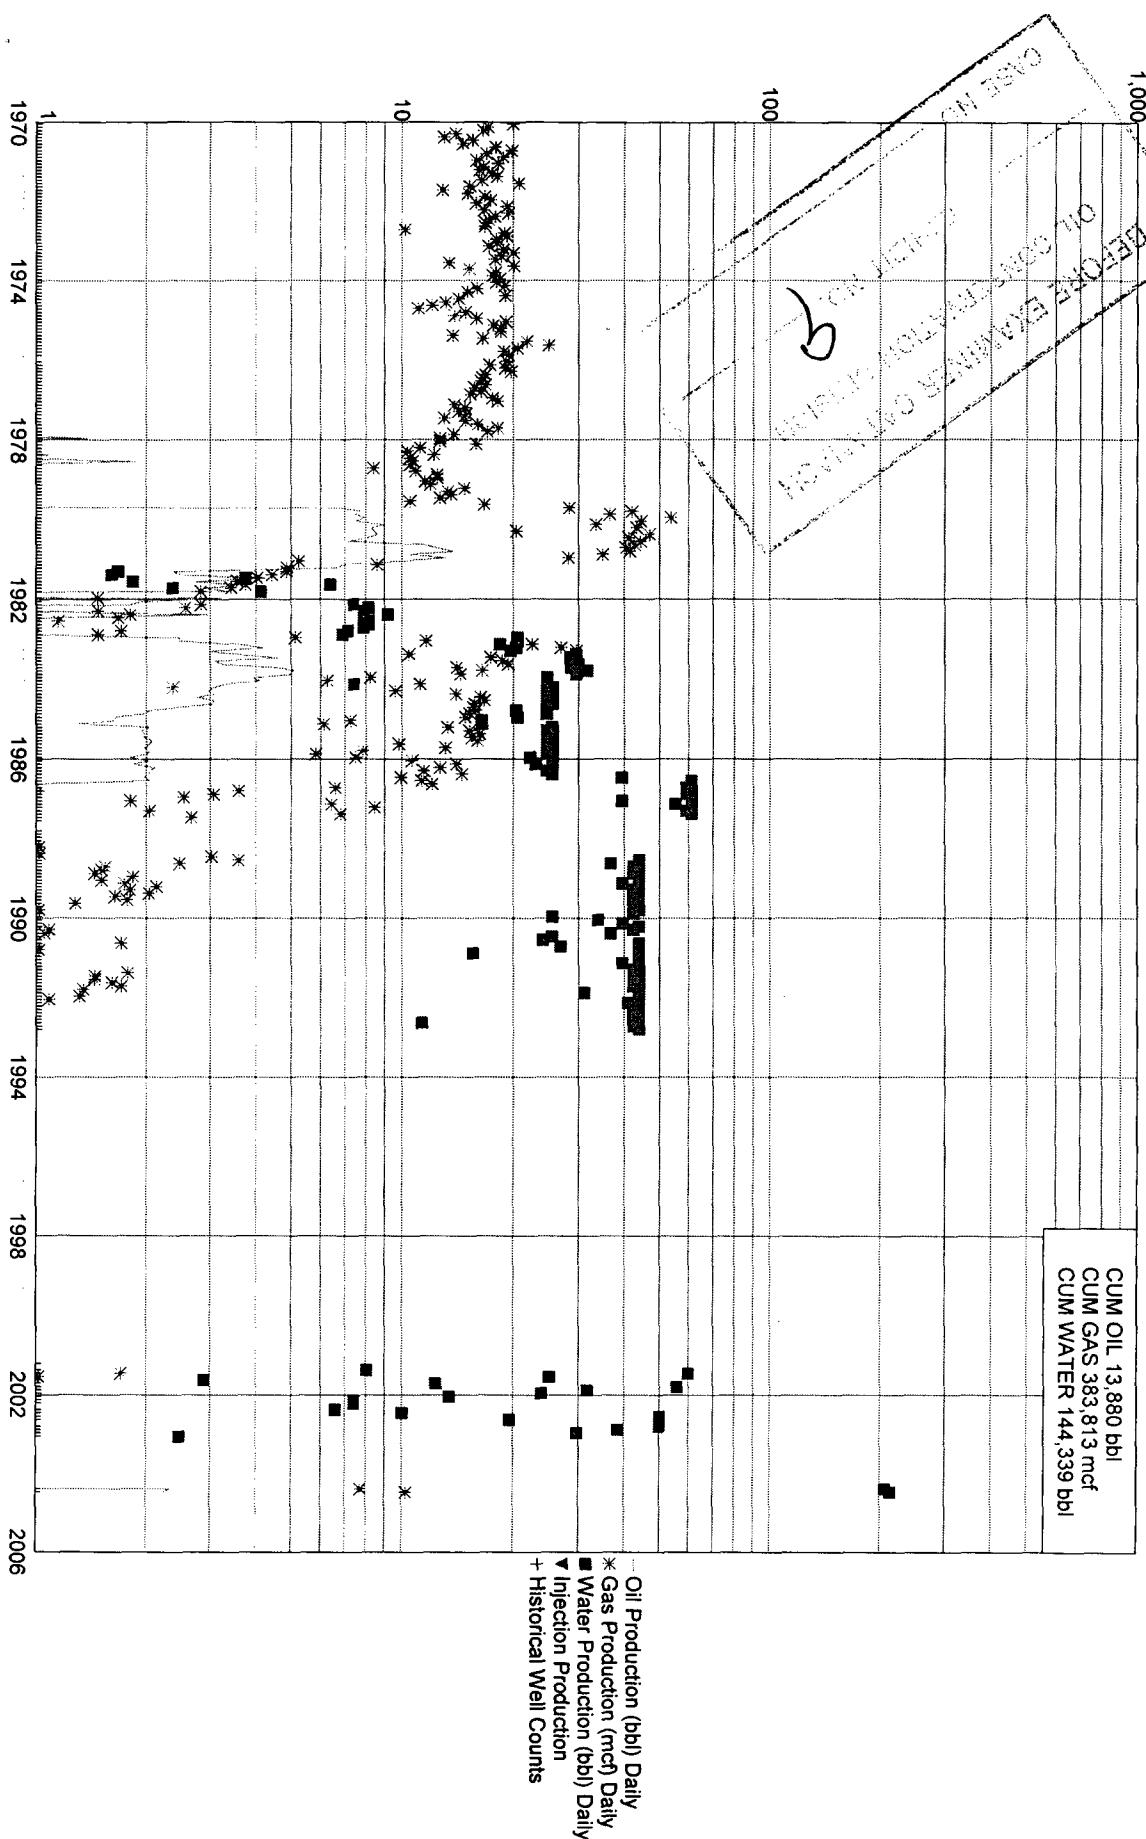

The Kelly State # 4 was perforated in the Queen from 3402' to 3553' in 1956. In 1967 the Kelly State #4 was perforated in the Yates and Seven Rivers formations from 2792' to 3166'. The zone was acidized and fracture stimulated with 20,000# sand and commingled with the Langlie-Mattix. Production reports indicated a modest increase in gas production. There is no record filed with the OCD of this 1967 recompletion to the Jalmat. It is my interpretation that this completion did not add significantly to the total gas production of the well. The small treatment was not adequate to effectively stimulate the Jalmat. The current production rate is 1 BOPD, 1 MCFD, and 55 BWPD. To evaluate the Jalmat potential in the Kelly State Lease, it is necessary to fracture stimulate the Jalmat in a new wellbore.

Glenn Curry,
Senior Geologist
