

San Juan Blanco - Mesaverde Pool Rules Change: Well Density Amendment

9/13/2018

SCANNED

San Juan Blanco - Mesaverde Pool Rules Change: Well Density Amendment

Oil Conservation Commission
Case No. _____
Exhibit No. 1

Case # 16403
9/13/2018

Executive Summary

Founded in 1949, the Blanco-Mesaverde Pool currently allows for 4 wells per gas spacing unit, with no more than 2 wells per $\frac{1}{4}$ section (160 acres). However, since 2008, multiple operators have come forward asking for pilot projects to amend the well spacing requirements in the Blanco-Mesaverde Pool in the San Juan Basin. All of these requests have been approved.

Hilcorp Energy Company (HEC), a Houston-based privately-held exploration and production company, is here seeking a full pool-wide revision to the Blanco-Mesaverde density rules. Based upon geologic and engineering analysis, including volumetric studies, recovery efficiency calculations, and a thorough review of the aforementioned pilot projects, HEC seeks approval to allow for up to 8 wells per gas spacing unit, with no more than 4 wells per $\frac{1}{4}$ section.

HEC does not seek to alter the current setback rules, which are 660'. The current setback was approved in 1998, when the well density was increased from 2 wells to 4 wells. At that time, the setback was decreased from 790' to the 660'.

Hearing Testimony Agenda

Land

Division Landman: Chuck Creekmore

- Hilcorp Operations across the Basin and in the Blanco-Mesaverde Pool and Mesaverde Formation
- History of Blanco-Mesaverde Pool Rules & setbacks
- Previous increased density projects

Geology

Geologist: Andrew Sparks

- Mesaverde Basin overview
- Paleogeography and depositional models
- Type Log
- Cross Sections
 - Heterogeneity and compartmentalization of Mesaverde Sands

Reservoir Engineering

Sr. Reservoir Engineer: Michelle Sivadon

- Mesaverde Basin overview
- Recovery Efficiencies
- Increased Well Density Hearing Well Performance
- Offset well interference (or lack thereof)
- Focus area example
- Analogs

San Juan Mesaverde-Blanco Pool

All San Juan Units

Blanco – Mesaverde Pool Facts

- **1949**
 - 1 well per 320 acres
- **1974**
 - Approved 2 well density per 320 acres (160 acre spacing)
- **1998 – Current Status**
 - Approved 4 wells per 320 (80 acre density); 2 wells per $\frac{1}{4}$ section
 - Setbacks reduced from 790' to 660'
 - Brent Smolik Testimony: "Sometime in the future, someone will be back before you asking for permission to drill additional wells beyond the four wells per GPU."
- **Seeking to allow for 8 wells per 320, no more than 4 per $\frac{1}{4}$ section**
 - Maintain 660' setbacks

Increased Well Density Examples

San Juan 27-5 Section 8

- Approved in 2008
- MV producers approved for 20 acre density
- 1 Section
- Case # 13888; Order # R-12864

Rosa Unit

- Pilot approved in 2009
 - 26 Sections
 - 20 40-acre wells
 - Case # 14291; Order # R-13123
- Unit Wide Expansion approval 4/19/2011
 - 96 Sections
 - Case # 14586; Order # R-13123-A

2018 Increased Well Density Hearings

- 62 Wells brought to NMOCD since January 2018 for well density exemption
- Identified areas not being adequately drained at current spacing regulations
 - 5th well in 320 acres and/or 3rd wells in 1/4 Sections
- No rejections, no opposition
- Focused on utilizing existing infrastructure
 - Limits environmental footprint

San Juan Basin Structure

- Relatively simple asymmetric basin
- Little to no faulting away from basin margins
- Relatively consistent SW-NE fracture trend
- Abundant Fracturing

Mesaverde Top Structure: TVDSS (FT)

San Juan Basin Schematic Cross Section

EAST

WEST

Cretaceous Paleogeography

Global conditions

- Temperate climate
- No polar ice (hot-house)
- High sea level
- Interior seaway connects Arctic and Gulf of Mexico

Local conditions

- Sediment source to west
- Marine shales (source rocks)
- Coastal plain fluvial and deltaic (reservoirs)
- Marine shoreface and offshore (reservoirs)
- Shoreline migration with sea level rise and fall

Cretaceous Sea Level

Near Shore Environments of Deposition

Point Lookout Formation

Shallow/marginal/transitional marine deposits typically characterized as blockier sands that are more continuous and sheet-like. However, significant continuity issues exist due to internal stratigraphy and ubiquitous fracturing.

Menefee Formation

Coastal plain deposits are typically more shaley and laterally discontinuous/compartimentalized.

Cliff House Formation

Consistent with blockier sands that are more continuous and sheet-like. However, significant continuity issues exist due to internal stratigraphy and ubiquitous fracturing.

Late Cretaceous Tight Gas Analogs

Mesaverde Type Log

Mesa Verde Group

Mancos FM

Mesaverde Geology: Cross Sections

Cross Section: A – A'

➤ **Flattened on Top Menefee**

➤ **Cliff House & Point Lookout packages are more continuous**

➤ Local heterogeneities and compartmentalization/flow boundaries still rampant due to stratigraphy & fracturing

➤ **Menefee Formation is much more discontinuous & compartmentalized**

➤ Typical of Fluvial/Coastal Plain deposits

27-5 Infill Project Heterogeneity

➤ At local scales (1 section), significant heterogeneity is evident

- Cliff House sand development: Blocky vs. Laminar
- Menefee Formation discontinuous & compartmentalized
- Menefee thickness varies >30'
- Point Lookout reservoir quality

Rosa Unit Mesaverde DFITs

Mesaverde Reservoir Pressures Calculated from DFIT

BEFORE THE OIL CONSERVATION DIVISION
 Santa Fe, New Mexico
 Case No. 14586 Exhibit No. 12
 Submitted by:
 WILLIAMS PRODUCTION CO., LLC
 Hearing Date: January 6, 2011

San Juan Basin Mesaverde Overview

	Volume
First Production	1951
MV OGIP Cliff House Menefee Pt Lookout	55.2 TCF 8.5 33.8 12.9
Cumulative Gas Produced	15.2 TCF (28% R.E.)
EUR (Assumes no future development)	19.1 TCF (35% R.E.)
Remaining Recoverable GIP (80% R.E.)	25 TCF
Productive Area (acres) / Sections	1.3 MM / 2,061
MV Takepoints	9,840

MV Remaining Recoverable GIP (RRGIP)

Observations

RRGIP assumes an 80% recovery efficiency

- Reasonable assumption for depletion drive gas reservoir

Many sections with RRGIP with no MV takepoints

Numerous sections with high RRGIP & multiple takepoints

MV Recovery Efficiencies

Northern Sections

- Lower OGIP
- Higher Recovery Efficiencies

Southern Sections

- Higher OGIP
- Low Recovery Efficiencies
- Largest potential for infills

Hilcorp 2018 Increased Well Density Hearing

Volumetrics

Reference Area	Volumetric OGIP	Section Equivalent OGIP	CTD / RF%	Remaining GIP	EUR / RF%
Qtr Section	8.4 Bcf	33.6 Bcf	3.0 Bcf / 36%	5.4 Bcf	4.0 Bcf / 48%
Section ⁽¹⁾	32.6 Bcf	33.4 Bcf	11.5 Bcf / 35%	21.1 Bcf	15.4 Bcf / 47%
9 Section	316.9 Bcf	35.2 Bcf	110.7 Bcf / 35%	206.2 Bcf	145.7 Bcf / 46%

- Includes wells heard through July 12, 2018 docket
- Average Remaining Gas in Place in Quarter Section of 5.4 Bcf
- Average Cumulative Recovery Factor to Date 36% and 35% in the Quarter Section and Section, respectively
- Considerable gas remaining in area with opportunity to recover additional volumes utilizing existing wellbores
- CTD RF and EUR RF are significantly below the 80% RF that would be expected from a depletion drive gas reservoir

⁽¹⁾ Not all sections are a full 640 acre section.

2008 Increased well Velocity Hearing Execution Results

Well	Max 24 Hr Rate (mcfd)	30 Day Avg Rate (mcfd)	Well	Max 24 Hr Rate (mcfd)	30 Day Avg Rate (mcfd)

22 Wells Executed

20 Well Avg Max 24 Hr Rate (mcfd): 615

20 Well Avg 30 Day Rate (mcfd): 509

* Menefee only
completed at this time

Recent Peak Rates for HEC Increased Density Wells

Key Takeaway: Similar rates seen between 80-acre spacing wells and increased well density wells

30 Day Avg IP – EUR Correlation

San Juan 28-5 Unit 62E MV Offsets IP vs. EUR

San Juan 28-6 Unit 136F MV Offsets IP vs. EUR

- 2018 projects' initial rates are outperforming expectations on average
- 2018 initial rate results are too early to speculate EUR
- There is a good correlation between 30 Day Avg IP and EUR
- Based on IP/EUR relationship, economic EURs will likely be achieved
- Company will continue to monitor performance and potential interference

ROSA UNIT #035X

Rosa Unit #035X

MV Remaining Recoverable GIP (RRGIP)

- 1,957 Historic Dakota Producers with no MV production
 - 1275 are currently producing
- Uses existing infrastructure to effectively capture remaining reserves
 - Effectively reduces surface disturbance and footprint
- Area of focus for subsequent exhibit

Focus Area Potential MV Zone Adds

Focus Area EUR RE: 42%

- Calculated using current and historic MV take points
- Assumes no future development

Identified 102 Potential MV Zone Adds

- Dakota Production
- No Mesaverde Production
- Meets/Exceeds Hilcorp Economic Hurdles

With Proposed Additional Development, Focus Area EUR RE: 43%

Reviewed and approved by 3rd party reserves auditor

- SEC Compliant

Area is only ~200,000 acres.

- Mesaverde Productive area is 1.36 million acres

San Juan Mesaverde Analogs

San Juan Mesaverde

- Shallow marine and fluvial environments
- 0.02-0.4 md Avg Permeability
- Abundant Fracturing
- Currently experiencing low recovery efficiencies
- Currently at 80 acre well spacing
- 660' setbacks
- Seeking 40 acre well density spacing

Piceance Basin*

- Williams Fork Formation: Fluvial environments
- "Very Low Permeability...restricted fluid movement"
 - 0.01 - 0.5 md
- Extensive natural fracturing
- "Production logs show good contribution from tight sands that weren't usually completed in the past."
- 10 acre well spacing
- 100' setbacks

*Cumella, AAPG 7/30/2009: Geology of the Piceance Basin Mesaverde Gas Accumulation

Green River Basin**

- Almond Formation: Shallow marine and fluvial environments
- 0.01 to 50 md
- 5 Acre spacing
 - Ultra Petroleum recently received approval from WOGC

**Keighin et al., 1/15/1989: Petrology and Reservoir Characteristics of the Almond Formation, Greater Green River Basin, Wyoming

CERTIFIED RECEIPT REQUESTED

TO: ALL DISTRICT III OPERATORS

Re: Application of Hilcorp Energy Company to Amend the Well Density And Location Requirements And Administrative Exceptions of the Special Rules for the Blanco-Mesaverde Gas Pool, Rio Arriba and San Juan Counties, New Mexico.

Ladies & Gentlemen:

This letter is to advise you that Hilcorp Energy Company has filed the enclosed application with the New Mexico Oil Conservation Division. This application will be set for hearing before the Commission at 9:00 a.m. on September 6, 2018. The hearing will be held in Porter Hall in the Oil Conservation Division's Santa Fe Offices located at 1220 South Saint Francis Drive, Santa Fe, New Mexico 87505. You are not required to attend this hearing, but as an owner of an interest that may be affected by this application, you may appear and present testimony. Failure to appear at that time and become a party of record will preclude you from challenging the matter at a later date.

Parties appearing in cases are required by Division Rule 19.15.4.13.B to file a Pre-hearing Statement four business days in advance of a scheduled hearing. This statement must be filed at the Division's Santa Fe office at the above specified address and should include: the names of the parties and their attorneys; a concise statement of the case; the names of all witnesses the party will call to testify at the hearing; the approximate time the party will need to present its case; and identification of any procedural matters that are to be resolved prior to the hearing.

If you have any questions about this matter, please contact Chuck Creechmore at (832) 839-4601.

Sincerely,

Adam G. Rankin

ATTORNEY FOR HILCORP ENERGY COMPANY

**APPLICATION OF HILCORP ENERGY
COMPANY TO AMEND THE WELL
DENSITY AND LOCATION
REQUIREMENTS AND ADMINISTRATIVE
EXCEPTIONS OF THE SPECIAL RULES
FOR THE BLANCO-MESAVERDE GAS
POOL, RIO ARRIBA AND SAN JUAN
COUNTIES, NEW MEXICO.**

CASE NO. 16403

APPLICATION

Hilcorp Energy Company, ("Hilcorp") (OGRID No. 372171), through its undersigned counsel, hereby files this application with the Oil Conservation Division for an order amending the Well Density Requirements for the Blanco-Mesaverde Gas Pool (72319) to permit up to eight wells in a standard 320-acre gas proration and spacing unit ("GPU") and up to four wells within either quarter section in a GPU. In support of this application, Hilcorp states:

1. Hilcorp is the operator of approximately 5,329 wells currently producing from the Blanco-Mesaverde Gas Pool, which covers a large portion of the San Juan Basin across Rio Arriba and San Juan Counties, New Mexico.
2. Hilcorp also operates thousands of wells that are currently producing from other formations in the region that are well situated to be simultaneously dedicated and re-completed within the Blanco-Mesaverde Gas Pool to recover additional reserves which are not being adequately drained under the existing well density pattern in the existing Special Rules. In

addition, Hilcorp has identified areas in the pool where infill wells can develop reserves that would otherwise remain unproduced.

3. The Blanco-Mesaverde Gas Pool is governed by Special Rules which provide for 320-acre GPUs on which as many as four wells may be drilled with only two wells in each 160-acre quarter section. *See* Order No. R-8170, as superseded by Order No. R-10987-A, and amended by Order No. R-10987-A(1), effective Dec. 2, 2002. The Special Rules currently provide:

I. ACREAGE AND WELL LOCATION REQUIREMENTS

A. Standard GPU (Gas Proration Unit): A standard GPU in the Blanco-Mesaverde Pool shall be 320 acres, more or less, comprising any two contiguous quarter sections of a single section that is a legal subdivision of the U. S. Public Land Surveys.

B. Well density:

(1) Up to four (4) wells may be drilled on a standard GPU, as follows:

(a) the FIRST OPTIONAL INFILL WELL drilled on a GPU shall be located in the quarter section not containing the INITIAL Mesaverde well;

(b) the SECOND OPTIONAL INFILL WELL drilled on a GPU shall be located in a quarter-quarter section not containing a Mesaverde well and within a quarter section not containing more than one (1) Mesaverde well;

(c) the THIRD OPTIONAL INFILL WELL drilled on a GPU shall be located in a quarter-quarter section not containing a Mesaverde well and within a quarter section not containing more than one (1) Mesaverde well;

(d) at the discretion of the operator, the second or third optional infill well may be drilled prior to the drilling of the first optional infill well;

(e) no more than two wells shall be located within either quarter section in a GPU; and

(f) any deviation from the above-described well density requirements shall be authorized only after hearing.

II. ADMINISTRATIVE EXCEPTIONS:

The Division Director, in accordance with Division Rule 104, may administratively grant an exception to the well locations [sic] requirements of I.C above upon application to the Division which includes notification by certified mail-return receipt requested to affected parties. [See Division Rule 1207.A(2)].

Order No. R-10987-A(1).

4. Under more than thirty applications filed since January 2018, Hilcorp has requested and received orders granting 62 well density exceptions under the Special Rules. These orders have permitted Hilcorp to re-complete and simultaneously dedicate existing wells within the Blanco-Mesaverde Gas Pool that had been targeting and developing gas reserves in deeper formations.

5. In every case, Hilcorp's testimony and exhibits on the geology and reservoir characteristics supported increasing well density to allow Hilcorp to target additional reserves in the Mesaverde formation which would remain unproduced under existing well density requirements imposed by the Special Rules.

6. Based upon prior geologic and engineering studies, as well as engineering data from these recent re-completions, Hilcorp has determined that the Blanco-Mesaverde Gas Pool Rules should be updated to permit up to eight wells per 320-acre GPU and four wells in each quarter section within a GPU to prevent waste and increase ultimate gas recovery.

7. Hilcorp's request and amendment of the Special Rules is supported by review of the history and development of the Blanco-Mesaverde Gas Pool.

8. The Blanco-Mesaverde Gas Pool was first created by the New Mexico Oil Conservation Commission ("Commission") in 1949 under Order No. 799 in Case No. 163. In

that Order the Commission adopted 320-acre gas proration units ("GPU") on the assumption that one well would adequately drain and develop 320-acres. *See* Order R-10987-A, ¶ 7.

9. As the pool was developed, it became apparent that a single well could not drain a 320-acre gas proration unit. By 1974, the Commission had concluded that one well per GPU was inadequate. *See* Order No. R-1670-T. To avoid waste, the Commission ruled that more than one well was necessary to drain the reserves and increased the well density in the pool to 160-acre infill well spacing by approving an optional infill well within the 320-acre GPUs. *See* Order R-10987-A, ¶ 9.

10. After further development of the pool on 160-acre spacing, Hilcorp's predecessor-in-interest Burlington Resources Oil and Gas Company ("Burlington") determined in the 1990s that two wells per 320-acre GPU (160-acre spacing) also was inadequate to adequately drain the pool. It presented geologic studies and reservoir engineering data to the Division showing that the Mesaverde formation is a tight, low-permeability reservoir which tends to produce low ultimate recoveries per well. Burlington's studies also demonstrated that not all sandstones that comprise the Mesaverde are continuous throughout the formation, or even within a single GPU or a 160-acre quarter section. Based on these studies, the Division concluded in 1998 that 160-acre well spacing was insufficient to drain most of the acreage in the pool due to its low-permeability and because 160-acre well spacing did not ensure that wells would intersect and fully develop discontinuous sandstones across the pool. The Division therefore issued Order R-10987-A which increased the pool's well density from two wells per 320-acre GPU to four wells per 320-acre GPU, or 80-acre infill well spacing. *See* Order R-10987-A, ¶ 2.

11. At the 1998 hearing, Burlington's witnesses further noted that existing data indicated areas within the pool had wells which were draining only 40 acres. They testified that

further down-spacing in the pool would likely be necessary to prevent waste and that "sometime in the future, someone will be back before you asking for permission to drill additional wells beyond the four wells per GPU." See Case No. 12069, Hearing. Tr., dated Oct. 29, 1998, at 49:1-3 (testimony of Brent Smolik).

12. After twenty years of development on 80-acre well spacing, the geologic and engineering data available confirms what Burlington predicted in 1998: That increasing well density in the pool to 40-acre infill spacing is necessary to prevent waste and drain unrecovered gas reserves from the tight, low-permeability sandstones which comprise the Mesaverde formation.

13. Accordingly, Hilcorp requests that the Special Rules for the Blanco-Mesaverde Gas Pool be amended as follows:

I. ACREAGE AND WELL LOCATION REQUIREMENTS

A. Standard GPU (Gas Proration Unit): A standard GPU in the Blanco-Mesaverde Pool shall be 320 acres, more or less, comprising any two contiguous quarter sections of a single section that is a legal subdivision of the U. S. Public Land Surveys.

B. Well density:

(1) Up to ~~four-eight (48)~~ vertical wells may be drilled on a standard GPU, as follows:

(a) ~~the FIRST OPTIONAL INFILL WELL drilled on a GPU shall be located in the quarter section not containing the INFILL Mesaverde well;~~

(b) ~~the SECOND OPTIONAL INFILL WELL drilled on a GPU shall be located in a quarter-quarter section not containing a Mesaverde well and within a quarter section not containing more than one (1) Mesaverde well;~~

(c) ~~the THIRD OPTIONAL INFILL WELL drilled on a GPU shall be located in a quarter-quarter section not containing a~~

~~Mesaverde well and within a quarter section not containing more than one (1) Mesaverde well;~~

~~(d) at the discretion of the operator, the second or third optional infill well may be drilled prior to the drilling of the first optional infill well;~~

(e2) ~~Nno~~ more than two ~~four~~ (4) wells shall be located within either quarter section in a GPU; and

(f3) ~~a~~Any deviation from the above-described well density requirements shall be authorized only after hearing.

II. ADMINISTRATIVE EXCEPTIONS:

The Division Director, in accordance with ~~Division Rule 104~~ Subsection C of 19.15.15.11 NMAC, may administratively grant an exception to the well locations requirements of I.C-B above upon application to the Division which includes notification by certified mail-return receipt requested to affected partiespersons. [See ~~Division Rule 1207.A(2)~~ 19.15.2.7.A(8) NMAC].

14. Copies of this application have been provided to all operators in the northwest portion of the state identified to Hilcorp by the Division.

15. Approval of this application will be in the best interest of conservation, the prevention of waste, and the protection of correlative rights.

WHEREFORE, Hilcorp Energy Company requests that this application be set before an Examiner of the Oil Conservation Division on September 6, 2018, and, after notice and hearing as required by law, that the Division enter an order granting this application.

Respectfully submitted,

HOLLAND & HART LLP

Case No. 16403
Exhibit No. 5

STATE OF NEW MEXICO ENERGY, MINERALS AND NATURAL RESOURCES DEPARTMENT OIL CONSERVATION COMMISSION SANTA FE, NEW MEXICO

The State of New Mexico through its Oil Conservation Commission hereby gives notice pursuant to law and the Rules and Regulations of the Commission of the following public hearing to be held at 9:00 A.M. on **September 13, 2018**, in the Oil Conservation Commission Hearing Room at 1220 South St. Francis, Santa Fe, New Mexico, before the Commission. If you are an individual with a disability who is in need of a reader, amplifier, qualified sign language interpreter, or any other form of auxiliary aid or service to attend or participate in the hearing, please contact: Florene Davidson at 505-476-3458 or through the New Mexico Relay Network, 1-800-659-1779 by **September 3, 2018**. Public documents, including the agenda and minutes, can be provided in various accessible forms. Please contact Florene Davidson if a summary or other type of accessible form is needed.

STATE OF NEW MEXICO TO:
All named parties and persons
having any right, title, interest
or claim in the following case
and notice to the public.

(NOTE: All land descriptions herein refer to the New Mexico Principal Meridian whether or not so stated.)

TO: ALL OPERATORS IN THE BLANCO MESAVERDE GAS POOL (POOL CODE 72319)

Case No. 16403: Application of Hilcorp Energy Company to Amend the Well Density And Location Requirements And Administrative Exceptions of the Special Rules for the Blanco-Mesaverde Gas Pool, Rio Arriba and San Juan Counties, New Mexico. Applicant seeks to amend the Well Density Requirements of the Special Rules for the Blanco-Mesaverde Gas Pool (72319) for purposes of increasing well density for Mesaverde wells, Rio Arriba and San Juan Counties, New Mexico. Applicant seeks to update Rule I.B for the Special Rules for the Blanco-Mesaverde Gas Pool to authorize infill drilling, or simultaneous dedications of well recompletions, for up to eight wells within in a standard 320-acre gas spacing unit ("GPU") by increasing the well density from the current maximum of four (4) wells (80-acre infill) as provided in Order R-10987-A(1) to a maximum of eight (8) wells (40-acre infill) per 320-acre GPU and up to four (4) wells within either quarter section within a GPU. Applicant also proposes to eliminate the well location requirements for each GPU and to update regulatory references in the Administrative Exceptions provision.
