

**STATE OF NEW MEXICO
DEPARTMENT OF ENERGY, MINERALS AND NATURAL RESOURCES
OIL CONSERVATION DIVISION**

**APPLICATION OF SOUTHWEST ROYALTIES, INC.
FOR APPROVAL OF EXPANSION OF
PRESSURE MAINTENANCE PROJECT,
LEA COUNTY, NEW MEXICO**

Case No. _____

APPLICATION

Pursuant to 19.15.26.8.F NMAC, Southwest Royalties, Inc. ("SRI") (OGRID No. 21355) requests an order authorizing SRI to expand the Flying 'M' San Andres Pressure Maintenance Project ("Project") area and convert three of its producing wells to injectors. In support of its application, SRI states the following.

1. The Division issued Order R-3229 approving the Project on May 3, 1967. The Division has previously authorized SRI to expand the Project and most recently did so on September 9, 2003 in Administrative Order PMX-222.

2. The current Project area includes the following lands in Township 9 South, Range 33 East in Lea County:

Section 15: W/2 W/2
Section 16: all
Section 17: all
Section 20 E/2 and E/2 NW/4
Section 21: all
Section 22: W/2 W/2
Section 27: W/2 NW/4
Section 28: N/2, SW/4, and W/2 SE/4
Section 29: all
Section 32: NE/4 and E/2 NW/4
Section 33: W/2 NW/4 and NE/4

3. SRI seeks authorization to expand the Project area to include the NE/4 of Section 31, Township 9 South, Range 33 East.

4. SRI also seeks authorization to convert the following producing wells to injection wells: Flying 'M' SA Unit #131 (API No. 30-025-20561), McGuffin #3 (API No. 30-025-24694), and Gonsales 31 Federal #2 (API No. 30-025-24004). SRI's Application for Authorization to Inject (Division Form C-108) is attached as Exhibit A.

5. The Flying 'M' SA Unit #131 well is located within the current Project area at 1978' FNL and 1993' FWL in Unit F in Section 21, Township 9 South, Range 33 East. The proposed injection interval is located in the San Andres formation at a depth of 4,456 to 4,518 feet, and the proposed maximum injection rate is 600 barrels per day at a maximum injection pressure of 800 psig.

6. The McGuffin #3 well is located within the current Project area at 660' FNL and 1980' FWL in Unit C in Section 29, Township 9 South, Range 33 East. The proposed injection interval is located in the San Andres formation at a depth of 4,354 to 4,422 feet, and the proposed maximum injection rate is 600 barrels per day at a maximum injection pressure of 800 psig. SRI obtained Division approval to plug the well in 2017 but now desires to convert the well to injection.

7. The Gonsales 31 Federal #2 well is located within the expanded Project area at 1980' FNL and 660' FEL in Unit H in Section 31, Township 9 South, Range 33 East. The proposed injection interval is located in the San Andres formation at a depth of 4,261 to 4,294 feet, and the proposed maximum injection rate is 600 barrels per day at a maximum injection pressure of 800 psig.

8. SRI is the designated operator of the Project. 100% of the working interests are committed to the Project.

9. The expansion of the Project will serve the interests of conservation, the protection of correlative rights, and the prevention of waste.

WHEREFORE, SRI requests that this Application be set for hearing on February 6, 2020 and that, after notice and hearing, the Division enter an order approving the expansion of the Project to include the NE/4 of Section 31, Township 9 South, Range 33 East and authorizing SRI to convert to injection the Flying 'M' SA Unit #131, McGuffin #3, and Gonsales 31 Federal #2 wells.

Respectfully submitted,

HINKLE SHANOR LLP

Exhibit A

APPLICATION FOR AUTHORIZATION TO INJECT

- I. PURPOSE: Secondary Recovery ☒ Pressure Maintenance ☐ Disposal ☐ Storage
Application qualifies for administrative approval? ☒ Yes ☐ No
- II. OPERATOR: Southwest Royalties, Inc.
ADDRESS: P. O. Box 53570, Midland, TX 79710
CONTACT PARTY: Danny Holcomb, Agent PHONE: 806-471-5628
- III. WELL DATA: Complete the data required on the reverse side of this form for each well proposed for injection.
Additional sheets may be attached if necessary.
- IV. Is this an expansion of an existing project? ☒ Yes ☐ No
If yes, give the Division order number authorizing the project: R-3229 issued in case no. 3555 dated 5/3/1967
- V. Attach a map that identifies all wells and leases within two miles of any proposed injection well with a one-half mile radius circle drawn around each proposed injection well. This circle identifies the well's area of review.
- VI. Attach a tabulation of data on all wells of public record within the area of review which penetrate the proposed injection zone. Such data shall include a description of each well's type, construction, date drilled, location, depth, record of completion, and a schematic of any plugged well illustrating all plugging detail.
- VII. Attach data on the proposed operation, including:
1. Proposed average and maximum daily rate and volume of fluids to be injected;
 2. Whether the system is open or closed;
 3. Proposed average and maximum injection pressure;
 4. Sources and an appropriate analysis of injection fluid and compatibility with the receiving formation if other than reinjected produced water; and,
 5. If injection is for disposal purposes into a zone not productive of oil or gas at or within one mile of the proposed well, attach a chemical analysis of the disposal zone formation water (may be measured or inferred from existing literature, studies, nearby wells, etc.).
- *VIII. Attach appropriate geologic data on the injection zone including appropriate lithologic detail, geologic name, thickness, and depth. Give the geologic name, and depth to bottom of all underground sources of drinking water (aquifers containing waters with total dissolved solids concentrations of 10,000 mg/l or less) overlying the proposed injection zone as well as any such sources known to be immediately underlying the injection interval.
- IX. Describe the proposed stimulation program, if any.
- *X. Attach appropriate logging and test data on the well. (If well logs have been filed with the Division, they need not be resubmitted).
- *XI. Attach a chemical analysis of fresh water from two or more fresh water wells (if available and producing) within one mile of any injection or disposal well showing location of wells and dates samples were taken.
- XII. Applicants for disposal wells must make an affirmative statement that they have examined available geologic and engineering data and find no evidence of open faults or any other hydrologic connection between the disposal zone and any underground sources of drinking water.
- XIII. Applicants must complete the "Proof of Notice" section on the reverse side of this form.
- XIV. Certification: I hereby certify that the information submitted with this application is true and correct to the best of my knowledge and belief.
- NAME: Danny J. Holcomb TITLE: Agent
SIGNATURE:  DATE: 11/25/2019
E-MAIL ADDRESS: danny@pwillc.net
- * If the information required under Sections VI, VIII, X, and XI above has been previously submitted, it need not be resubmitted. Please show the date and circumstances of the earlier submittal: _____
- DISTRIBUTION: Original and one copy to Santa Fe with one copy to the appropriate District Office

Southwest Royalties, Inc.
Flying 'M' San Andres Pressure Maintenance Project Expansion
T9S, R33E, Lea County, New Mexico
C108 Application for Authorization to Inject

I.

The purpose of this application is seeking NMOCD approval for the expansion of the Flying 'M' San Andres Pressure Maintenance Project by converting three wells to injection into the San Andres formation, Flying M; San Andres Pool.

II.

Operator: Southwest Royalties, Inc.

Address: P. O. Box 53570, Midland, Texas 79710

Contact Party: Todd Yocham (432) 685-9038 email: tyocham@swrpermian.com

III.

Well Names	API Numbers	ULSTR	Injection Interval
Flying 'M' SA Unit #131	30-025-20561	F-21-9S-33E	4456' – 4518'
McGuffin #3	30-025-25694	C-29-9S-33E	4354' – 4422'
Gonzales 31 Federal #2	30-025-24004	H-31-9S-33E	4261' – 4294'

Operator: Southwest Royalties, Inc. OGRID: 21355

Proposed Formation: Flying 'M' San Andres (Pool Code: 24620)

Please see Exhibit "A" for additional well data.

IV.

This is an expansion of the Flying 'M' Field Pressure Maintenance Project. This project was approved by Order R-3229, issued in Case No. 3555 on 5/3/1967 and subsequently expanded multiple times. The approved project area, as of the date of this application, is described as follows:

Lea County, New Mexico

Township 9 South, Range 33 East, NMPM

Section 15: W/2 W/2

Section 16: All

Section 17: All

Section 20: E/2 and E/2 NW/4

Section 21: All

Section 22: W/2 W/2

Section 27: W/2 NW/4

Section 28: N/2, SW/4, and W/2 SE/4

Section 29: All (W/2 W/2 added via PMX-197 on 7/30/1998)

Section 32: NE/4 and E/2 NW/4

Section 33: W/2 NW/4, and NE/4 (NE/4 added via PMX-33 on 11/28/1969)

Please see Exhibit "A" for a project area map with the three proposed new injectors identified and candidate well wellbore diagrams.

Southwest Royalties, Inc.
Flying 'M' San Andres Pressure Maintenance Project Expansion
T9S, R33E, Lea County, New Mexico
C108 Application for Authorization to Inject

V.

Please see Exhibit "B" for a 2 mile radius lease map.

VI.

There are thirty offset wells located within the three wells' 0.5 mile Areas of Review. Three of these offset wells do not penetrate the proposed disposal interval. Twenty-seven of these offset wells do penetrate the proposed disposal interval. See AOR maps, list of offset wells and offset wellbore diagrams in Exhibit "C".

VII.

1. Anticipated injection volume per well – 300 BWPD with a maximum of 600 BWPD.
2. System will be closed. Water will be piped to the injectors from the waterflood pump station.
3. Anticipated injection pressure: Average 500 psig, Maximum 800 psig.
4. Injection fluid will be produced water from the Flying M San Andres Field. No compatibility issues are anticipated. Please see Exhibit "D" for produced water analysis from area wells.
5. Injection will be into the productive Flying 'M' San Andres Pool for the purpose of increasing the ultimate recovery of oil within the project area.

VIII.

Formation	Average Depth (ft)
T. Anhydrite	1750
T. San Andres	3650
Proposed injection interval	4261 – 4518
T. Abo	7750

There are no overlying productive formations in the Flying 'M' Field. The nearest underlying productive formation is the Abo which is approximately 3000 feet deeper than the San Andres.

The only known fresh water formation in this area is found at 40 – 50 feet which is approximately 4200 feet above the proposed injection interval in the San Andres formation.

Each proposed injection well was originally drilled as San Andres producers. The proposed conversion to injection would be through existing perforations at noted in Section III above.

IX.

Proposed Completion Procedure: Pull and lay down production tubing. Run 2-3/8" internally plastic-coated tubing and injection packer, set packer within 100 feet of the top perf, pressure test casing. Use existing perforations for injection. Perform pump-in test to establish injection rate. If pump-in test results are favorable, no stimulation is planned. If pump-in test results are unfavorable, an acid job will be pumped.

Southwest Royalties, Inc.
Flying 'M' San Andres Pressure Maintenance Project Expansion
T9S, R33E, Lea County, New Mexico
C108 Application for Authorization to Inject

X.

Any logs performed will be submitted after completion.

XI.

NM OSE records indicate there is 1 fresh water well within the three 1 mile Areas of Review. See Exhibit "E" for copies of OSE data base queries, an AOR map and water sample test results.

XII.

Please see Exhibit "F" for geological affirmative statement concerning open faults or hydrological connection between the proposed injection interval and any underground sources of drinking water has been found.

XIII.

Please see Exhibit "G" for Proof of Notice. Included is a map of the Areas of Review, list of affected parties and certified mail electronic signature receipts for notices. Per Rule 11(3) of Order R-3555 dated 5/3/1067, each noticee was provided a complete copy of the PMX expansion application. The original affidavit of publication from the Lovington Leader newspaper for the required public notice is included under separate cover.

Well Data

Data obtained from records maintained by the operator and NMOCD.

Well spudded on 9/10/1963 by Coastal States Gas Producing Company as a Bough 'C' oil well test.

13-3/8" 54.5# casing was set in 17-1/2" hole at 405'. Cemented with 350 sacks of cement. Cement circulated to surface.

8-5/8" 32# casing was set in 12-1/4" hole at 3993'. Cemented with 650 sacks of cement. Cement circulated to surface.

5-1/2" 15.5# casing was set in 7-7/8" hole at 9407'. Cemented with 350 sacks of cement. Cement did not circulate. Top of cement at 7050' (calc). TD at 9407'.

Bough 'C' completion was attempted at 9356' – 9374' and subsequently abandoned. Coastal set a CIBP at 9300' with 20' of cement on top, perf/sqzd at 4490' with 150 sacks of cement and ran a CBL finding cement at 4150' – 4940'. Well was then perforated/acidized at 4502' – 4518' and completed as a San Andres oil well in February, 1964.

On March 1, 1997, Southwest Royalties, Inc become the operator of record. Production has declined to less than 2 BOPD. Southwest Royalties, Inc desires to now convert this well to water injection to optimize offset production within the pattern.

Well Data

Data obtained from records maintained by the operator and NMOCD.

Well spudded on 5/14/1974 by Coastal States Gas Producing Company as a San Andres oil well.

8-5/8" 24# casing was set in 11" hole at 408'. Cemented with 300 sacks of cement. Cement circulated to surface.

4-1/2" 14.8# casing was set in 7-7/8" hole at 4449'. Cemented with 250 sacks of cement. Cement did not circulate. Top of cement at 3150' (calc). TD at 4449'.

Casing was perforated/acidized at 4354' – 4422' and completed as a San Andres oil well in May, 1974.

On March 1, 1997, Southwest Royalties, Inc become the operator of record. Production has declined to less than 2 BOPD. The well was shut in during July, 2015. During 2017, Southwest Royalties received approval to plug the well, but now desires to instead convert this well to water injection to optimize offset production within the pattern.

Well Data

Data obtained from records maintained by the operator and NMOCD.

Well spudded on 12/23/1971 by Coastal States Gas Producing Company as a San Andres oil well.

8-5/8" 24# casing was set in 11" hole at 370'. Cemented with 250 sacks of cement. Cement circulated to surface.

4-1/2" 9.5# casing was set in 7-7/8" hole at 4370'. Cemented with 200 sacks of cement. Cement did not circulate. Top of cement at 3211' (calc). TD at 4370'.

Casing was perforated/acidized at 4354' – 4422' and completed as a San Andres oil well in Jan, 1972.

On March 1, 1997, Southwest Royalties, Inc become the operator of record. Production has declined to less than 1 BOPD. The well was shut in during July, 2015. Southwest Royalties desires to convert this well to water injection to optimize offset production within the pattern.

Legal Notice

Southwest Royalties, Inc., P. O. Box 53570, Midland, TX 79710 has filed a Form C-108 (Application for Authorization to Inject) with the Oil Conservation Division seeking administrative approval to expand its Flying M San Andres Field Pressure Maintenance Project by converting the three wells noted below from producing oil wells to water injection wells. Injection would be into the San Andres formation (Flying M San Andres Pool) through perforated intervals as noted below:

- 1) Flying M SA Unit #131, API 30-025-20551 located 1978' FNL x 1993' FWL, Unit Letter F, Section 21, T9S, R33E, Lea County, New Mexico, injection interval 4458' to 4518'
- 2) McGuffin #3, API 30-025-24694 located 660' FNL x 1980' FWL, Unit Letter C, Section 29, T9S, R33E, Lea County, New Mexico, injection interval 4354' to 4422'
- 3) Gonzales 31 Federal #2, API 30-025-24004 located 1980' FNL x 660' FEL, Unit Letter H, Section 31, T9S, R33E, Lea County, New Mexico, injection interval 4261' - 4294'

Injected fluid would be produced water from San Andres producing oil wells in the project area. Anticipated injection rates would be 300 BWPD with a maximum rate of 600 BWPD per well. Anticipated injection pressure would be 500 psi with a maximum pressure of 800 psi. These wells are located approximately 12 miles northeast of Caprock, New Mexico.

All interested parties opposing the aforementioned must file objections with the New Mexico Oil Conservation Division, 1220 South St. Francis Drive, Santa Fe, New Mexico 87505 within 15 days. Additional information can be obtained by contacting Danny Holcomb at 806-471-5628.
