

Northwest Shelf Yeso Play

• Yeso production extends across the Northwest Shelf, in close proximity to the shelf margin.

• Operators typically drill through the Paddock and Blinebry, complete both, and commingle the production.

• Marbob (now Concho) has drilled numerous wells in the Burch Keely Unit that overlie the Grayburg Deep Unit and produce from the upper part of the Paddock.

• Development of the Paddock occurs within and adjacent to the Burch Keely Unit (red dots show Paddock producers).

• However, the Blinebry is not being developed within the Burch Keely Unit.
