3. In Order No. R-10067-D, dated September 22, 2011, the Commission vertically extended the Grayburg-Jackson (Seven Rivers-Queen-Grayburg-San Andres) Pool to correspond with the Unitized Formation of the Burch Keely Unit which is from the top of the Seven Rivers formation to a depth of 5,000 feet below the surface.

4. In Case No. 14670, Concho applied to contract the Grayburg Jackson Pool within the Burch Keely Federal Unit to vertically extend from the top of the Seven Rivers to the top of the Glorieta formation. Concho has also requested the creation of a new pool which would

extend from the top of the Glorieta formation to a depth of 5000 feet (proposed to be named the Burch Keely Glorieta-Yeso Pool). That matter was heard on September 29, 2011 and is under advisement with the Division.

5. The Grayburg Jackson Pool is governed by Division Rule 19.15.15.9 NMAC which provides that a 40-acre spacing unit may contain up to four oil wells.

6. Concho requests an exception to the Division well density rule to increase well density to allow up to 4 wells completed in the Paddock member and 4 wells in the Blinebry member of the Glorieta-Yeso formation.

7. Concho believes this spacing is necessary for incremental recovery.

8. Exhibit A to this application is a list of affected person as defined by Division Rules. Concho has given notice to the listed parties in accordance with Division Rules.

9. Approval of this application will result in the production of hydrocarbons which otherwise will not be produced and will be in the best interest of conservation and the protection of correlative rights.

WHEREFORE, COG Operating LLC requests that this application be set for hearing before an Examiner of the Oil Conservation Division on November 10, 2011, that notice be given as required by law and the rules of the Division, and that the application be approved.

Respectfully submitted,

HOLLAND & HART, LLP
