**Re: CASE NO. 15519; APPLICATION OF MEWBOURNE OIL COMPANY TO
REVOKE THE INJECTION AUTHORITY GRANTED UNDER SWD-744
FOR THE WILLOW LAKE WELL NO. 1 OPERATED BY PYOTE WELL
SERVICE, LLC, EDDY COUNTY, NEW MEXICO**

Dear Mr. Catanach:

Enclosed for filing is an original and one copy of our Motion to Stay Order No. R-14300 on behalf of David Baker, Receiver for the benefit of Pyote Water Solutions LLC and Pyote SWD II LLC. The motion seeks a stay of the referenced order which directs the cessation of disposal operations into the referenced well by April 1, 2017. In view of the imminence of that date, we respectfully request your expedited consideration of the motion.

Thank you.

Very truly yours,

J. Scott Hall

**STATE OF NEW MEXICO
DEPARTMENT OF ENERGY, MINERALS AND NATURAL RESOURCES
OIL CONSERVATION DIVISION**

APPLICATION OF MEWBOURNE OIL COMPANY TO REVOKE THE INJECTION AUTHORITY GRANTED UNDER SWD-744 FOR THE WILLOW LAKE WELL NO. 1 OPERATED BY PYOTE WELL SERVICE, LLC, EDDY COUNTY, NEW MEXICO.

**CASE NO. 15519
ORDER NO. R-14300**

MOTION TO STAY ORDER NO. R-14300

David Baker, Receiver for the benefit of Pyote Water Solutions LLC and Pyote SWD II LLC ("Receiver"), by their undersigned attorneys, Montgomery and Andrews, P.A., moves pursuant to Rule 19.15.4.23B NMAC that the Division Director enter an order staying Order No. R-14300 pending (1) a remand to the Division to review and approve an amendment of the movant's injection permit, or (2) a hearing *de novo* and issuance by the Oil Conservation Commission of its order in this matter.

Introduction

By its order issued on February 21, 2017 after an Examiner hearing held on September 16, 2015, the Division directed the operator to discontinue disposal into the Willow Lake Well Com No. 1 (API No. 30-015-21499) ("Willow Lake SWD") by April 1, 2017 at which time the injection authorization under SWD-744 is to terminate. A stay is necessary to prevent gross negative consequences to the well operator and interest owners of the lands and to the transporters and operators in the vicinity who will be deprived of disposal services. A stay will also permit the operator to take remedial measures following the recent conduct of a radioactive tracer survey which identifies the depths of perforations and the zones that are and are not taking volumes of injected water. The results of the tracer survey show that all injected fluid is going into a shallower interval (7,184 – 7,224 feet) than the Bone Spring formation production in the

area (7,900 – 8,300 feet). The operator has filed a new C-103 that notes the actual open perforations and attaches the tracer survey log. The operator will also apply for Division approval to isolate the potentially productive members of the Bone Spring formation by placement of a bridge plug substantially above those depths at 7,600 feet. The Receiver and operator will then seek Division or Commission approval for an amendment of Order SWD-744 to contract the permitted injection interval from 7,184 – 8,850 feet to 7,184 – 7,550 feet. A stay will allow the Division or the Commission to consider the newly available information establishing that injection operations at these shallower depths do not adversely affect potential Bone Spring production. A stay will also permit the proposed remedial actions to be put into place and will avoid disruption of disposal services. As grounds for this motion, the Receiver states:

Background Facts

As permitted by the Division under SWD-744 issued on May 11, 1999, Griffin Petroleum Company was authorized to inject into the Bone Spring formation from intervals from approximately 7,148 feet to 8,850 feet. Griffin Petroleum Company was succeeded by Mesquite SWD in 2005 and subsequently by Pyote Well Service, LLC in 2013. Recently, the Receiver removed Pyote Well Service, LLC as operator and has replaced that entity with Cambrian Management LTD who has assumed operations of the Willow Lake Com Well No. 1.¹

The Willow Lake SWD facility receives produced water by truck and by pipeline from a significant number of trucking companies, well operators and midstream facilities. (*Customer Operator Spreadsheet, Ex. 1*). The spreadsheet identifies the numerous customers that are delivering water to the Willow Lake

¹ As noted, this asset is among some 28 wells now under operational control by a receiver appointed by a United States District Court. The Receiver's primary obligation is to preserve the assets under his supervision. As soon as it was practicable, the Receiver terminated Pyote Well Services as the operator of record for every one of the assets. The new operator, Cambrian, is working diligently to address numerous issues, not the least of which is addressing various regulatory shortcomings for operation of these assets.

SWD facility along with the well operators (including Mewbourne and Oxy) and the scores of leases or wells served for the period of January 2016 through February 2017. For this period, monthly disposal volumes average approximately 50,000 barrels of water per month.

Why a Stay is Necessary

The gross negative consequences of the abrupt loss of operations revenues to the Receiver and the well owners is self-evident. In addition, the Receiver and well owners are faced with the loss of a permitted property right.

The sudden unavailability of the Willow Lake SWD facility will result in significant disruption for the pipelines, water haulers and producing operators in an area of high demand for disposal capacity, but with limited disposal facilities. As demonstrated by the attached map, it is evident that disposal capacity in the area of ongoing development is already constrained. (*Area Disposal Well Map and tabulation, Ex. 2.*) There are no commercial disposal facilities within a three mile radius of the Willow Lake SWD and only two within a five mile radius, one of which is another Bone Spring injector in the Willow Lake Bone Spring Pool at depths of 7,287 – 7,740 feet: *Endeavor State MA Com. SWD No. 1 (API No. 30-015-23709), SE/4 NE/4 Section 3, Township 25 South, Range 28 East, NMPM, Eddy County, New Mexico. (Tabulation, Ex. 2.)*

In Order No. R-14300, the Division noted the actual perforated intervals for the Willow Lake Well No. 1 were apparently not reported post-completion by the operator who originally perforated the well and the depths of opened perforations not known with certainty at the time of the hearing. Order No. R-14300, Findings ¶11(C) ((February 21, 2017). Those depths are now known and have been reported to the Division with a C-103, bringing the well into reporting compliance. The Receiver and the new operator of the Willow Lake SWD facility have conducted a radioactive tracer survey to determine (1) the locations

of the open perforations and (2) the proportions of water being taken by specific intervals within the Bone Spring formation and (3) correlate them to those zones known to be non-productive or productive elsewhere. With this information, it is anticipated that the operator will be able to take steps to isolate perforations located within correlating productive intervals and keep injection operations contained to the non-productive intervals.

On recommendation by the Receiver's consulting petroleum engineering firm, the operator will seek Division approval to install a cast iron bridge plug at the depth of 7,600, topped with a column of cement. This will allow for the permitted injection interval to be contracted to depths of 7,184 – 7,550 and will assure containment of disposal fluids from the producing intervals in the area found at depths of 7,900 – 8,300 feet. (*Affidavit of Rick Johnston, Ex. 3.*)

There is no evidence in the record and no finding in Order No. R-14300 that ongoing injection operations will lead to the likelihood of harm to the environment or contamination of clean water supplies and there is no provision directing that the well be plugged. Neither is there *conclusive* evidence that injected water has extended to the nearest offsetting Bone Spring producers. Rather, the testimony and evidence from the Examiner hearing only establishes that, based on radial flow calculations, there have been insufficient volumes of water historically injected which would support the extension of a plume any further than 1,038 feet away from the Willow Lake SWD wellbore -- far short of any existing offset producer. (*Transcript excerpt, pgs. 150, L2-151, L9, Ex. 4*). Based on the results of the tracer survey, it is now known that the plume is located shallower than Bone Spring production in the area.

WHEREFORE, David Baker, Receiver requests that the Division Director enter a stay of Order No. R-14300. A proposed order of stay is attached. (*Order, Ex. 5*).

Respectfully submitted,
MONTGOMERY & ANDREWS, P.A.

OIL CONSERVATION DIVISION**

**APPLICATION OF MEWBOURNE OIL COMPANY TO REVOKE THE INJECTION AUTHORITY
GRANTED UNDER SWD-744 FOR THE WILLOW LAKE WELL NO. 1 OPERATED BY PYOTE
WELL SERVICE, LLC, EDDY COUNTY, NEW MEXICO.**

**CASE NO. 15519
ORDER NO. R-14300**

AFFIDAVIT OF RICK JOHNSTON

**STATE OF TEXAS)
) ss.
COUNTY OF TRAVIS)**

Rick Johnston, being duly sworn, states:

1. I am over the age of 21 and am otherwise competent to testify to the matters set forth herein of which I have personal knowledge.
2. I am a petroleum engineer and principal with Johnston & Cloud a consulting petroleum engineering firm located in Austin, Texas. Among other areas, I am familiar with the Willow Lake COM Well No. 1 in Section 22, Township 24 South, Range 28 East, NMPM in Eddy County, New Mexico. I am also familiar with the lands, area development and geology in the vicinity. My credentials as an expert petroleum engineer were accepted by the NMOCD's Examiner at the September 29, 2016 hearing in this matter.
3. My analysis of the Injection Profile Log run in the Willow Lake COM # 1 on March 18, 2017 shows that all injected fluid is entering the Bone Spring formation in the depth range of 7184-7224' and that no fluid is being injected below 7230'. The log shows

there is no fluid movement in the wellbore below 7230' all the way down to 9014' which is the current plug back depth for the well. The log was run while injecting fluid into the well at a rate of approximately 2966 barrels per day. The log also shows there is no behind pipe channeling of fluid, nor any packer leakage. It is my understanding the log is being filed with NMOCD.

4. Based on my review of well completion reports, directional surveys from horizontal wells, and well logs from wells in the area, the wells producing from the Bone Springs formation in the vicinity of the Willow Lake COM # 1 produce from the depth range of 7900 to 8300' with some perhaps deeper. Based on the results of the tracer survey, the injection of fluids through the Willow Lake Com #1 is occurring shallower than Bone Spring production in the area.

5. In consultation with the operator of the Willow Lake Well COM #1, I have recommended that a cast iron bridge plug be installed in the well at a depth of 7,600 feet. A bridge plug at this depth will assure containment of disposal fluids within an injection interval of 7184-7550' and isolating the producing Bone Spring formation intervals.

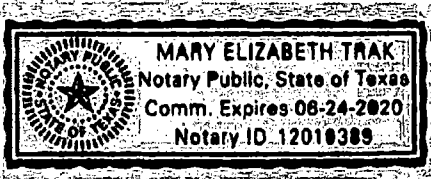

6. We prepared the map showing active disposal wells in the vicinity of the Willow Lake COM # 1. This map shows there are two active commercial disposal wells slightly over 3 miles from the Willow Lake COM # 1, one of which is permitted for disposal in the Bone Springs formation with a permitted disposal interval of 7287-7740' (API # 30-015-23709). If the disposal permit for the Willow Lake COM # 1 is cancelled, the water that is currently pipelined to the Willow Lake well will have to be trucked to one of the active commercial disposal wells shown on the map.

FURTHER AFFIANT SAYETH NOT.

Rick Johnston

Subscribed, sworn to and acknowledged before me on this 23RD day of March, 2017, by Rick Johnston.

EDDY COUNTY, NEW MEXICO.

CASE NO. 15519

REPORTER'S TRANSCRIPT OF PROCEEDINGS

EXAMINER HEARING

September 29, 2016

Santa Fe, New Mexico

BEFORE: MICHAEL McMILLAN, CHIEF EXAMINER
WILLIAM V. JONES, TECHNICAL EXAMINER
DAVID K. BROOKS, LEGAL EXAMINER

This matter came on for hearing before the
New Mexico Oil Conservation Division, Michael McMillan,
Chief Examiner, William V. Jones, Technical Examiner,
and David K. Brooks, Legal Examiner, on Thursday,
September 29, 2016, at the New Mexico Energy, Minerals
and Natural Resources Department, Wendell Chino
Building, 1220 South St. Francis Drive, Porter Hall,
Room 102, Santa Fe, New Mexico.

1 barrels.

2 Q. (BY MR. HALL) Have you conducted an
3 evaluation -- have you calculated the volumes of
4 injection fluids that would be required in order for an
5 injection plume to reach the OXY Stent well?

6 A. Yes.

7 Q. Tell us what you did.

8 A. Well, what I did was I went and looked at my
9 cross section, Exhibit 4, and I looked at only the upper
10 perforated interval. And I went and I calculated -- or
11 I counted the number of feet of clean sand that's
12 exhibited in those upper sets of perforations, and it
13 looks to me like it would be in excess of 120 feet.
14 Using a porosity of 12 percent and a radius of 5,280
15 feet, for the fluid front to have gone out 5,280 feet,
16 120 feet thick, 12 percent porosity, we would have had
17 to have injected 224 million barrels of water. We
18 haven't done that.

19 You know, the flip side of that is we've
20 injected 8.7 million barrels. Using 120 feet, 12
21 percent porosity, that is a plume of about 1,038 feet,
22 assuming radial flow, piston-like displacement.

23 This analysis of water and saying that he
24 sees some variation in the analysis that has to be from
25 the Willow Lake well, I don't think it goes around.

1 Q. You calculated an injection plume. Did you
2 presume that water was passing through each of the
3 perforations shown on the log for the Willow Lake well?

4 A. No. Only the upper set of perforations.

5 Q. All right. What do you conclude with respect
6 to whether or not injection operations are resulting in
7 waste or the prevention [sic] of correlative rights?

8 A. I don't believe that the evidence that we have
9 thus far is conclusive that that's occurring.

10 Q. All right. Are there other methods for testing
11 for water intrusion that have not been conducted by
12 either party in this case?

13 A. Yes.

14 Q. Name some, please.

15 A. The simple thing is to put a trace element in
16 the water that's being injected into the Willow Lake
17 well and then analyze the OXY Stent-produced water to
18 see if that trace element shows up. There's been some
19 allegation that may be happening in the Matador Tiger
20 well. Maybe analyze that well, too. But that's
21 probably the best way to do it, and I've seen that done
22 a handful of times.

23 Q. All right. And I'm sure the Examiners know
24 this. Tell them what a spinner survey is.

25 A. A spinner survey is a tool with -- that has, so

1 to speak, a propeller on it with a cage around it.
 2 While you're injecting into the well, you run that into
 3 the well and you look at how fast it's turning as a
 4 function of depth. And as you go past the set of
 5 perforation that's taking fluid, the propeller is going
 6 to slow down. So by analyzing the speed as a function
 7 of depth, you can figure out where the water is going.

8 Q. And that's not been done in this case as far as
 9 we know?

10 A. No.

11 Q. And would that allow us to determine whether
 12 all of these perforations have, in fact, been opened and
 13 FD levels reported?

14 A. Well, what it would tell you is, snapshot in
 15 time when you run the survey, what's taking water. As
 16 far as the issue of what's been perforated, the
 17 application for the disposal permit was filed by
 18 Griffin. He told the OCD where he was going to
 19 perforate it. He's the one that went in and completed
 20 the well and operated it for a number of years before he
 21 sold it to Mesquite. So I tend to believe that probably
 22 the well is perforated as reflected on the application.

23 Q. All right. Anything further with respect to
 24 your testimony or exhibits?

25 A. I don't believe so.

EXHIBIT 5

**STATE OF NEW MEXICO
DEPARTMENT OF ENERGY, MINERALS AND NATURAL RESOURCES
OIL CONSERVATION DIVISION**

**APPLICATION OF MEWBOURNE OIL COMPANY TO REVOKE THE INJECTION
AUTHORITY GRANTED UNDER SWD-744 FOR THE WILLOW LAKE WELL NO. 1
OPERATED BY PYOTE WELL SERVICE, LLC, EDDY COUNTY, NEW MEXICO.**

**CASE NO. 15519
ORDER NO. R-14300**

ORDER OF THE DIVISION

This matter came before the Division Director on the Motion To Stay Order No. R-14300 filed on behalf of David Baker, Receiver for the benefit of Pyote Water Solutions LLC and Pyote SWD II LLC pursuant to 19.15.4.23B NMAC of the Division's Rules.

NOW, on this ____ day of March 2017, the Division Director, on consideration of the Motion and the materials submitted therewith and otherwise being duly advised,

FINDS THAT:

(1) The Division Director has jurisdiction of the matter pursuant to *inter alia* Rule 19.15.4.23 and is authorized to grant a stay if necessary to prevent waste, protect correlative rights, protect public health or the environment or prevent gross negative consequences to an affected party.

(2) On February 21, 2017, after hearing, the Division entered Order No. R-14300 in this case.

(3) The Receiver, through Cambrian Management LTD is the operator of the Willow Lake Well No. 1 identified in Order No. R-14300, and as such is an "affected party" within the meaning of Rule 19.15.4.23B.

(4) On March 22, 2017, the Receiver filed an Application for Hearing De Novo and the matter is scheduled before the New Mexico Oil Conservation Commission on May 18, 2017.

(5) Order No. R-14300 revokes authority to inject into the Willow Lake Well previously approved by the Division in Order SWD-744. SWD-744 allowed disposal into the Bone Spring formation from 7184 feet to 8850 feet. Order No. R-14300 provides, among other matters, as follows:

(a) Pursuant to the application of Mewbourne Oil Company, Administrative Order SWD-744 with its authority for injection is hereby revoked.

(b) The Division designated operator (or David Baker as appointed receiver) of the Willow Lake Com Well No. 1 (API No. 30015-21499), the subject

SWD well, is hereby ordered to cease disposal into this well prior to April 1, 2017 at which time Administrative Order SWD-744 shall no longer be in effect.

(c) Any disposal into the subject SWD well after April 1, 2017 will be considered as a violation by the operator (and by David Baker as receiver) of the New Mexico Underground Injection Control program and the federal Safe Drinking Water Act. Further disposal will also be considered a knowing and willful violation of a Division order.

(d) Jurisdiction of this case is retained for the entry of such further orders as the Division may deem necessary.

(6) The Receiver contends that the termination of injection on April 1, 2017 will result in gross negative consequences to the SWD well operator and owners in the form of loss of revenues as well as the deprivation of a permitted property right.

(7) The Receiver also contends that cessation of injection operations will result in the elimination of needed disposal capacity in an area of high demand, causing disruption to significant numbers of pipeline operators, trucking companies, midstream facilities, and lease and well operators in the vicinity of the Willow Lake Com Well #1. The Receiver presented evidence that commercial disposal capacity in the area is limited and there are few options for transporters and operators. There are no commercial disposal facilities within a three mile radius of the well and only two within a five mile radius. One of those wells is injecting into the Bone Spring formation.

(8) Evidence before the Division at hearing of the effect of injection operations through the Willow Lake Com Well #1 on offsetting wells producing from the Bone Spring formation was not *conclusive*. In this regard, the Receiver directed the operator of the Willow Lake Com Well #1 to conduct a radioactive tracer survey to determine the depths of open perforations and the zones that are and are not taking volumes of injected water. The tracer survey injection profile log has been included with a C-103 and is now on file with the Division.

(9) The evidence provided with the Motion to Stay includes an analysis of the tracer survey by the Receiver's consulting petroleum engineer. The analysis of the Injection Profile Log run in the Willow Lake COM # 1 on March 18, 2017 shows that all injected fluid is entering the Bone Spring formation in the depth range of 7184-7224' and that no fluid is being injected below 7230'. The log shows there is no fluid movement in the wellbore below 7230' all the way down to 9014' which is the current plug back depth for the well. The log was run while injecting fluid into the well at a rate of approximately 2966 barrels per day. The log also shows there is no behind pipe channeling of fluid, or any packer leakage.

(10) Well completion reports, directional surveys from horizontal wells, and well logs from wells in the area establish that the wells producing from the Bone Springs formation in the vicinity of the Willow Lake COM # 1 produce from the depth range of 7900 to 8300' with some perhaps deeper. Based on the results of the tracer survey, the injection of fluids through the Willow Lake Com #1 is occurring shallower than Bone Spring production in the area.

(11) The operator of the Willow Lake Com # 1 is seeking Division approval to install a cast iron bridge plug at the depth of 7,600, topped with a column of cement. This will allow for the permitted injection interval to be contracted to depths of 7184 – 7550' and will assure containment of disposal fluids from the producing intervals in the Bone Spring formation in the area.

(12) The receiver will also seek an amendment to Order SWD-744 to contract the permitted injection interval from 7184 – 8,850' to 7184 – 7550'.

(13) With the filing of the tracer survey log with the Division, all known open perforations are now of record and the Willow Lake Com # 1 is now in reporting compliance.

(14) When the Division entered Order No. R-14300, evidence of the depths of open perforations post-completion was not available and the radioactive tracer survey had not been conducted. At that time, the depths of specific intervals within the vertically larger permitted injection interval that were or were not taking disposal fluids were not known.

(15) The evidence presented in support of the Motion To Stay now establishes that disposal into the "gross Bone Spring interval" was not occurring and that it is *unlikely* that offsetting production in specific sands was affected. *See* Order No. R-14300, Findings ¶ 15 (February 21, 2017).

(16) Order R-14300 contains no provision directing that the Willow Lake Com # 1 well be plugged and abandoned. The proposed implementation of remedial measures based on the results from the tracer survey is reasonable and will serve to prevent waste and protect correlative rights. The availability of the results from the tracer survey and consideration of remedial measures will allow the Division and Commission to make a more fully informed decision.

(17) The Applicant did not assert and there is no evidence of any immediate threat of environmental harm from injection operations through the Willow Lake Com Well #1.

(18) Granting the motion to stay will avoid the gross negative consequences that would result from the disruption of area disposal services, loss of revenues and loss of a permitted property right by the Receiver and operator.

(19) The termination of authority to inject specified in Order No. R-14300 should be stayed pending the issuance by the Oil Conservation Commission of its order following hearing *de novo* in this matter.

IT IS THEREFORE ORDERED THAT:

(1) Order No. R-14300 is stayed pending the issuance by the Oil Conservation Commission of its order following hearing *de novo*.

(2) The Receiver and operator shall promptly submit for approval by the Division of the proposed installation of a bridge plug at a depth of 7,600 feet in the Willow Lake Com # 1 well and shall report the completion of that work. At such time, injection operations shall be authorized

to resume. Thereafter, the Receiver and operator will seek an amendment to Order SWD-744 contracting the permitted disposal interval to 7,184 – 7,550 feet.

(3) Jurisdiction of this case is retained for the entry of such further orders as the Division may deem necessary.

DONE at Santa Fe, New Mexico, on the day and year hereinabove designated.
