Subject: FW: Fasken call - suggestion

Don, we have been contacted by Fasken for completion information on one of our wells. Their well needs to be plugged or recompleted. Would you call Sally and see if they would be interested in a farmout request from us on this lease? I know it's a longshot but before we tell them how to complete their well we might offer to do them a favor and take it over. This is the E/2 of Section 31, 19-34, their Ling Federal # 1 well. We would be interested in drilling a Morrow well in the SE/4 and drilling Bone Spring in the NE/4.

Carl Brown says Fasken is doing a recomp on their well in Sec 31, into the zone they think we are in, 9508-9563 in our well. They think they look poorer than we do, but the OCD is on their case to recomplete or plug, so we will not deter their testing plans.

Best I can tell, our well kicked in July 2004 when we pumped 155 gal Toluene/xylene in and put back on pump; was that the secret? I can also tell him to look closer in the OCD files to see current perms are 9376-9604.

Is that OK with you, Ralph?

Carl Brown with Fasken left a message asking about the Mescalero 30-1 work in the Bone Spring. He said that our work was not clear in the NMOCD records. How would you like for me and Dave to handle this situation as I know you are working a deal on the acreage to the south?

Thanks,

Chad McGehee

Sally, just wanted to follow up our telephone conversation and say that I enjoyed visiting with you and that if y'all change your mind about Section 31, please keep Cimarex in mind as we would certainly like to pursue our ideas in that area. Also, when we got off the phone, I called Carter and we got caught up on the last several months. He said that both he and his wife were healthy and that was great to hear. Take care. don
