

**FORM C-108 APPLICATION
GREAT WESTERN DRILLING COMPANY
SOUTH CARTER SAN ANDRES WATERFLOOD PROJECT**

III. WELL DATA

- B.
- (1) The name of the injection formation and, if applicable, the field or pool name.
 - (2) The injection interval and whether it is perforated or open-hole.
 - (3) State if the well was drilled for injection or, if not, the original purpose of the well.
 - (4) Give the depths of any other perforated intervals and detail on the sacks of cement or bridge plugs used to seal off such perforations.
 - (5) Give the depth to and name of the next higher and next lower oil or gas zone in the area of the well, if any.

Since the information in item (2) is on the wellbore schematic, it will be omitted. Other items that are common to all the proposed injection wells will be grouped.

Effie Carter #2, Sylvester Johnson #3, & McQueen #2:

- (1) San Andres formation, Carter, South (San Andres) Field.
- (2) On Schematic(s).
- (3) Originally drilled as an oil producer in the San Andres.
- (4) No other perforated or open-hole intervals, other than those listed on the schematic(s).
- (5) There are no productive oil or gas zones above or below the proposed injection interval.

Effie Carter #3 & S.P. Johnson #2:

- (1) San Andres formation, Carter, South (San Andres) Field.
- (2) On Schematic(s).
- (3) Originally drilled as an oil producer in the San Andres.
- (4) No other perforated or open-hole intervals, other than those listed on the schematic(s).
- (5) Within the 1/2 mile area of these wellbores is the Blackwood & Nichols Carter #1, which was perforated in the interval 5822'-5837' (Glorieta). This is the next lowest producing zone in the area of these proposed injectors. The B&N Carter #1 never established commercial production and was subsequently plugged and abandoned. There are no known producing zones above the injection interval within the area of this proposed injector.
