Re: **Well Proposal
W/2 Section 6,
T25S-R37E
Lea County, NM
Custer Wells Prospect**

*is still
negotiating*

Dear Ron:

Logro Corporation has acquired the interest of Meridian Oil Company in the Custer Wells #1 located 1810' FNL & 2164' FWL of the captioned section 6. The well has not produced since August, 1991. In order to reestablish production from the well Logro proposes that its partner, Naumann Oil & Gas, Inc., deepen the well to 10,160' and attempt a completion in the Devonian formation. The well was originally drilled on a N/2 unit to 12,964' and plugged back to 9,594'. We believe that a W/2 unit is appropriate for the Devonian formation. The attached AFE details the estimated cost of \$101,200.00.

Logro Corporation hereby solicits your participation in the above described deepening. In the alternative, subject to approval of title and commencement of operations, Logro is willing to assume your position in the well and leases in exchange for assuming your plugging liabilities.

Your prompt and favorable response will be appreciated as we hope to commence operations as soon as possible. Please do not hesitate to call should you have any questions.

Very truly yours,

David N. Frye, CPL

RECOMPLETION PROCEDURE

December 7, 1994

1. Move in and rig up Completion Unit. Kill well and load hole with brine water. Nipple down wellhead, nipple up Blow Out Preventer.
2. Unseat packer. Trip out of hole and lay down packer. Pick up additional tubing and trip in hole with fishing tools. Latch and trip out of hole with fish (Vann Gun).
3. Pick up and trip in hole with mill, drill collars and tubing to PBTD @ 9,594'. Drill out cement and CIBP. Trip in hole to 10,200' circulate hole clean, trip out of hole and lay down bottom hole assembly.
4. Trip in hole with 7" x 2 7/8" packer and tubing to 10,000' and set packer. Pressure test tubing to 1,000#. Nipple down BOP and nipple up wellhead.
5. Rig up swab unit and swab fluid level down to 9,000'. Rig down swab.
6. Rig up wire line and run GR/CCL and GR/CNL. Perforate Devonian @ 10,142' - 162' with tubing conveyed perforating charges.
7. Flow and / or swab test.
8. If necessary acidize with 2,000 - 6,000 gal of NeFe acid.
9. Flow and / or swab test.
10. If production is established set surface facilities and connect to gas sales pipeline.
