Case 11532

Amoco Production Company hereby makes application for exception to NMOCD general rule 303(A) to permit surface commingling of production from the wells and pools referenced above. These wells are located in Unit N Section 7-T29N-R9W, San Juan County, New Mexico. In support of this application, Amoco states the following:

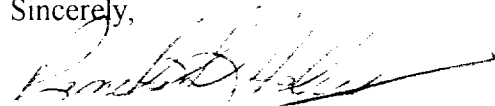

1. Amoco is the operator of the Blanco Pictured Cliffs Pool underlying part of the west half of Section 7-T29N-R11W (177.18 Acres) currently dedicated to the Sammons Gas Com D#1 well. (See Attached C-102)
2. Amoco is the operator of the Basin Dakota Pool underlying Section 7-T29N-R11W (331.68 Acres) currently dedicated to the Sammons Gas Com C#1 well. (See Attached C-102)
3. Amoco is the operator of the Blanco Mesaverde Pool underlying Section 7-T29N-R11W (331.68 Acres) currently dedicated to the Sammons Gas Com B#1A well. (See Attached C-102)
4. The ownership (WI, RI, ORRI) is not common for the pools which are proposed for surface commingling.
5. Surface commingling will offer an economical method of production using a single train of production equipment and compression.

6. The actual commercial value of the commingled production will not be less than the sum of the values of the production from each of the common sources of supply.
7. Approval of this application will otherwise be in the best interest of conservation, the prevention of waste, and the protection of correlative rights.

Amoco requests that this application be set for examiner hearing of the Oil Conservation Division on May 16, 1996. A copy of this application will be sent to offset operators and to owners in the well (WI, RI, ORRI) by certified mail, return receipt requested. These wells are on lands involving federal lease numbers SF-076337 and SF-080751 and a copy of the application will be sent to the Bureau of Land Management. **We request that the NMOCD publish this case with the comment that in the absence of objection, this case will be taken under advisement.**

Should you have questions regarding this application, do not hesitate to call me at (303) 830-5344.

Sincerely,

Pamela W. Staley

NEW MEXICO OIL CONSERVATION COMMISSION
WELL LOCATION AND ACREAGE DEDICATION PLAT

Form C-102
Supersedes C-121
Effective 1-1-67

All distances must be from the outer boundaries of the Section

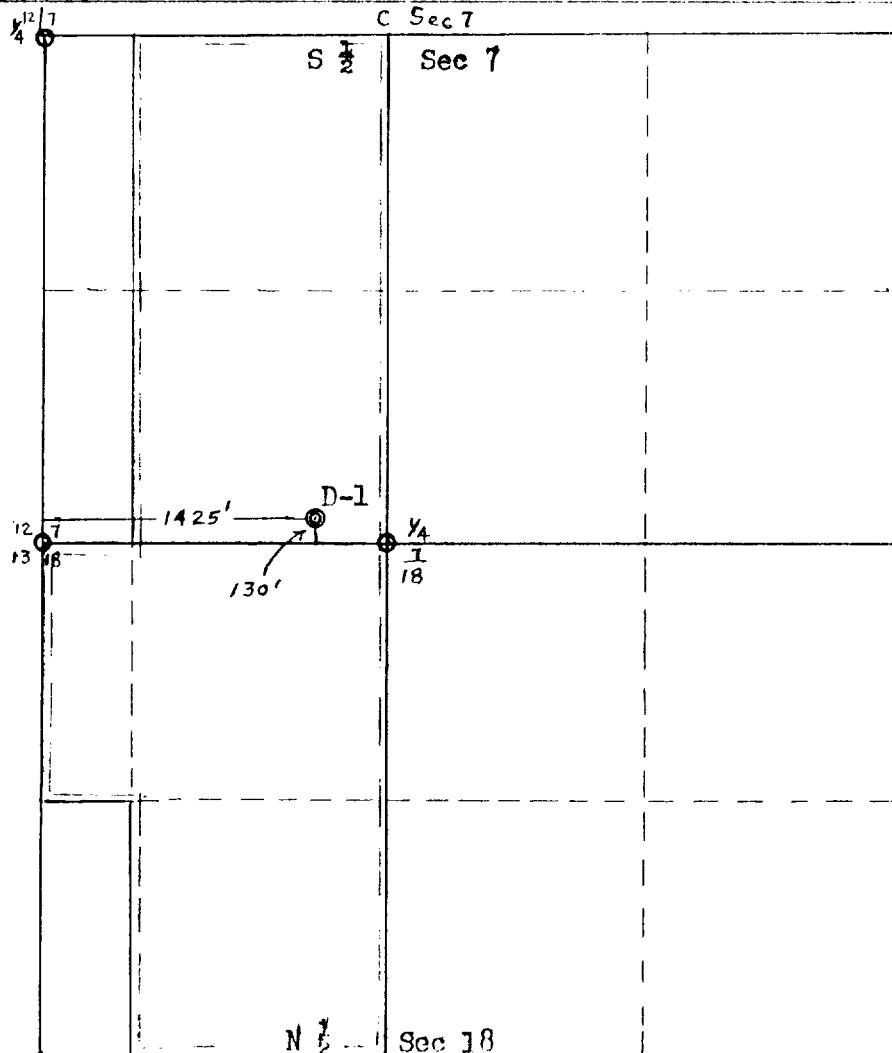

Operator Amoco Production Company			Lease Sammons Gas Com		Well No. D-1
Unit Letter N	Section 7	Township 29N	Range 9W	County San Juan	
Actual Footage Location of Well: 130 feet from the South line and 1425 feet from the West line					
Ground Level Elev. 5788	Producing Formation Pictured Cliffs	Pool Blanco Pictured Cliffs		Dedicated Acreage: 177.18 Acres	

1. Outline the acreage dedicated to the subject well by colored pencil or hatchure marks on the plat below.
2. If more than one lease is dedicated to the well, outline each and identify the ownership thereof (both as to working interest and royalty).
3. If more than one lease of different ownership is dedicated to the well, have the interests of all owners been consolidated by communitization, unitization, force-pooling, etc?

☒ Yes ☐ No If answer is "yes," type of consolidation Communitization

If answer is "no," list the owners and tract descriptions which have actually been consolidated. (Use reverse side of this form if necessary.)

No allowable will be assigned to the well until all interests have been consolidated (by communitization, unitization, forced-pooling, or otherwise) or until a non-standard unit, eliminating such interests, has been approved by the Commission.

PROPOSED ALLOCATION METHOD

Currently, the Mesaverde is producing 165 MCFD and the Dakota is producing 94 MCFD. The Pictured Cliffs has been shut-in since March 1994 at which time it was producing 26 MCFD. The combination of these three wells results in an expected rate of at least 285 MCFD. The Sammons Gas Com B#1A has wellhead compression while the Sammons Gas Com C #1 is unable to buck line pressure. The Sammons Gas Com D#1 was tested last year with a portable compressor at 130 MCFD which is not sufficient to economically justify a separate compressor. Commingling the three Sammons wells would allow us to utilize a single compressor which would be otherwise impossible on a single well basis.

The recommended allocation for these wells would be based on annual well testing with a test performed prior to commingling the production.
