

# MARATHON OIL COMPANY

## COMPLETION STRATEGY

- Acidized Blinebry reservoir in stages
- Frac entire Blinebry interval in one stage
- Double amount of proppant pumped compared to “standard” Blinebry frac job to increase conductivity
- Utilize larger frac sand to increase fracture conductivity
- Utilize new Delta-frac borate gel fluid to maximize sand carrying capacity and placement as compared to 50-70 quality linear or crosslinked foams.
- Increased proppant pack conductivity due to improved gel cleanup from Delta-frac fluid and improved breaker technologies.
