BURLINGTON RESOURCES

SAN JUAN DIVISION

San Juan Basin
Dakota Operators
(See attached list)

**RE: San Juan Basin - Dakota Formation
Operators Meeting
Increased Density Study – Dakota Formation
San Juan Basin, New Mexico**

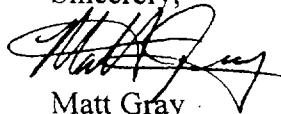

Dear Operator:

Burlington Resources Oil and Gas Company L.P. and Conoco Inc. are currently investigating the possibility of increasing the Dakota formation well density in the San Juan Basin. As you are aware, the current density of wells for the Basin Dakota pool is two (2) wells per 320-acre spacing unit. We propose increasing the density of wells to allow for up to four (4) wells per 320-acre spacing unit. Burlington and Conoco are currently conducting pilot projects to test the viability of increased density. These pilot projects are located in the San Juan 27-5 Unit, San Juan 28-7 Unit and in T-31-N, R-12-W. Upon completion of these pilot projects Burlington and Conoco plan to go to hearing before the NMOCD to recommend basin wide Dakota increased density.

Burlington and Conoco would like to have the support of other operators before we go to hearing. You are therefore invited to a San Juan Basin Dakota operators meeting to discuss the technical merits of this project. The meeting will be held in the Suns Room at San Juan College (4601 College Blvd., Farmington, New Mexico) on July 10th at 10:00 am. Please indicate on this ballot letter if you plan to attend this meeting and return to my attention.

If you have any questions regarding this matter, please contact the undersigned at (505) 326-9848.

Sincerely,

Matt Gray
Landman

xc: Tom Kellahin

I (We) plan to attend the Dakota increased density Operators Meeting on July 10, 2001. (Please indicate all names if more than one representative will be attending).

NM OCD will be holding a public meeting in rooms 9008-9010 of the Fine Arts Center at San Juan College on September 25th concerning an application for increased well density in the Basin Dakota Gas Pool. There are approximately 4900 Dakota wells in the San Juan basin at present that could ultimately be offset by new wells or completions. Notice is being sent to public, government and other organizations as well as to the operators of wells in the Basin Dakota Pool. This meeting will also be announced in the media.

Burlington Resources and Conoco Inc, who have conducted pilot tests to determine the effectiveness of downspacing the Dakota production, will make presentations.

Questions and comments will be accepted and are invited.

NM OCD will hold a hearing at a date sometime after this meeting to determine if the infill wells are necessary for proper drainage of the Dakota pool.

Thank you.
