```

## \*\*\*NOTES\*\*\*

The well was originally intended to be at 660' FNL & 1980' FEL, Sec. 32, T18S, R38E, Lea County Location was moved to 990' FNL & 1817' FEL, Same Sec., Township & Range Location was moved due to other surface facilities and equipment which interfered with the construction of a drilling location and setup of the drilling rig and associated equipment. The State A Tank Battery is located at 660' FNL & 1980' FEL.

The new location is outside of the Pool required 150' radius from the center of the 1/4 of the 1/4 To the best of my knowledge, no request for a Non-Standard Location was ever made. This well was drilled to produce the lower horizons since the #4 well was dedicated to the waterflood.
