

(Mr. Graham reads the notice of publication.)

R. S. BLYMN, having been first duly sworn, testified as follows:

DIRECT EXAMINATION

BY MR. WHITE:

Q Mr. Blymn, will you state your full name and position for the record, please?

A R.S. Blymn, engineer for the Oil Conservation Commission.

Q In your capacity as engineer for the Oil Conservation Commission, have you had occasion to make a study of proposed extensions and creations of new pools as read by Mr. Graham in this case, and if so, what are the result of your studies, and your recommendations?

A Yes, I have made a study of these proposed creations and extensions, and have prepared plats showing the proposed creations, and the proposed extensions. And I would like to make a recommendation that these various creations and extensions be adopted as advertised and as shown on these plats.

MR. GRAHAM: Mr. Blymn, with reference to paragraph (a), are there any contiguous lands around there that should be included other than as requested?

A There are none that need to be included at this time. In our opinion, that is all that should be included at this time.

MR. GRAHAM: And that statement would obtain as to these other numbered paragraphs?

A That is correct. That is section (b) (referring to a plat). You want them all at once?

MR. SPURRIER: Yes. These exhibits (a) to (i) having been offered in evidence, will be accepted without objection.

MR. WHITE: If the Commission please, the file fails to show where there has been any objection filed to the proposed order.

MR. SPURRIER: Is there any objection from anyone on these proposed extensions and these new pools? If not, the Commission will consider the extensions as recommended and will approve them and issue an order subsequently.
