Re: Limiting Gas-Oil Ratio  
Maljamar Paddock Pool,  
Lea County, New Mexico

Mr. Ralph Gray  
Buffalo Oil Company  
Carper Building  
Artesia, New Mexico

*Ex 762  
Case 376*

Dear Sir:

This will confirm your recent conversation with W. H. Mills, May 22, 1952, regarding the proposed removal of the New Mexico Oil Conservation Commission's limiting gas-oil ratio of 2000 cubic feet per barrel in so far as producing wells in the Maljamar Paddock Pool are concerned.

We are cognizant of the nature of the producing reservoir, realizing that with such a thin productive section and relatively low permeability, producing gas-oil ratios will of necessity be comparatively excessive when considering the amount of oil produced.

With this in mind, Kewanee Oil Company interposes no objection to your request to remove the limiting gas-oil ratio from the field rules adopted for the Maljamar Paddock Pool by the New Mexico Oil Conservation Commission.

Yours very truly,

*A. J. McGown*

A. J. McGown

Division Superintendent

AJM-WHM/jd

P. S. Your idea of producing Mitchell B-20-P during those periods where the incoming gas to the Maljamar Cooperative Plant is insufficient to operate the compressors at capacity is excellent and will no doubt increase the overall efficiency of plant operations.
