P. O. BOX 871

SANTA FE, NEW MEXICO

May 25, 1956

Mr. Frank E. Irby  
State Engineer's Office  
State Capitol  
Santa Fe, New Mexico

Dear Sir:

I have read your letter of this date over the telephone to Mr. Hanson, our Artesia representative, and he will give us a written report on the situation to which you have called our attention, in the matter of well cementing in Eddy County.

I appreciate very much your calling this to our attention.

Yours very truly,

A. L. Porter, Jr.  
Acting Secretary - Director

Gentlemen:

This is in answer to your letter of May 6, requesting that we provide you information concerning the amount of cement used in field cementing operations on our customers' wells in the state of New Mexico.

By contract with our customers we agree not to supply any information concerning the services performed on their wells without prior approval from them, except when the information must be supplied to a state organization as a requirement of law.

We will be happy to furnish you the information you require if you will obtain prior approval from our customers.

Very truly yours,

Attention: Mr. W. B. Macey, Secretary-Director

Gentlemen:

Your letter of May 6, 1955, addressed to the Halliburton Oil Well Cementing Company, B. J. Cementing Company and Denton Oil Well Cementing Company has been referred to me for reply.

I talked with our Mr. C. T. McGuire, Division Manager, at Lubbock, Texas, with reference to your problem and your suggestions as to its solution. Mr. McGuire fully concurred with you as to the necessity of protecting the oil and gas resources and surface water in wells being drilled and/or completed in New Mexico. In connection with your suggestion that the cementing company furnish you their monthly report showing the name of the operator, the well name and number, the size of casing and the amount of cement used, Mr. McGuire stated that, of course, as to the veracity of the well name and number and the size of the casing, Halliburton would have no information other than what was furnished Halliburton by the operator. Halliburton would know the quantity of cement it pumped into the well.

Through the years Halliburton has maintained the confidence of the operator relative to keeping as fully confidential information all data obtained by Halliburton on a well service job. The only variation and departure from such custom of non-disclosure of information has been where, by law or by rules and regulations of a conservation agency established by law, the furnishing of such information to such agency was made mandatory. Thus, it would occur to us that your problem could be solved by the enactment of a regulation requiring each cement service company to furnish you a copy of the well ticket, signed by the operator for

Mr. W. B. Macey  
Page Two  
May 13, 1955

the company on each well, which would show all information you desire. I enclose herewith a sample of the ticket which shows the number of sacks of cement and the type of cement pumped in the well by Halliburton. You will note on the sample ticket that it contains a lot of information other than the quantity and the kind of cement pumped. All information on the ticket relative to the name of the well, casing size, location of well, depth of well is not information that Halliburton of its own knowledge possesses but is information furnished by the operator to Halliburton. By establishing a rule making it mandatory for Halliburton to furnish you a copy of the ticket, we think you will accomplish the purpose you desire and at the same time, the service companies would not be placed in the position with its customer of volunteering such information, which the customer considers confidential, as based on custom. I would appreciate your advising me further in this regard.

You may rest assured that Halliburton Oil Well Cementing Company is interested in your problem and will cooperate with you in the fullest extent.

Very truly yours,

  
ROBERT O. BROWN

**Gentlemen:**

During the past several months, this Commission and the United States Geological Survey has experienced considerable difficulty in determining the exact amount of cement used in field cementing operations. In many instances field inspectors have found that operators have used less cement than reported to the various regulatory offices.

we feel that the protection of our oil and gas resources and also our surface water is of vital importance. Therefore, we would like to know if you could supply this Commission and also the United States Geological Survey a monthly report showing thereon the name of the operator, the well name and number, the size casing and the amount of cement used. We will be happy to furnish you with a supply of forms to be used for this purpose.

Any suggestions which you might wish to make concerning this matter will be appreciated.

**Very truly yours,**

**W. E. Macey  
Secretary-Director**
