ATTENTION: Mr. D. E. Morris

Gentlemen:

Reference is made to Commission Order No. R-1232, which order was signed by the Commission on August 6, 1958, and approved certain non-standard gas proration units in the Blinebry Gas Pool and in the Tubb Gas Pool, Lea County, New Mexico.

The approval of these non-standard proration units was made contingent upon the successful dual completion of your J. L. Muncy Well No. 2, located 1980 feet from the South and West lines of Section 24, Township 22 South, Range 37 East, NMPM, in the Blinebry Gas Pool and in the Tubb Gas Pool, and upon written notification to the Commission of such successful dual completion.

We are in receipt of your letter of August 15, 1958, wherein you have determined that the completion of the aforesaid J. L. Muncy Well No. 2 to flow 1,118 MCF gas per day through a 5/16-inch choke from the Tubb Gas Pool with a flowing tubing pressure of 586 psi and to flow 6,023 MCF gas per day through a 1/2-inch choke from the Blinebry Gas Pool with a flowing casing pressure of 1,195 psi constitutes the successful dual completion of the subject well in the Blinebry and Tubb Gas zones.

The New Mexico Oil Conservation Commission hereby concurs in your determination that the aforesaid J. L. Muncy Well No. 2 has been successfully dually completed. Allowables for the old proration units assigned to the J. L. Muncy Wells Nos. 1 and 3 respectively, will be cancelled September 1, 1958. Allowables for the four new non-standard gas proration units authorized by Order No. R-1232 will be assigned

The Ohio Oil Company  
Hobbs, New Mexico

August 26, 1958

the various wells involved effective September 1, 1958, or whenever the applicable provisions of Orders Nos. R-586 and R-610 have been complied with, whichever date is later.

Very truly yours,

A. L. Porter, Jr.  
Secretary - Director

Mr. A. L. Porter, Jr.  
New Mexico Oil  
Conservation Commission  
P. O. Box 871  
Santa Fe, New Mexico

Dear Sir:

In compliance with New Mexico Oil Conservation Commission Order No. R-1232, effective August 6, 1958, this is to advise that The Ohio Oil Company has successfully completed its J. L. Muncy Well No.2, located 1980' from south line and 1980' from west line of Section 24, T.22-S. R.37-E., Lea County, New Mexico, as a gas-gas dual in the Blinebry Gas Pool and Tubb Gas Pool.

The results of the dual completion are as follows:

TUBB GAS ZONE - August 12, 1958, well flowed at rate of 1,118 MCF gas per day thru 5/16" choke with flowing tubing pressure 586 psi. Tubb gas zone producing thru 5 1/2" casing perforations from 5855'-5975', 6005'-6063' and 6073'-6120'.

BLINEBRY GAS ZONE - August 14, 1958, well flowed at rate of 6,023 MCF gas per day thru 1/2" choke with flowing casing pressure 1195 psi. Blinebry gas zone producing thru 5 1/2" casing perforations from 5412'-5525'.

The above tests indicate the well's ability to produce a 160 acre gas proration unit allowable in the Blinebry Gas Pool and Tubb Gas Pool.

Yours truly,

*D. E. Morris*
