Case 2466

Subject: Shell Turner 7, Unit L
Section 22, T-21-S, R-37-E
Lea County, New Mexico

New Mexico Oil Conservation Commission
P. O. Box 871
Santa Fe, New Mexico

Gentlemen:

Enclosed is an application to dual complete our Turner No. 7 in the Penrose Skelly (Oil) and Eumont (Gas) Pools, Lea County, New Mexico. Furthermore, please consider this letter as an application for a 320-acre nonstandard Eumont gas proration unit to be dedicated to the subject well as outlined on the attached plat. The gas proration unit will consist of the S/2 of Section 22, T-21-S, R-37-E.

Our intention is to produce the Penrose Skelly oil through tubing and the Eumont gas through the casing-tubing annulus. This method will be similar to that employed in the Gulf King No. 6, located in Unit D, Section 28, T-21-S, R-37-E, which also produces from these two pools. Based on the performance of the King 6 and other nearby Eumont gas wells, the Eumont pay in Turner 7 is expected to have a 72-hour shut-in pressure of approximately 750 psi and will produce dry gas at a top allowable rate.

All operators listed in Item 5 of the attached application have been notified by copies of this letter. Please advise if further information is desired concerning this request.

Very truly yours,

R. L. Rankin
Division Production Manager
