

ESTIMATED EFFECT OF 3000 MINIMUM ALLOWABLE  
BASIN-DAKOTA GAS POOL

Deliverability Groups of Wells	No. Wells	Allowable Assigned Using 3000 Minimum	Allowable Assigned Using no Minimum (B.P. 74)	Actual Allowable Assigned Wells Based on Produc- tion History
0 - 74	11	16,698	16,698	13,164
74 to 214	32	95,715	81,517	83,103
214 to Total	<u>392</u>	<u>3,253,958</u>	<u>3,268,359</u>	<u>3,270,105</u>
	435	3,366,372	3,366,372	3,366,372

Maximum effect of 3000 minimum would be:

.43% of 1% of the allowable for 90.1% of the wells in the pool would go to 7.35% of the wells assigned a minimum of 3000 MCF/Mo.

Actual effect based on 10 months production history of minimum wells would be:

.04% of 1% the allowable for 90.1% of wells in the pool would go to 7.35% of the wells assigned a minimum of 3000 MCF/Mo.
