Mr. James T. Jennings
Attorney at Law
Post Office Box 1180
Roswell, New Mexico

Dear Sir:

Enclosed herewith is Commission Order No. R-2672, entered in Case No. 3005, approving the Ambassador Pearsall Queen Unit Waterflood Project.

According to our calculations, when all of the authorized injection wells have been placed on active injection, the maximum allowable which this project will be eligible to receive under the provisions of Rule 701-E-3 is 630 barrels per day.

Please report any error in this calculated maximum allowable immediately, both to the Santa Fe office of the Commission and the appropriate district proration office.

In order that the allowable assigned to the project may be kept current, and in order that the operator may fully benefit from the allowable provisions of Rule 701, it behooves him to promptly notify both of the aforementioned Commission offices by letter of any change in the status of wells in the project area, i.e., when active injection commences, when additional injection or producing wells are drilled, when additional wells are acquired through purchase or unitization, when wells have received a response to water injection, etc.

Mr. A. L. Porter, Jr.
Secretary-Director
Oil Conservation Commission
Santa Fe, New Mexico

Dear Mr. Porter:

Reference is made to the application of Ambassador Oil Corporation which seeks approval of the Bessall Queen Sand Unit and Water-flood Project, which was submitted on February 11, 1964.

In view of the statement contained in the letter to me which accompanied the application, "These waters will be injected through tubing and packer set immediately above the pay zone within the production casing," it appears that no threat of contamination to the fresh waters which may exist in the area will occur. Therefore, this office offers no objection to the granting of this application, provided we are furnished with an accurate description of the source of the water to be injected when the selection has been made and further provided that we are supplied with an analysis of the source water.

Very truly yours,

S. E. Reynolds
State Engineer
