Re: Initial Plan of Operation
Milnesand (San Andres) Unit
Roosevelt County, New Mexico

Gentlemen:

In accordance with Section 11 of the Milnesand (San Andres) Unit Agreement, this Initial Plan of Operation is respectfully submitted.

Consistent with testimony presented before the New Mexico Oil Conservation Commission (May 21, 1969, Cases 4139 and 4140) Union Texas Petroleum, a division of Allied Chemical Corporation plans to inject up to a total of 20,000 barrels of saltwater per day through 28 injection wells (approximately 700 barrels per day per injection well) as shown on the attached Exhibit 1a. Water produced from the Devonian formation in the Crossroads Field will be mixed with produced water and used as injection water. Injection will be in the San Andres formation in an initial inverted nine spot pattern.

Injection will be through plastic coated tubing in each injection well and will occur below a packer. Inhibited fluid will be put in the annulus above the packer.

To insure maximum recovery through cooperative waterflood operations and to protect the correlative rights of this Unit, Unit Operator is negotiating a line well agreement with the offset operator, Pan American Petroleum Corporation, as they plan to cooperatively waterflood their properties rather than joining this unit.

All work will be conducted in a prudent manner utilizing the best techniques and equipment deemed by the working interest owners to be most efficient.

Respectfully submitted,

Union Texas Petroleum,
