O Dear Mr. Kellahin:

Reference is made to Commission Order No. R-4077, recently entered in Case No. 4470, approving the Anadarko Teas Yates Waterflood Project.

P Injection into each of the ten authorized water injection wells shall be through 2 3/8 inch internally plastic-coated tubing set in a packer located as near as is practicable to the uppermost perforation or the casing shoe. The casing-tubing annulus of each well shall be loaded with a corrosion-inhibited fluid and equipped with a pressure gauge at the surface.

Y As to allowable, our calculations indicate that when all of the authorized injection wells have been placed on active injection, the maximum allowable which this project will be eligible to receive under the provisions of Rule 701-E-3 is 882 barrels per day when the Southeast New Mexico normal unit allowable is 42 barrels per day or less.

Please report any error in this calculated maximum allowable immediately, both to the Santa Fe office of the Commission and the appropriate district proration office.

In order that the allowable assigned to the project may be kept current, and in order that the operator may fully benefit from the allowable provisions of Rule 701, it behooves him to promptly notify

C both of the aforementioned Commission offices by letter of any change in the status of wells in the project area, i.e., when active injection commences, when additional injection or producing wells are drilled, when additional wells are acquired through purchase or unitization, when wells have received a response to water injection, etc.

O Your cooperation in keeping the Commission so informed as to the status of the project and the wells therein will be appreciated.

Very truly yours,

P A. L. PORTER, Jr.
