Dear Mr. Losee:

O
Reference is made to Commission Order No. R-4240, recently entered in Case No. 4641, approving the expansion of the South Langlie Jal Unit Jalmat Waterflood Project.

P
Additional injection was authorized into operator's South Langlie Jal Unit Well No. 23, with injection to be through 2 3/8 inch internally-lined tubing set in a packer at approximately 3100 feet. The casing-tubing annulus is to be loaded with an inert fluid and equipped with a pressure gauge at the surface.

Y
As to allowable, our calculations indicate that when all of the authorized injection wells have been placed on active injection, the maximum allowable which this project will be eligible to receive under the provisions of Rule 701-E-3 is 1134 barrels per day when the Southeast New Mexico normal unit allowable is 42 barrels per day or less.

Please report any error in this calculated maximum allowable immediately, both to the Santa Fe office of the Commission and the appropriate district proration office.

In order that the allowable assigned to the project may be kept current, and in order that the operator may fully benefit from the allowable provisions of Rule 701, it behooves him to promptly notify both of the aforementioned Commission offices by letter of any change in the status of wells in the project area, i.e., when active injection commences, when additional injection or producing wells are drilled, when additional wells are acquired through purchase or unitization, when wells have received a response to water injection, etc.
