RE: Application of Meridian Oil Inc. for Non-Standard Spacing Units,
Non-Standard Location and Downhole Commingling,
Rio Arriba County, New Mexico
San Juan 28-4 Unit #225 Well

Dear Mr. LeMay:

On behalf of Meridian Oil Inc., please find enclosed our Application for a non-standard spacing unit, a non-standard location, and downhole commingling as referenced above, which we request be set for hearing on the next available Examiner's docket now scheduled for July 1, 1993.

By copy of this letter and application, sent certified mail-return receipt requested, we are notifying all interested parties offsetting the subject well and its proposed spacing and proration unit of their right to appear at the hearing and participate in this case, including the right to present evidence either in support of or in opposition to the application and that failure to appear at the hearing may preclude them from any involvement in this case at a later date. Also, all parties entitled to notice are hereby informed that pursuant to Division requirements all parties appearing in this case are required to file a Pre-Hearing Statement with the Division no later than 4:00 p.m. on Friday, June 25, 1993.

Very truly yours,

Alan Alexander

STATE OF NEW MEXICO
ENERGY, MINERALS AND NATURAL RESOURCES DEPARTMENT
OIL CONSERVATION DIVISION

IN THE MATTER OF THE HEARING
CALLED BY THE OIL CONSERVATION
DIVISION FOR THE PURPOSE OF
CONSIDERING:

APPLICATION OF MERIDIAN OIL INC.
FOR A NON-STANDARD SPACING UNIT,
NON-STANDARD LOCATION
AND DOWNHOLE COMMINGLING
RIO ARriba COUNTY, NEW MEXICO.

CASE:

APPLICATION

Comes now MERIDIAN OIL INC., ("Meridian") and applies to the New Mexico Oil Conservation Division for approval to downhole commingle Choza Mesa Pictured Cliffs Gas Pool and the Basin-Fruitland Coal Gas Pool production within the wellbore of its proposed San Juan 28-4 Unit #225 well to be drilled at a non-standard gas well location 695 feet FSL and 1375 feet FWL of Section 7, Township 28 North, Range 4 West, NMPM, Rio Arriba County, New Mexico. Said well is to be dedicated a non-standard 229.88-acre gas spacing unit for the Basin-Fruitland Coal Gas Pool being All of Section 7 and to a non-standard 114.60-acre gas spacing unit for the Choza Mesa Pictured Cliffs Gas Pool being Lots 3-5, SE/SW of said Section 7.

In support of its application, Meridian states:

(1) Meridian is the operator for the proposed San Juan 28-4 Unit #225 Well to be drilled at a non-standard gas well location 695 feet FSL and 1375 feet FWL of Section 7, Township 28 North, Range 4 West, NMPM, Rio Arriba County, New Mexico as shown on Exhibit "A" attached.

(2) The Well is to be drilled so that production from the Basin-Fruitland Coal Gas Pool and the Choza Mesa Pictured Cliffs Gas Pool can be downhole commingled in the wellbore.

(3) All of Section 7 is to be dedicated to any production from the Basin Fruitland Coal Gas Pool. It consists of Lots 1 through 5, SE/4 SW/4 and S/2 SE/4 of Section 7 and contains 229.88 acres, more or less. See Exhibit "A" attached. Meridian proposes to follow the "Mesaverde solution" for acreage dedicated to a non-standard Mesaverde Unit for the San Juan 28-4 Unit #21 Well and apply this solution to the Basin Fruitland Coal formation.

(4) Lots 3, 4, 5, SE/4 SW/4 of Section 7, containing 114.60 acres, is to be dedicated to any production from the Choza Mesa Pictured Cliffs Gas Pool. See Exhibit "A" attached.

(5) The ownership is common between these two spacing units.

(6) In accordance with Division Rule 303-C-1.(b), the Applicant states and will demonstrate at hearing:

a. That drilling the San Juan 28-4 Unit #225 Well initially for downhole commingling in the wellbore is necessary because it is not otherwise economic to attempt to drill and complete a separate well for Fruitland coal gas production nor is it economic to attempt to dually complete those formations in the proposed well.

b. That there will be no crossflow between the two zones commingled.

c. That the ownership in each of the two spacing units is common between the two pools and no impairment of correlative rights will occur.

d. It is expected that the bottom hole pressure of the lower pressure zone is not less than 50 percent of the bottom hole pressure of the higher pressure zone adjusted to a common datum.

e. That the value of the commingled production will not be less than the sum of the values of the individual production.

(7) The Fruitland Coal formation in this area of the basin should be marginally productive.

(8) Due to the nature of the Basin-Fruitland Coal Gas production, straight allocation of gas volumes from both zones is not appropriate. Meridian therefore seeks the adoption of a monthly allocation formula, to be presented at the hearing in this matter.

(9) While the downhole commingling is subject to administrative approval, the non-standard spacing unit and non-standard location for both the Choza Mesa Pictured Cliffs Gas Pool and the Basin-Fruitland Coal Pool requires a hearing. Therefore, Applicant requests that these matters be docketed for hearing on the Division's Examiner docket now scheduled for July 1, 1993.

(10) In accordance with Division Rule 1207.A(6) a copy of this application has been sent to all offsetting operators as set forth on Exhibit "C".

WHEREFORE Applicant requests that this matter be set for hearing on July 1, 1993, before a duly appointed Examiner of the Oil Conservation Division and that after notice and hearing as required by law, the Division enter its order granting this application.

Respectfully submitted,

A handwritten signature in cursive script that reads "Alan Alexander".

CERTIFICATE OF MAILING

AND

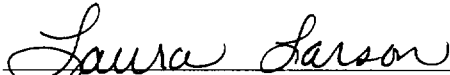

COMPLIANCE WITH ORDER R-8054

Alan Alexander, authorized representative of MERIDIAN OIL INC., states that the notice provisions of Division Rule 1207 (Order R-8054) have been complied with, that Applicant has caused to be conducted a good faith diligent effort to find the correct address of all interested parties entitled to receive notice, that on June 7, 1993, I caused to be mailed by certified mail, return-receipt requested notice of this hearing and a copy of the application for the above referenced, along with the cover letter, at least twenty days prior to the hearing set of July 1, 1993, to the parties shown in the application as evidenced by the attached copies of return-receipt cards, and that pursuant to Division Rule 1207, notice has been given at the correct addresses provided by such rule.

Alan Alexander

SAN JUAN 28-4 UNIT #225

In order to facilitate an economic Pictured Cliffs completion three requirements must be met. It is the combination of these three requirements that determines the economic status and completion method (PC single completion, PC-FTC Dual, PC-FTC commingle) utilized. These three requirements are as follows:

RESERVES $N_p(pc)$

FLOW RATE (Q_{pci})

COSTS (Investment and Operating)

Shown in the following example are the parameters and calculations used to determine Pictured Cliffs initial rate (Q_{pci}), Pictured Cliffs Estimated Ultimate Recovery ($N_p(pc)$), and Pictured Cliffs decline rate (D_{pc}). Additionally, estimated costs associated with each completion method and economic sensitivities (figures 1-3) are attached to show the effects of PC reserves ($N_p(pc)$), initial PC rates (Q_{pci}), and completion method (costs).

This example is for the San Juan 28-4 Unit #225, but the methodology is applicable for each of the subsequent commingle applications to be submitted (the Valdez #5 in hearing; the San Juan 29-4 Unit #200, San Juan 28-4 Unit #226, San Juan 28-5 Unit #200, #227, #228, and #232 administratively). The variations in the $N_p(pc)$'s are due to the specific drill block parameters (thickness, porosity, water saturation). Costs will be similar and the economic sensitivities are applicable for each case.

The monthly gas production allocation formula presented is similar to the allocation formula presented by Meridian Oil in previous commingle hearings.

SAN JUAN 28-4 UNIT #225

MONTHLY GAS PRODUCTION ALLOCATION FORMULA

GENERAL EQUATION

$$Q_t = Q_{ftc} + Q_{pc}$$

WHERE: Q_t = TOTAL MONTHLY PRODUCTION (MCF/MONTH)
 Q_{ftc} = FRUITLAND COAL (ftc) MONTHLY PRODUCTION
 Q_{pc} = PICTURED CLIFFS (pc) MONTHLY PRODUCTION (MCF/MONTH)

REARRANGING THE EQUATION TO SOLVE FOR Q_{ftc} :

$$Q_{ftc} = Q_t - Q_{pc}$$

ANY PRODUCTION RATE OVER WHAT IS CALCULATED FOR THE PICTURED CLIFFS (PC) USING THE APPLIED FORMULA IS FRUITLAND COAL (FTC) PRODUCTION.

ICTURED CLIFFS (PC) FORMATION PRODUCTION FORMULA IS:

$$Q_{pc} = Q_{pci} \times e^{-\{D_{pc} \times (t)\}}$$

WHERE: Q_{pci} = INITIAL PC MONTHLY FLOW RATE (CALCULATED FROM FLOW TEST)
 D_{pc} = PICTURED CLIFFS MONTHLY DECLINE RATE CALCULATED FROM:
 $D_{pc} = (Q_{pci} - Q_{pcabd}) / N_{p(pc)}$
See Determination of Q_{pci} and PC Estimated Ultimate Recovery ($N_{p(pc)}$)
 $Q_{pcabd} = 300$ MCF/M

WHERE: $N_{p(pc)}$ = PICTURED CLIFFS ESTIMATED ULTIMATE RECOVERY (EUR)
 $N_{p(pc)} = P \times 1.01 \text{ MMCF/PSI}^{**} \times R_f$
 P^* = INITIAL RESERVOIR PRESSURE (SIBHP)
 R_f = RECOVERY (FIELD ANALOGY): = 0.95
 ** DETERMINED FROM MATERIAL BALANCE (FIELD ANALOGY) AND VOLUMETRIC RESERVES (LOG ANALYSIS)

By calculating $N_{p(pc)}$ from SIBHP and determining Q_{pci} , D_{pc} can then be calculated utilizing the previously described parameters. See derivation of D_{pc} , item (c) on page 4.

THUS: $Q_{ftc} = Q_t - Q_{pci} \times e^{-\{D_{pc} \times (t)\}}$
WHERE: (t) IS IN MONTHS

REFERENCE: Thompson, R. S., and Wright, J. D., "Oil Property Evaluation", pages 5-2, 5-3, 5-4.

SAN JUAN 28-4 UNIT #225

DETERMINATION OF Q_{pci} : (INITIAL PICTURED CLIFFS MONTHLY PRODUCTION)

$$Q_{pci} = Q_{t(1)} \times Q_{pc(p)} / \{Q_{pc(p)} + Q_{ftc(p)}\}$$

WHERE:

$Q_{t(1)}$ = FIRST MONTH TOTAL PRODUCTION (MCF)

$Q_{pc(p)}$ = FINAL PICTURED CLIFFS FLOW TEST (MCFPD)

$Q_{ftc(p)}$ = FINAL FRUITLAND COAL FLOW TEST (MCFPD)

SAN JUAN 28-4 UNIT #225

EXAMPLE DETERMINATION OF:

(a) $N_p(pc)$

(b) Q_{pci}

(c) D_{pc}

PC EUR

INITIAL PC MONTHLY FLOW RATE

PC MONTHLY DECLINE RATE

(a) DETERMINATION OF $N_p(pc)$

(see page 5 for $N_p(pc)$ derivation)

$$N_p(pc) = 1.01 \text{ (MMCF/PSI)} \times P^* \text{ (PSI)} \times R_f$$

$$P^* = 986 \text{ PSI (FROM SIBHP)}$$

$$N_p(pc) = 1.01 \text{ MMCF/PSI} \times 986 \text{ PSI} \times 0.95$$

$$\underline{N_p(pc) = 946.1 \text{ MMCF}}$$

(b) DETERMINATION OF Q_{pci}

$$Q_{pci} = Q_t(1) \times \{Q_{pc}(p)/(Q_{pc}(p) + Q_{ftc}(p))\}$$

$$Q_t(1) = 15,000 \text{ MCF}$$

$$Q_{pc}(p) = 500 \text{ MCF/D}$$

$$Q_{ftc}(p) = 400 \text{ MCF/D}$$

1ST MONTH TOTAL PRODUCTION

PC FLOW TEST

FTC FLOW TEST

$$Q_{pci} = 15,000 \text{ MCF/M} \times \{500 \text{ MCF/D}/(500 \text{ MCF/D} + 400 \text{ MCF/D})\}$$

$$\underline{Q_{pci} = 8,333 \text{ MCF/M}}$$

(c) DETERMINATION OF D_{pc}

$$D_{pc} = (Q_{pci} - Q_{pcabd})/N_p(pc)$$

$$Q_{pcabd} = 300 \text{ MCF/M}$$

$$D_{pc} = (8,333 \text{ MCF/M} - 300 \text{ MCF/M})/(946,100 \text{ MCF})$$

$$\underline{D_{pc} = 0.0085/\text{M}}$$

$$\underline{\text{THUS: } Q_{ftc} = Q_t(\text{MCF/M}) - 8,333(\text{MCF/M}) \times e^{\{-(0.0085(1/\text{M})) \times t(\text{M})\}}}$$

SAN JUAN 28-4 UNIT #225

A. DETERMINATION OF PC RESERVES $N_p(pc) = (HCPV \times B_g \times R_f)$
 Volumetric Evaluation (averages are for subject 160 acre drill block)

a.	(t)	thickness	=	28.0	ft
b.	(phi)	porosity	=	14.0	%
c.	(Sw)	H2O saturation	=	44.0	%
d.	(Rf)	Recovery Factor	=	95.0	%
e.	(rcf)	Reservoir Cubic Feet	@	reservoir conditions	
f.	(scf)	Standard Cubic Feet	@	standard conditions	

1. HCPV = HYDROCARBON PORE VOLUME (rcf)

$$\begin{aligned}
 &= t \text{ (ft)} \times a \text{ (ft}^2\text{)} \times \phi \times (1-S_w) \\
 &= 28 \text{ (ft)} \times 160 \text{ (acres)} \times 43,560 \text{ (ft}^2\text{/acre)} \times 0.14 \times (1-0.44) \\
 &= 15,299,666 \text{ ft}^3 \quad 1 \text{ mmrcf} = 1,000,000 \text{ ft}^3
 \end{aligned}$$

HCPV = 15.300 mmrcf

2. B_g = FORMATION VOLUME FACTOR (scf/rcf)

UTILIZING THE REAL GAS LAW TO DETERMINE THE FORMATION VOLUME FACTOR (B_g):

REAL GAS LAW states:

$$P V = Z n R T$$

Rearranging to solve for n:

$$n = P V / Z R T$$

assuming:

$$n_r = n_s$$

WHERE: n_r = NUMBER OF MOLES OF GAS AT RESERVOIR CONDITION

n_s = NUMBER OF MOLES OF GAS AT SURFACE CONDITIONS

THUS: $\frac{P_r V_r}{Z_r T_r R} = \frac{P_s V_s}{Z_s T_s R}$

Rearranging: $\frac{V_s}{V_r} = \frac{B_g}{1} = \frac{Z_s T_s P_r}{Z_r T_r P_s}$

assuming:

$$\begin{aligned}
 Z_s &= 1.00 \\
 Z_r &= 0.94 \\
 T_s &= 60 \text{ } ^\circ\text{F} \quad \text{or } 520 \text{ } ^\circ\text{R} \\
 T_r &= 100 \text{ } ^\circ\text{F} \quad \text{or } 560 \text{ } ^\circ\text{R} \\
 P_s &= 15.025 \text{ psia} \\
 P_r &= \text{Determined from build-up test}
 \end{aligned}$$

$$\begin{aligned}
 B_g &= \text{FORMATION VOLUME FACTOR (scf/rcf)} = \frac{Z_s T_s P_r}{Z_r T_r P_s} \\
 &= (\text{scf/rcf}) \{1.00 \times 520 \text{ (} ^\circ\text{R)} \times P_r \text{ (psia)}\} / \{0.94 \times 560 \text{ (} ^\circ\text{R)} \times 15.025 \text{ (psia)}\}
 \end{aligned}$$

$B_g = 0.0657 \{ \text{scf} / (\text{rcf psia}) \} \times P_r \text{ (psia)}$

3. EUR = HCPV $\times B_g \times R_f$

$$= 15.300 \text{ (mmrcf)} \times 0.0657 \{ \text{scf} / (\text{rcf psia}) \} \times P_r \text{ (psia)} \times 0.95$$

$N_p(pc) = 1.01 \text{ (mmscf/psia)} \times P_r \text{ (psia)} \times 0.95$

SAN JUAN 28-4 UNIT #225

C. ECONOMIC SUMMARY

FIGURES 1-3 PICTURED CLIFFS RESERVES VS RATE OF RETURN (%)

THREE CASES PER FIGURE (FTC/PC COMMINGLE, FTC/PC DUAL, PC SINGLE)

FIGURE 1 INITIAL RATE = 100 MCF/D

FIGURE 2 INITIAL RATE = 200 MCF/D

FIGURE 3 INITIAL RATE = 300 MCF/D

SAN JUAN 28-4 UNIT #225

Expected Reservoir Pressures

Pictured Cliffs - Average of the 2 closest PC completions is 1041 psi SICP (pressures range from 1017 psi to 1065 psi). All of the completions are 2-3 miles east and northeast and 1-2 miles northeast of the subject location in T29N, R04W. The initial pressure at the subject location is expected to be the offsetting PC average of 1041 psi.

Fruitland Coal - Average of the 3 closest FTC completions is 1078 psi SICP (pressures range from 635 to 1459 psi). All of the completions are 1-2 miles south and northeast of the subject location within T28N, R04W and T29N, R04W. The pressure at the subject location is expected to be the offset FTC average of 1078 psi.

PC - 1041 psi, FTC - 1078 psi. Within limits of pressure requirements for commingling.

Fluid Compatibility

Neither producing formation makes oil or water in existing wells in the area. Both formations are very dry gas producers and no fluid production is anticipated in this well.

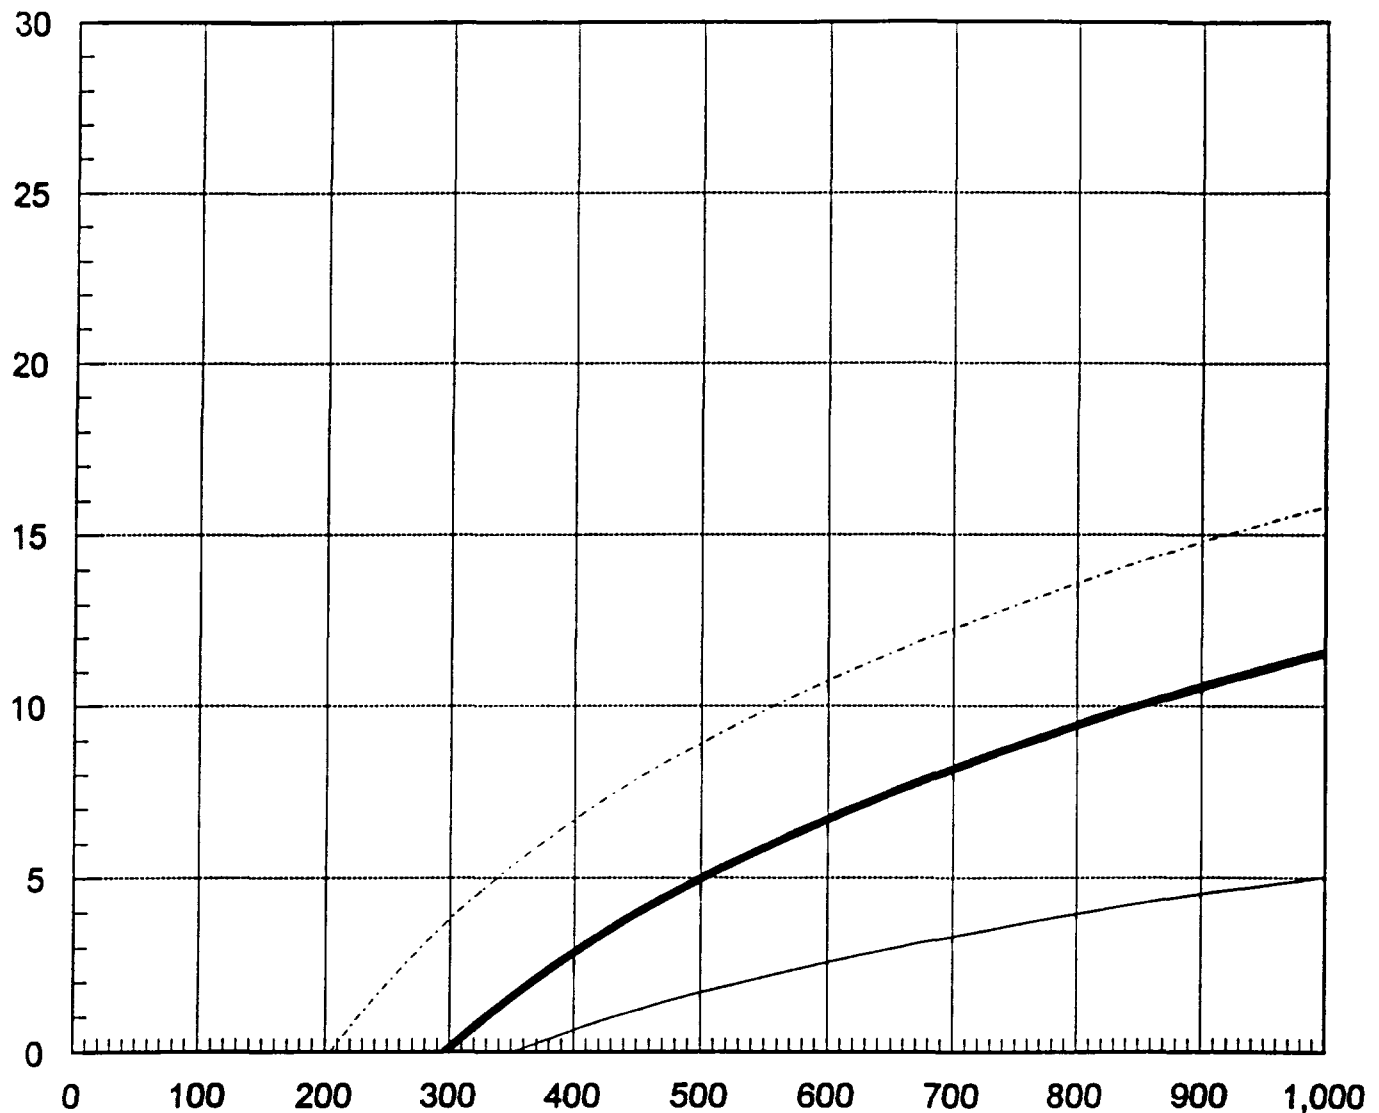

PC - dry gas production , FTC - dry gas production. Only natural gas will be produced so fluids are compatible.
