

EXHIBIT NO. 1  
STATEMENT OF PROBLEM

W.A. Moncrief, Jr., #1 MARATHON ST.  
Sec 11-T24S-R24E Eddy Co., NM

DATE: 6-6-84

This well was completed from Morrow "E" perfs 10,544-10,565', Morrow "D" perfs 10,427-10,431' and Morrow "B" perfs 10,322-10,328' for CAOF of 17,761 MCFGPD on 5-5-80 after 500 gallons M.A. (see EXHIBIT NO. 7).

Both the Morrow "B" and Morrow "E" sands flowed gas on DST. The Morrow "D" was not tested during drilling operations and it is doubtful that it ever contributed to production.

The well was pinched back from a 13/64" choke to a 12/64" choke on 10-1-81 and operator noted a pronounced decline (see EXHIBIT NO. 4-A).

The well started making 10-15 BWPD in early 1982, but we didn't know which zone was making the water. It was still a very good gas well and the water production did not seem to impair the gas production.

EPNG requested that we shut-in the #1 and #2 Marathon State wells due to their reduced demand for gas on 5-28-82. Moncrief requested permission to pinch back production from both these wells and their #2 Baldridge Federal well rather than completely shut in the two Marathon State wells since the #1 Marathon State made considerable water and we were afraid that a complete shut-in would either ruin or permanently damage it. EPNG insisted that the two Marathon State wells be shut in. They were shut in 6-18-82. The #1 Marathon State was delivering 1,202 MCFGPD on 10/64" ck w/FTP 1750# prior to being shut in (see EXHIBIT NO. 4).

EPNG advised us we could return these wells to normal production on 7-7-82. The #1 would not flow. A swabbing unit arrived on location 7-12-82 and found FL at 2,700'. The well was swabbed 6 hours on 7-12-82 and 3 hrs on 7-13-82 before it would continue to flow. The well was permanently damaged

from this shut-in period and never regained the FTP nor capacity to produce which it had prior to the shut-in. The FTP had been 1750#/ for 35 days prior to the shut-in. The maximum FTP experienced after the shut-in was 1025#/ in August of 1982.

Operator continued to produce all perfs. Mr. Jim Minnick of El Paso's Jal office was notified of the permanent damage as a result of the shut-in period and agreed that the well should be exempt from future shut-ins or pinch backs to prevent further damage. Mr. Less Clements of the Artesia office of the Oil Conservation Division was notified of this damage by letter dated 10-1-82 and granted an exception to the Annual Gas Shut-In Pressure Test (Division Rule 402) by letter dated 10-8-82 which is EXHIBIT NO. 3 to this application.

The well continued to produce from all perfs until 6-25-83 when it loaded up with water and would no longer flow. Operator MI a unit on 7-5-83 and isolated and tested the Morrow "B" and Morrow "E" zones separately and determined that the Morrow "B" perfs 10,322-10,328' were making most of the water and that the Morrow "E" perfs 10,544-10,565' were making most of the gas and a small amount of water.

The well has continued to produce from the Morrow "E" perfs only since 9-3-83, but has been exempt from shut-ins or pinch-backs.

Operator is afraid that any future shut-ins would result in further damage to this well.

Re: Annual Gas Well Shut-In  
Pressure Test  
(Division Rule 402)

Gentlemen:

Your request for exception to the subject rule for the following wells is hereby approved.

Marathon State Com	#1-J-11-24-24	Baldridge Canyon Morrow Pool
Baldridge Federal	#2-B-14-24-24	Baldridge Canyon Morrow Pool
Jurnegan State Com	#1-C- 8-24-24	Undesignated Strawn Pool

However if for any reason the well is shut-in during the year, the test is to be taken and the results reported.

Very truly yours,

*Leslie A. Clements*  
Leslie A. Clements  
District Supervisor

thru  
7-6-82
- 7-7-82 SITP 2050#. Opened valve. Well would not flow. Must be loaded up with wtr.
- 7-8-82 SITP 975#. Opened valve. Well would not flow. Will have to MI swabbing unit to kick well off.
- 7-13-82 Unit arrived @ noon & RU. Started swabbing @ 12:30 p.m. w/FL @ 2700' FS. Swbd 6' & lowered FL to 8500' & well started flowing. Flowed 1' & died. Well KO again this AM. Water is loaded w/iron sulfide. Does not smell like sulfur wtr. Will get sample of wtr for analysis.
- 7-14-82 12' SITP 1450# @ 8:00 a.m. 7-13-82. Well would not flow. Ran swab 3 times & well started flowing. Released unit @ 11:15 a.m. NM time. Well flowed 6-7 BWPH for next 7 hrs w/250# FTP on 1/2" ck. Flowing through separator w/gas going to atmosphere & water to wtr tank. Will pinch back this AM to get enough FTP to buck the line pressure. Left flowing overnite on 1/2" ck. We have either damaged the well or water has invaded the pay sand & will have to be flowed out of the pay zone before well gets back to normal as it was before EPNG required us to shut it in.
- 7-15-82 Flowed to air until 4:00 p.m. & turned down PL on 14/64" ck. FTP 1000#.

Geological Log Data:

- Moraine "B" 10,400 - 10,413 (Perf 10,408-10,410)
- Lower "C" 10,508
- "D" 10,600
- "E" Lime 10,624 - 10,638 (Perf 10,624-10,638)
- "E" SO. 10,700
- Barnett 10,722 - 10,742 (Perf 10,722-10,742)
- Lo. MSCUEN 10,825
- F.R. (CHU) 10,830
- F.R. (CHU) 10,832
