NOTICE OF APPLICATION FOR FLUID INJECTION WELL PERMIT

H. L. Brown, Jr. is making application to the New Mexico Oil Conservation Commission for a permit to inject fluid into a formation which is productive of oil and gas.

The Applicant proposes to inject fluid into its Saunders A Well No. 1. The proposed well was a dry hole located in Section 5, T8S, R37E. It originally tested the Bluitt San Andres Gas Pool, Roosevelt County, New Mexico, at non-commercial rates. Fluid will be injected into strata in the subsurface depth interval from 4030'-4535'.

social counseling," said Dr. Vernon Mark, the director of neurosurgery at Boston City Hospital, who was chairman of the symposium. But, he said, "Most (offenders) are not recognized as having something organically wrong with them."

Researchers in the rapidly developing field of biological psychiatry say it has often made the traditional psychoanalytic approach obsolete by tracing many serious mental illnesses to physiological brain abnormalities.

The researchers attending the symposium cited two examples where biological psychiatry could have headed off violence.

Months before John W. Hinckley tried to assassinate President Reagan in 1981, he complained to a psychologist about violent thoughts and about being obsessed with teen-age movie star Jodie Foster. But the doctor released him from care, saying Hinckley was not seriously mentally ill.

After Reagan and three others were shot, a scan revealed Hinckley suffered from cortical atrophy, a form of brain damage found in one of every three schizophrenics but in only 2 percent of the general population.

The condition can be controlled by a drug.

Charles Whitman, a sniper who killed 14 people and wounded 31 from a University of Texas tower in 1966, suffered from headaches and repeatedly asked to be committed to a doctor's care before the shooting spree, Mark said.

After he was slain by police, an autopsy revealed the cause of Whitman's violence — a tumor at the base of his brain.

Gentlemen:

H. L. Brown, Jr. has filed with the New Mexico Oil Conservation Commission an Application to Dispose of Salt Water by Injection into a porous formation productive of oil or gas.

H. L. Brown, Jr. is proposing to re-enter its Saunders "A" Well No. 1, a dry hole drilled in 1968 located in Sec. 5, 8S-37E in the Bluit (San Andres) Pool in Roosevelt County, New Mexico. We propose to inject water through a perforated interval from 4030' to 4535'. This well is located approximately one mile + from your producing property located in Section 8. We do not feel that our operations should in any way interfere with the operations of your well.

If you have no objections to the subject application, please sign and return one copy of the waiver to my attention as soon as possible.

Sincerely yours,

Jean Mills  
Production Clerk
