Letters TO NMOC' BL PASONGC

Dinero Operating Company P. O. Box 10505 Midland, Texas 79702

EXHIBIT

#### Gentlemen:

We propose that tests for state government regulatory bodies be conducted on the well (s) listed below. You are requested to have a representative present to conduct the tests or observe the tests. If your representative is not present, El loso Exploration Company will conduct the tests and forward the test data to you for filing with the state agencies.

TEST	PRE-FI.OW	SHUT-III

## P. O. DRAWER 10505 MIDLAND, TEXAS 79702

June 24, 1981

New Mexico Oil and Gas Commission Drawer DD Artesia, New Mexico 88210

ATTN: W. A. Gressett

#### Gentlemen:

Enclosed is a copy of a letter we have written to El Paso with an attached schedule for annual shut-in pressure tests. Last year we requested and were granted by your office exemption to these shut-in periods. As you may recall during that test period we completely lost one well and experienced curtailed production in others. It appears that the Atoka-Morrow formation in this area has substantial bentonitic clay inclusions which swell when any water is allowed to accumulate in the well bore or in the porous space in the formation when they are closed in.

Because of our past experience wherein we lost a considerable volume of gas which would in all probability have been recovered had we not shut-in the wells, we now respectfully request that these wells be permanently exempted from any shut-in requirements by the Commission.

It is our desire to comply with any and all regulations of the New Mexico Oil and Gas Commission and will forward any other information as you may feel necessary to justify granting this request.

Very truly yours,

Dinero Operating Company

Re: Exception to Shut-In Gas Wells, Eddy County,

New Mexico

#### Gentlemen:

Responding to your telephone request of May 25, 1982, whereby El Paso proposed the shutting-in of certain wells operated by Dinero Operating Company in Eddy County, New Mexico. This is to advise you that we most emphatically urge that the following wells not be shut-in for any reason whatsoever:

Big Chief #1, 1980' FN&W of Sec. 22, T22, R-28 Big Chief #2, 1980' FN, 660 FS, Sec. 22, T22, R-28 Big Chief #3, 1980' FS&E, Sec. 21, T-22, R-28 Big Chief #4, 1980' FW, 660FS, Sec. 15, T-22, R-28 Big Chief #5, 1980' FN, 660 FW, Sec. 15, T-22, R-28 Little Squaw #1, 1980' FN&W, Sec. 27, T-22, R-28 Little Squaw #2, 1980' FW, 660FS, Sec. 27, T-22, R-28

These wells are all in the Dublin Ranch Field. It has been the experience in the area that once these wells have been placed on production and are then subsequently closed in for any reason they have become incapable of producing gas in any substantial quantity. Our Big Chief #3 wells were producing in excess of one million cubic feet per day, one was shut-in waiting for a gas connection, the other was shut-in by El Paso. I believe, because of a pipeline crowding, neither well was subsequently capable of producing 100 mcf per day and were of necessity re-completed in alternate zones which did not appear to be as good as those from which we originally completed.

For your information, we have appealed to the State of New Mexico Oil and Gas Commission to exempt the subject wells from the "Annual Shut-In Bottom Hole Pressure Tests." This request was granted, as the state did not feel that we should be subjected to the risk of losing these wells.

We certainly appreciate your consideration of this request, and sincerely hope that short of total depletion or a national disaster, these wells will never be shut-in.

Very truly yours,

DINERO OPERATING COMPANY

Russell . Ramsland
