Gentlemen:

Enclosed herewith is Commission Order No. R-2461, entered in Case No. 2775, approving the Cinco Capitan et al Red Lake Water Flood Project.

According to our calculations, when all of the authorized injection wells have been placed on active injection, the maximum allowable which this project will be eligible to receive under the provisions of Rule 701-E-3 is 952 barrels per day. *Provided however, that unless otherwise agreed to by all parties and evidence thereof furnished the Commission,*

Please report any error in this calculated maximum allowable immediately, both to the Santa Fe office of the Commission and the appropriate District proration office.

In order that the allowable assigned to the project may be kept current, and in order that the operator may fully benefit from the allowable provisions of Rule 701, it behooves him to promptly notify both of the aforementioned Commission offices by letter of any change in the status of wells in the project area, i.e., when active injection commences, when additional injection or producing wells are drilled, when additional wells are acquired through purchase or unitization, when wells have received a response to water injection, etc.

Your cooperation in keeping the Commission so informed as to the status of the project and the wells therein will be appreciated.

the transfer of allowables within the project area of this waterflood shall be authorized only insofar as the transfer is made between owners having common ownership.

Very truly yours,

A. L. PORTER, Jr.
Secretary-Director

and when all of the proposed wells have been drilled or re-entered and placed on production, and assuming the Delhi State School Chambers & Kennedy and only State lease shall be a part of the project.

Dear Sir:

Enclosed herewith is Commission Order No. R-2461, entered in Case No. 2775, approving the Cima Capitan et al Red Lake Waterflood Project.

According to our calculations, when all of the authorized injection wells have been placed on active injection, and when all of the proposed wells have been drilled or re-entered and placed on production, and assuming the Kersey & Co. Delhi State Lease and the Chambers & Kennedy Gulf State Lease to both be a part of the project, the maximum allowable which this project will be eligible to receive under the provisions of Rule 701-E-3 is 952 barrels per day. Provided however, that unless otherwise agreed to by all parties and evidence thereof furnished the Commission, the transfer of allowables within the project area of this waterflood shall be authorized only insofar as the transfer is made between wells having common ownership.

Please report any error in this calculated maximum allowable immediately, both to the Santa Fe office of the Commission and the appropriate district proration office.

In order that the allowable assigned to the project may be kept current, and in order that the operator may fully benefit from the allowable provisions of Rule 701, it behooves him to

Attention: Mr. Tom Welch

Gentlemen:

This is to advise that the Oil Conservation Commission has this date approved an option of two alternative methods of completing the injection wells for the water flood project authorized by Order No. R-2461 on April 1, 1963, for Cima Capitan, Castle and Wigzell and Red Lake Oil Company in the Red Lake Pool, Eddy County, New Mexico.

The alternative casing programs are in exception to the programs proposed in the hearing of Case No. 2775 and are as follows:

Option No. 1 - Set 4½ inch casing approximately 200 feet above the top of the Premier Zone of the Grayburg formation and circulate cement to the surface; injection to be down plastic coated tubing under a packer.

Option No. 2 - Perforate the 6 5/8 inch production casing at a point not more than 300 feet above the top of the Premier Zone of the Grayburg formation and circulate cement to the surface; injection to be down plastic coated tubing under a packer.
