RE: Proposed Parkway Waterflood

Dear Mr. Catanach:

Please find enclosed a new list of wells in the area of review for the proposed Parkway Waterflood and a cross-section containing the Petco State #1. Everything in the area of review has cement across the proposed interval, except the Petco St. #1.

The cross-section shows where the flood interval is within the Petco #1. The intermediate casing is set at 4090', 30' above the top of the A Sand. The top of cement on the long string is at 7844'. This indicates the fresh water in the Capitan is protected but the casing across the Delaware is not. There is no fresh water below 4100".

The concern is damaging the casing in the Petco St. #1. The Apache 3-A, directly south of the Petco St. #1, will be an injection well. It has 6 producing wells around it. With no pressure sink, directly north of the injector it is not likely water will want to migrate that direction. The injected water should go towards the producers and not to the Petco St. #1.

Strata is the operator of this well and are aware of the project. I have told them there appears to be no cement across the injection interval and they have not expressed any great concern to me.

I hope this helps and thank you for your assistance in this project.

Sincerely,

Robert Lee
