RE: Hampton 4M Site
Request for Access to Monitoring Wells

Dear Mr. Haseley:

In order to get a more complete snapshot of subsurface conditions at the Hampton 4M site, PNM is requesting access to monitoring wells installed by Burlington for our upcoming July sampling event. PNM proposes the following activities for July 1998 sampling at the Hampton 4M site.

1. Survey the locations of Burlington wells MW-9 and MW-10 and the hydrocarbon seep at the northwest corner of the well pad such that accurate site cross-sections and groundwater contour maps can be developed.
2. Measure free product and groundwater elevations for all wells in July 1998.
3. Obtain groundwater quality and/or free product samples for all wells in July 1998.

Representatives from Burlington are welcome to collect split samples and/or observe the proposed sampling activities. If you have any questions related to the proposed activities for the Hampton 4M site or other project-related activities, please contact me at 505.241.2974.

Sincerely,

Maureen Gannon
