Gabriel Wade, Acting Director
Oil Conservation Division

Administrative Order DHC-4936
Order Date: February 27, 2019

Hilcorp Energy Company
1111 Travis Street
Houston, Tx. 77002

Attention: Ms. Christine Brock

Huerfano Unit Well No. 101
API No. 30-045-13042
Unit F, Section 19, Township 27 North, Range 10 West NMPM
San Juan County, New Mexico

Pool	BASIN DAKOTA (PRORATED GAS)	Gas (71599)
Names:	FULCHER KUTZ-PICTURED CLIFFS (GAS)	Gas (77200)
	ANGELS PEAK-GALLUP (ASSOCIATED GAS)	Associated (2170)

Reference is made to your recent application for an exception to Division Rule 19.15.12.9A. NMAC of the Division Rules and Regulations to permit the above-described well to commingle production from the subject pools in the wellbore.

It appears that the subject well qualifies for approval for such exception pursuant to the provisions of Division Rule 19.15.12.11A. NMAC, and since reservoir damage or waste will not result from such downhole commingling, and correlative rights will not be violated thereby, you are hereby authorized to commingle the production as described above and any Division Order which authorized the dual completion or otherwise required separation of the zones is hereby placed in abeyance.

In accordance with Division Rule 19.15.12.11A.(6) NMAC, the production attributed to any commingled pool within the well shall not exceed the allowable applicable to that pool.

Applicant shall meet the Aztec District Office prior to commencing commingling operations to discuss any required changes in the wellbore design. Applicant shall provide an updated wellbore diagram that shows the required changes as required by the Aztec District Office, along with the cement tops. After the well has been completed in the new pool, the Applicant shall provide a net pressure plot (or equivalent) of the fracture treatment to the Aztec District Office and Engineering Bureau.

As per the application, the assignment of allowable and allocation of oil and gas production from the subject well for the first four years shall be based on historic production and the subtraction

method. Production attributable to the Fulcher Pictured Cliffs (Gas) Pool shall be the remainder from total production minus the projected historical production from the Basin Dakota (Prorated Gas) Pool and Angels Peak Gallup (Associated) Pools. A production average will be gathered during the 4th year and will be utilized to create a fixed percentage allocation.

This allocation method agrees with the Bureau of Land Management practices.

Assignment of allowable and allocation of production from the well after the fourth year shall be as follows:

BASIN DAKOTA (PRORATED GAS)	Pct. Oil: TBD	Pct. Gas: TBD
FULCHER KUTZ-PICTURED CLIFFS (GAS)	Pct. Oil: TBD	Pct. Gas: TBD
ANGELS PEAK-GALLUP (ASSOCIATED)	Pct. Oil: TBD	Pct. Gas: TBD

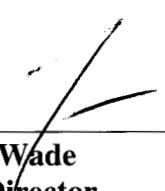

It is also understood that you have given due notice of this application, as defined in Division Rule 19.15.4.12A. (6) NMAC, to all owners of interest within the subject pools.

REMARKS: The operator shall notify the Division's District office upon implementation of commingling operations.

This Order supersedes DHC-1051, issued on November 3, 1994. This amended order adds the Fulcher Pictured Cliffs (Gas) Pool.

This Order is subject to like approval from the Bureau of Land Management.

Pursuant to Division Rule 19.15.12.11B. NMAC, the commingling authority granted herein may be rescinded by the Division Director if conservation is not being best served by such commingling.

Gabriel Wade
Acting Director
