

F-12-10N-5E: Siemens, Wright Well No. 1; from F-8-9N-1W to two miles northeast of Tijeras (Cedar Crest subdivision) for attempted inspection of well reportedly started in 1941. Notice of Intent to Drill (Form C-101) gave proposed depth of 2000'. Scout report gave T. D. 1057' on 2/3/43 and "waiting on casing". Same report shows T. D. 1641' on 6/24/46 without comment. Casing record indicates 6 5/8" was set at 480'. Two other wells in this section, drilled in 1964, were located - being Southern Production Co., Tijeras Canyon Wells No. 1 and No. 2. Reported location of Siemens well could not be found although compass directions and pacing distances from Southern Production well sites are believed accurate enough to have located well site. Southern Production Company locations were quite well re-vegetated so probably Siemens site is now completely obscured, assuming there was no marker placed. C-101 states that a Dave H. Boyd of Zamora, New Mexico, would handle any communications concerning this well. If living, this person's whereabouts is unknown. Bond is still in effect. 7/23/74
