RE: 2007 Annual Groundwater Report for the Blanco Plant South Flare Pit and D Plant Areas

Dear Mr. von Gonten

El Paso Natural Gas Company (EPNG) hereby submits the ***2007 Annual Groundwater Report for the Blanco Plant South Flare Pit and D Plant Areas***. The enclosed report details results from the annual groundwater sampling event, conducted in June 2007 at the South Flare Pit and D Plant areas.

If you have any questions concerning the enclosed report or require additional information, please call me at (713) 420-7361.

Sincerely,

(MWH) for

Ian Yanagisawa P.E., P.G.
Principal Environmental Engineer

TCE	Trichloroethene

1.0 INTRODUCTION

This *2007 Annual Groundwater Report for the Blanco Plant South Flare Pit and D Plant Areas* (Report) has been prepared on behalf of El Paso Natural Gas Company (EPNG) to report the results of the 2007 annual groundwater sampling event at the Blanco Plant site, located near Bloomfield, New Mexico. This work has been performed according to the proposed actions outlined in the *2006 Groundwater Report for the Blanco Plant South Flare Pit and D Plant Areas* (MWH, 2006), which was submitted to New Mexico Oil Conservation Division (NMOCD) in September 2006. Those proposed actions were as follows:

- All groundwater monitoring wells in the Blanco Plant South Flare Pit and D Plant areas will be sampled annually and analyzed for nitrate+nitrite concentrations.
- Groundwater samples from monitoring wells in the D Plant Area (MW-12, MW-13, MW-14 and MW-15) will be analyzed for chlorinated hydrocarbon compounds (CHCs).
- Pending NMOCD approval, EPNG is requesting to abandon monitoring well MW-2.
- The results of the nitrate+nitrite and CHC groundwater sampling will be reported to NMOCD in annual groundwater monitoring reports.

This work was initiated, pursuant to a NMOCD letter dated May 3, 2002, regarding remediation activities at EPNG's Blanco Plant. The regulatory driver for groundwater remediation at this site is the New Mexico Water Quality Control Commission's (NMWQCC) nitrate+nitrite standard of 10 mg/L. The *Groundwater Nitrate Work Plan for Blanco South Flare Pit and D Plant Areas* (the Work Plan) (MWH, 2002) was submitted to NMOCD in July 2002, and was conditionally approved by NMOCD in a letter dated February 21, 2003.

The Blanco Plant is located in San Juan County, New Mexico, approximately 1.5 miles northeast of the town of Bloomfield, New Mexico on San Juan County Road 4900. Figure 1.1, *Blanco Plant Site Layout*, presents the Blanco Plant site layout and location of the D Plant and South Flare Pit. The map also shows the location of the North Flare Pit area.

Section 2.0 of this report summarizes historic information related to groundwater nitrate concentrations at the site, including a description of previous investigations and a description of the geology/hydrogeology of the area. Section 3.0 presents the results of the groundwater sampling event in 2007, Section 4.0 summarizes the results of the sampling event, and Section 5.0 discusses recommendations for continued activities at the site.

2.0 SITE BACKGROUND

2.1 PREVIOUS INVESTIGATIONS OF GROUNDWATER NITRATE

An initial assessment of site hydrogeology of the Blanco Plant area was conducted by Bechtel Environmental in 1989 (Bechtel, 1989). Six monitoring wells were installed and sampled during this investigation. High nitrate concentrations were identified in wells MW-2 (290 ppm) and MW-6 (51 ppm) at that time. It was concluded in this study that "the high concentration of nitrate in the upgradient well (MW-2) could not have been due to plant operations".

As part of a groundwater study by K.W. Brown & Associates, Inc (K.W. Brown, 1990) to investigate the extent of contamination resulting from a leaking underground storage tank in the D Plant Area, the source of elevated nitrate in groundwater was further investigated; therefore, monitoring well, MW-19, was installed upgradient of MW-2. Sampling results from this investigation indicated high nitrate concentrations in MW-2 (200 ppm), MW-19 (90 ppm), MW-14 (210 ppm) and MW-15 (89 ppm). Inspection of the plant area at that time did not find a potential source for nitrate contamination.

Historic and recent groundwater nitrate+nitrite data at the site (including North Flare Pit wells) are presented in Table 2.1.

2.2 SITE GEOLOGY/HYDROGEOLOGY

The geologic framework of the site has been summarized by Bechtel Environmental (Bechtel, 1989) and K.W. Brown and Associates (K.W. Brown, 1990). Based on these assessments, the plant area is located on Quaternary alluvium consisting of sand, silt, clay and gravel. At the plant site, the thickness of the alluvium varies from less than three feet to more than 75 feet (Bechtel, 1989). Underlying the alluvium is the Tertiary Nacimiento Formation consisting of interbedded coarse to medium-grained arkosic sandstone, siltstone and shale which were deposited as both channel fill and floodplain deposits (Bechtel, 1989). Orientation of the channel-fill sandstone deposits may locally control groundwater flow due to higher hydraulic conductivities through these features.

An assessment of site hydrogeology of the Blanco Plant area was conducted by Bechtel Environmental in 1989 (Bechtel, 1989). Based on the information collected during this study, it was concluded that the direction of groundwater flow through the plant area is to the south-southeast through the site. The average hydraulic conductivity was estimated to be 2.1×10^{-4} centimeters per second. Depth to groundwater ranged from 50 feet (at MW-2) to nine feet (at MW-10) below ground surface (5564 to 5552 feet above sea level) (EPNG, 1989). These results were generally consistent with the findings of K.W. Brown (1990).

A potentiometric surface contour map for the site has been prepared based on water level measurements collected in June 2007, and is presented in Figure 2.1. Groundwater is generally flowing to the southeast, with a hydraulic gradient of 0.025 ft/ft in the Blanco D Plant site area. The groundwater flow direction in the South Flare Pit area appears to be influenced as well by apparent mounding caused by recharge from Citizens Ditch. These results are consistent with previous years' data.

3.0 2007 ANNUAL GROUNDWATER SAMPLING EVENT

Monitoring wells at the Blanco Plant were sampled on June 20 and 21, 2007, and analyzed for nitrate+nitrite concentrations and/or CHCs, as described below. Monitoring well MW-20 was damaged in 2000 and abandoned in 2002. In accordance with the approval letter from NMOCD, EPNG plugged and abandoned monitoring wells MW-10, MW-16, MW-17 and MW-18 in December 2003. Groundwater monitoring wells in the North Flare Pit area (MW-19, MW-23, MW-24, MW-26, and MW-27) were removed from the annual nitrate+nitrite sampling event as discussed in the *2006 Groundwater Report for the Blanco Plant South Flare Pit and D Plant Areas* (MWH, 2006).

3.1 GROUNDWATER NITRATE+NITRITE DATA

Groundwater samples were collected on June 20 and 21, 2007 from wells MW-5, MW-6, MW-8, MW-12, MW-13, MW-14, MW-15, MW-28, MW-29, and MW-30 using standard sampling techniques and analyzed for nitrate+nitrite concentrations. Groundwater sampling was attempted at wells MW-2 and MW-7; however, these wells were dry. Field data and sampling information are presented on field sampling forms, included in Appendix A.

Analytical data are listed in Table 2.1, and laboratory analytical reports are included in Appendix B. Nitrate+nitrite concentrations were consistent with historic data for these wells. These data indicate that nitrate+nitrite concentrations have consistently exceeded NMWQCC standards in monitoring wells MW-6, MW-14, MW-15, MW-28, MW-29, and MW-30. Monitoring well MW-5 had not been sampled since November of 2000 due to dry conditions; however, during the June 2007 sampling event the well yielded nitrate+nitrite concentrations exceeding NMWQCC standards at a concentration of 15 milligram per liter (mg/L). Monitoring well MW-2 has not been sampled since 1994 because the well has been dry. Historical groundwater data collected from well MW-2 indicated elevated nitrate+nitrite concentrations above NMWQCC standards. Additionally, monitoring well MW-7 has not been sampled since 2002 because the well has been dry. Historical groundwater data collected from well MW-7 indicated nitrate+nitrite concentrations below NMWQCC standards.

Groundwater nitrate+nitrite concentrations from the June 2007 sampling event are presented on Figure 3.1. A comparison of nitrate+nitrite concentrations versus groundwater elevations over time was performed for monitoring wells MW-8, MW-12, MW-13, MW-14, MW-15, MW-28, MW-29, and MW-30 and are presented in Appendix C. Due to insufficient data, hydrographs were not generated for wells MW-2, MW-5, MW-6, and MW-7. The inferred 10 mg/L isoconcentration contour is also presented on this figure to depict the approximate areas in exceedance of the NMWQCC standard. Between 1994 through 2005, nitrate+nitrite concentrations in all of the wells in the North Flare Pit area have consistently been below the NMWQCC standard; therefore, these wells have not been sampled for nitrate+nitrite since 2005.

3.2 GROUNDWATER CHLORINATED HYDROCARBON DATA

Groundwater samples from the four wells in the D Plant area were also analyzed for a suite of selected CHCs, in accordance with the site monitoring requirements The CHCs

include perchloroethene (PCE), trichloroethene (TCE), 1,1-dichloroethane (DCA), 1,2-dichlorobenzene (DCB), 1,1-dichloroethene (DCE), trans-1,2-DCE and cis-1,2-DCE. These compounds were targeted because they had been detected during previous site characterization work. Annual sampling data from 2002 through 2007 are presented in Table 3.1.

Exceedance of applicable U.S. Environmental Protection Agency (USEPA) maximum contaminant levels (MCLs) and NMWQCC standards were only observed in monitoring wells MW-13 and MW-14. Well MW-13 had a TCE concentration of 29.6 ug/L (MCL is 5.0 ug/L) and a 1,1-DCA concentration of 58.8 ug/L (NMWQCC standard is 25 ug/L). Well MW-14 had a TCE concentration of 11.0 ug/L and a 1,1-DCA concentration of 24.2 ug/L, slightly below the NMWQCC standard. Groundwater chlorinated hydrocarbon concentrations from the June 2007 sampling event are presented on Figure 3.2. Comparisons of selected CHCs concentrations versus groundwater elevations over time was performed for monitoring wells MW-12, MW-13, MW-14, and MW-15 and are presented in Appendix D.

4.0 CONCLUSIONS

The following conclusions have been derived based on current and historic sampling and analyses at the site:

Nitrate+Nitrite Concentrations

- Nitrate+nitrite concentrations in the Blanco Plant area have generally been stable over the previous 5-7 years, displaying no clear increasing or decreasing trends.

- Monitoring well MW-5 had not been sampled since November of 2000 due to dry conditions; however, during the June 2007 sampling event the well yielded nitrate+nitrite concentrations exceeding NMWQCC standard of 10 mg/L at a concentration of 15 mg/L.

Chlorinated Hydrocarbons

- Monitoring wells MW-12 and MW-15 have been below USEPA or NMWQCC standards for CHCs since the June 8, 2006 sampling event.

- Groundwater samples collected from MW-13 exceeded the 1,1-DCA NMWQCC standard of 25 ug/L at a concentration of 58.8 ug/L. Currently, the USEPA does not have a standard for 1,1-DCA. Additionally, the groundwater sample from MW-13 exceeded the TCE USEPA standard of 5.0 ug/L at a concentration of 29.6 ug/L; however, it did not exceed the NMWQCC standard of 100 ug/L. This is generally consistent with historic results. The stable concentrations in MW-13 of cis-1,2-DCE, trans-1,2-DCE, and 1,1-DCE may indicate that reductive dechlorination is occurring within the dissolved phase plume.

- Groundwater samples collected from well MW-14 exceeded the TCE USEPA standard of 5.0 ug/L at a concentration of 11.0 ug/L; however, it did not exceed the NMWQCC standard of 100 ug/L. Additionally, there was an increase in 1,1-DCA, 1,2-DCB, and cis-1,2-DCE in well MW-14; however, these concentrations remain below USEPA and NMWQCC standards for CHCs.

5.0 RECOMMENDATIONS

As shown in Table 4.1, *Groundwater Sampling Schedule*, the following actions will be performed by EPNG to monitor groundwater nitrate+nitrite and CHC concentrations at the site:

- All groundwater monitoring wells in the South Flare Pit and D Plant areas of the Blanco Plant will be sampled annually and analyzed for nitrate+nitrite concentrations.

- Groundwater samples from monitoring wells in the D Plant Area (MW-12, MW-13, MW-14 and MW-15) will continue to be analyzed annually for CHC concentrations, as listed in Table 4.1.

- Well MW-2 has been dry since 2002. All current evidence suggests it is unlikely this well will produce sufficient water for sampling in the future. Therefore, pending approval by NMOCD, EPNG will abandon the well in accordance with NMOCD guidelines.

- The results of the nitrate+nitrite and CHC groundwater sampling will be reported to NMOCD in annual groundwater monitoring reports (typically submitted in August of each year).

- As stated in the *2006 Groundwater Report for the Blanco Plant South Flare Pit and D Plant Areas (September 2006),* beginning in 2008, groundwater monitoring wells in the North Flare Pit area (MW-19, MW-23, MW-24, MW-26, and MW-27) will no longer be sampled or reported since these wells are not associated with the South Flare Pit investigation.

EPNG will notify NMOCD at least 48 hours in advance of all scheduled sampling activities, such that NMOCD has the opportunity to witness the events and split samples, if desired.

ACCUTEST Laboratories

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Montgomery Watson **Job No** T17882

Site: Blanco South Flare Pit **Report Date** 6/29/2007 4:40:31 PM

10 Samples were collected on 06/20/2007 and were received at Accutest on 06/22/2007 properly preserved, at 2.2 Deg. C and intact. These Samples received an Accutest job number of T17882. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix AQ **Batch ID:** VY1299

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) T17948-3MS, T17948-3MSD were used as the QC samples indicated.
- Matrix Spike Recovery(s) for 1,1-Dichloroethylene are outside control limits. Outside control limits due to matrix interference.
- Matrix Spike Duplicate Recovery(s) for 1,1-Dichloroethylene, trans-1,2-Dichloroethylene are outside control limits. Outside control limits due to matrix interference.
- RPD(s) for MSD for trans-1,2-Dichloroethylene are outside control limits for sample T17948-3MSD. Probable cause due to sample homogeneity.

Wet Chemistry By Method EPA 353.2

Matrix AQ **Batch ID:** GN11993

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) T17882-6DUP, T17882-6MS were used as the QC samples for Nitrogen, Nitrate + Nitrite.

Accutest Laboratories Gulf Coast (ALGC) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALGC and as stated on the COC. ALGC certifies that the data meets the Data QualityObjectives for precision, accuracy and completeness as specified in the ALGC Quality Manual except as noted above. This report is to be used in its entirety. ALGC is not responsible for any assumptions of data quality if partial data packages are used

RE: Annual Groundwater Report for the Blanco North Flare Pit Near Bloomfield, NM

Dear Mr. von Gonten;

El Paso Tennessee Pipeline Company hereby submits the enclosed "2007 Blanco North Flare Pit Annual Report." The enclosed report details groundwater sampling and sparge system operation activities between October 2006 and September 2007. This report also includes recommended additional site activities for 2007/2008 period.

If you have any questions concerning the enclosed report or require additional information, please contact me at (719) 520-4433.

Sincerely,

Nancy Prince

1.0 INTRODUCTION

This *2007 Blanco North Flare Pit Annual Report* has been prepared for El Paso Tennessee Pipeline Company (EPTPC) to document the performance of the air sparging (AS) system and to report groundwater monitoring data at the Blanco Plant North Flare Pit site (Site). This report includes field data reports and groundwater analytical data reports for the period from October 2006 through September 2007 (i.e., the reporting period). An evaluation of the AS system and recommendations for future activities are also presented.

The purpose of the Site activities is to monitor and remediate hydrocarbon impacts associated with the former Blanco North Flare Pit. Constituents of potential concern at the site include free-phase hydrocarbons (i.e., free-product), benzene, ethylbenzene, toluene and total xylenes (BTEX). Regulatory drivers for groundwater remediation at this Site include the New Mexico Oil Conservation Division's (NMOCD) guidelines and the New Mexico Water Quality Control Commission's (NMWQCC) groundwater quality standards.

Section 4 includes a listing of previous reports that provide recent historical project information and data.

2.0 REMEDIAL ACTIVITIES

2.1 AIR SPARGING SYSTEM OPERATION

EPTPC operates an AS system in the central area of the Site to remediate dissolved-phase hydrocarbon contamination and reduce BTEX concentrations to below NMWQCC standards. This section discusses system operation and monitoring activities.

The AS system operates on a 12-hour on/off cycle, in order to periodically break up the developed airflow channels in the formation. While running, the AS system injects approximately 5 to 9 scfm of air at a pressure of 4 to 16 psig. During the October 2006 to September 2007 monitoring period the system consistently ran between 11 and 12 hours per day. Based on the meter readings, the AS system ran for approximately 3,829 hours during the monitoring period.

System operation and maintenance (O&M) was conducted generally every two weeks. During each O&M event, air pressure measurements were collected at each wellhead using a magnehelic gauge, and groundwater field parameters, including water levels, pH, temperature, specific conductance and dissolved oxygen, were measured. Following each visit, a field report was prepared to summarize all operation and monitoring data and report any problems. Field operation and monitoring reports for the period between October 2006 to September 2007 are included in **Appendix A**, and selected data are summarized in **Tables 1, 2, and 3.** Monitoring data indicates that there has been good communication between the AS well (SW-1) and wells MW-19, MW-26, and MW-27. Minimal-to-no effects were observable in monitoring wells MW-23 (upgradient of system), MW-24 (virtually dry).

2.2 FREE-PRODUCT REMOVAL

In May 2006, three new monitoring wells were installed (MW-31, MW-32, and MW-33), in an effort to more accurately characterize the Site. 11.25 ft of free-product was measured in MW-32 in August 2006, and 8.73 ft of product was measured in the well in September 2006. A pneumatic skimmer was installed in MW-32 and free-product recovery was initiated in September 2006. As of the August 17, 2007 O&M event, the free product had been fully removed from MW-32. Therefore the decision was made to pull the recovery pump and place absorbent socks in the well. Between October 2006 and August 2007 monitoring period, approximately 14.6 gallons of free-product was removed from monitoring well MW-32, as measured from quantities in the storage drums.

2.3 GROUNDWATER SAMPLING

Quarterly groundwater monitoring has been conducted at six monitoring wells in the North Flare Pit area (MW-19, MW-23, MW-26, MW-27, MW-31, and MW-33). Sampling events were performed in November 2006, February 2007, May 2007, and August 2007. Forty-eight hours prior to each sampling event, the AS system was shut–down to ensure natural groundwater conditions were being evaluated. During each sampling event, groundwater levels and field parameters (pH, temperature, specific conductance and dissolved oxygen) were measured, and samples were analyzed for BTEX

concentrations. Groundwater sample collection field forms are attached in **Appendix B**. Samples were not collected from MW-2 or MW-24 during any of the sampling rounds because the wells were either dry or bailed dry. Water levels could not be measured in MW-19 because the water level probe could not pass an obstruction in the casing; however, grab samples were collected from this well using a small-diameter bailer during the November 2006 and February 2007 sampling events. This well is currently not accessible due to apparent casing damage.

Analytical results from these four sampling events are presented along with the historic data (June 1991 to present) in **Table 4**. Laboratory analytical reports are included in **Appendix C**. Benzene concentrations in groundwater for each of the recent sampling events are presented on Site maps in **Figures 2** through **5**. These maps also present the inferred groundwater gradient direction based on measured static water levels. **Figure 6**, presents trends in historic benzene concentrations in wells MW-19, MW-23, MW-26, MW-27, MW-31, and MW-33.

As shown in **Table 4** and **Figure 6**, groundwater BTEX concentrations have generally decreased subsequent to air sparging activities. The largest decreases have occurred in MW-19, where the benzene concentration was reduced from 10,100 micrograms per liter (µg/L) in June 2003 to the laboratory reporting limit in November 2006; and in MW-26, where free-product was present in June 2003 and the benzene concentration has since been reduced below the laboratory reporting limit, as of the August 2007 sampling event. These wells were also the locations where the physical effects of the AS system (induced wellhead air pressure and increased dissolved oxygen concentrations) have been most pronounced. The data indicate that the focused remedial efforts at the Site have been effective.

Also as shown in Table 4 and Figure 6, groundwater concentrations have not varied significantly between sampling events except the decreases noted above.

3.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the monitoring data from the reporting period, the following conclusions can be drawn:

1. Product recovery and air sparging activities have been effective at removing free-product and reducing dissolved phase BTEX concentrations.

2. The groundwater quality in the area of monitoring well MW-23 does not appear to be improving. Remedial efforts have not been implemented in this area. EPTPC had planned to expand the AS system into this area, but the June 2006 discovery of free-product in monitoring well MW-32 led to postponement of the expansion plans until additional source material delineation and subsequent Site evaluation could be completed.

3. The pneumatic pump installed at monitoring well MW-32 was successful in the removal of free-product from the well. The addition of absorbent socks appears to be effective as well, with the removal of one saturated sock to date.

Therefore, EPTPC has the following recommendations with respect to future Site activities:

1. Groundwater monitoring frequency should be modified from quarterly to a semiannual basis. Sampling will return to a quarterly basis at such time when site BTEX concentrations approach the applicable closure criteria. **Table 3** shows the proposed sampling schedule.

2. Water and product levels will be gauged on a quarterly basis to provide data to support the current remedial efforts.

3. The AS system will continue to be operated approximately 12 hours per day.

4. Free-product recovery utilizing absorbent socks will continue in monitoring well MW-32.

5. A proposal for additional delineation of the area near the former North Flare Pit will be prepared for submission to NMOCD, with the intent of supporting decisions regarding potential future remedial approaches.

6. Site data will be reported to the NMOCD on an annual basis, typically in October.

7. Damaged monitoring well MW-19 will be plugged and abandoned.

Notes:

BTOC = Below Top of Casing
NA = Not Applicable
"<" = Analyte not detected at or above the reporting limit (RL). Value shown is the RL.
1. Shaded data indicate exceedance of New Mexico Water Quality Control Commission's (NMWQCC) standards.
2. All detected concentrations are shown in bold type.

TABLE 5
GROUNDWATER MONITORING SCHEDULE
BLANCO NORTH FLARE PIT - SAN JUAN COUNTY, NEW MEXICO

Monitoring Well	Monitoring Schedule	Analyses
North Flare Pit Area		
MW-2	Semiannually	Field Parameters, BTEX
MW-23	Semiannually	Field Parameters, BTEX
MW-24	Semiannually	Field Parameters, BTEX
MW-26	Semiannually	Field Parameters, BTEX
MW-27	Semiannually	Field Parameters, BTEX
MW-31	Semiannually	Field Parameters, BTEX
MW-32	Semiannually	Field Parameters, BTEX
MW-33	Semiannually	Field Parameters, BTEX

Notes:
1. Field Parameters include temperature, pH, dissolved oxygen and specific conductance.

2. The next sampling event is tenatively scheduled for November 2007.

3. Monitoring well MW-24 typically only has a small quantity of water in the cap below the well screen. This well will only be sampled if the static water level is within the screened interval.

4. Monitoring well MW-32 will be sampled semiannually once LNAPL recovery in this well is completed, as indicated by a repeatedly observed lack of LNAPL accumulation.

BTEX: Benzene, Toluene, Ethylbenzene and Total Xylenes.

Re: Blanco North

10/10/06 1157 O&M site visit.

Well	Depth to Water from TOC Feet	pH	Temp C	Conductivity umhos/cm	Do mg/L	Pressure Inches Water
MW-23	57.40	6.25	17.4	>20000	0.54	0
MW-19	NA	6.55	17.8	17420	3.2	.02
MW-26	64.97	6.67	17.5	5570	4.0	.04
MW-27	66.23	6.41	17.6	10740	0.98	0.01
MW-24	67.12	NA	NA	NA	na	0.01

System was off.

The system operated 198 hrs since 9/18/06, approximately 8.65 hrs per day. The electricity must have been off for about one week.

MW-32: depth to product 53.28 feet BTOC, depth to water 64.44 feet BTOC. Recovered approximately 0.2 feet of product in drum, approximately 3.93 gallons. Tank pressure 1500 psi., pump pressure 60 phi. Accumulated pump time is 8 hrs 56 minutes, 4 hrs 19 minutes since 9/18/06.

The site had flooded during recent rains and there was approximately 1 foot of standing water around MW-26, 27, and 24. Water got into the compressor building but was not high enough to damage the compressor.

There was 0.08 feet of water in MW-24. No physical characteristics were measured.

MW-26	65.20	7.56	18.5	8040	na	.05
MW-27	68.19	6.6	20.2	6640	na	0.05
MW-24	67.13	NA	NA	NA	na	0.05

System was off.

The system operated 176 hrs since 10/10/06, approximately 11.74 hrs per day.

Recovered approximately 0.01 feet of product in drum, approximately 1.77 gallons since last visit. Tank pressure 1100 psi. pump pressure 60 psi. Accumulated pump time is 8 hrs 56 minutes, 2 hrs 43 minutes since 10/10/06.

The site had flooded during recent rains and is drying out. Could not drive to lower wells.

There was 0.06 feet of water in MW-24. No physical characteristics were measured.

Re: Blanco North

010907 1245 O&M site visit.

Well	Depth to Water from TOC Feet	pH	Temp C	Conductivity umhos/cm	Do mg/L	Pressure Inches Water
MW-23	57.49	6.68	21.4	>20000	0.43	0
MW-19	na	na	na	na	na	0.15
MW-26	65.31	6.48	16.3	5830	3.82	0.11
MW-27	68.45	6.49	14.3	8190	3.51	0.15
MW-24	68.14	na	na	na	na	0.13

The system operated 164 hrs since 12/22/06, approximately 11.89 hrs per day.

No product was recovered because the system off until the nitrogen bottle was replaced today. The over-pac drum was open and there was a poly line left hanging out of the bung on the drum. Apparently, someone was interested in what was in the drum and siphoned 0.33 gallons. Installed the new nitrogen bottle, Tank pressure 2400 psi. pump pressure 60 psi. Accumulated pump time is 20 hrs 15 minutes, no pumping time since last visit on 12/22/06.

There was 0.05 feet of water in MW-24. No physical characteristics were measured..

2.5 hrs tech time to change out nitrogen bottle

MW-32; DTP 57.83, DTW 61.39, PT is 3.54 Pump has been out since 12/22/06

Lodestar Services, Incorporated
PO Box 3861 Farmington, NM 87499-3861 Office (505) 334-2791

CC: File

Date: February 13, 2007

Re: Blanco North

021307 0909 O&M site visit.

Well	Depth to Water from TOC Feet	pH	Temp C	Conductivity umhos/cm	Do mg/L	Pressure Inches Water
MW-23	57.36	6.84	15	>20000	0.82	0
MW-19	na	na	na	na	na	5.0
MW-26	65.10	7.30	15.5	6250	3.94	8.6
MW-27	68.46	7.35	14.5	11690	2.00	0.4
MW-24	68.14	na	na	na	na	0.03

The system operated 210 hrs since 01/26/07, approximately 11.68 hrs per day.

No additional product accumulated in drum. Tank pressure 1150 psi. pump pressure 60 psi. Accumulated pump time is 26 hrs 24 minutes, pump ran 3 hrs 12 minutes since 1/26/07, approximately 10.66 min/day.

There was 0.05 feet of water in MW-24. No physical characteristics were measured..

MW-32; DTP 57.86, DTW 61.46, PT is 3.6. There may be a problem with the pump as no product appeared to accumulate in the drum and the product thickness in the well increased slightly. We may want to try manual product removal with a sock due to the slow accumulation. We could bail all of the existing product off the well then install a sock.

Lodestar Services, Incorporated

Re: Blanco North

052107 1400 Site Visit.

Traveled to North Flare Pit and removed empty nitrogen bottle. Drove to Farmington and exchanged empty bottle for full bottle and installed at NFP.

Dept to product at MW-32: 59.00 feet beneath top of casing

Depth to water at MW-32: 59.38 feet beneath top of casing

Replaced pump in well and started.. Pressure in bottle: 2600 psi, pressure on pump: 60 psi, time on clock: 5 hr 44 min. System is pumping product.

Fueled truck and returned to office.

ACCUTEST Laboratories

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Montgomery Watson **Job No** T15282

Site: Blanco North Flare Pit **Report Date** 11/10/2006 1:34:40 PM

5 Samples and 1 Trip Blank were collected on 11/03/2006 and were received at Accutest on 11/04/2006 properly preserved, at 4 Deg. C and intact. These Samples received an Accutest job number of T15282. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GC By Method SW846 8021B

Matrix AQ **Batch ID:** GKK934

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) T15282-2MS, T15282-2MSD were used as the QC samples indicated.
- RPD(s) for MSD for Ethylbenzene are outside control limits for sample T15282-2MSD. Probable cause due to sample homogeneity.
- T15282-2: Sample pH did not meet field preservation criteria.

Matrix AQ **Batch ID:** GKK935

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.

Accutest Laboratories Gulf Coast (ALGC) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALGC and as stated on the COC. ALGC certifies that the data meets the Data QualityObjectives for precision, accuracy and completeness as specified in the ALGC Quality Manual except as noted above. This report is to be used in its entirety. ALGC is not responsible for any assumptions of data quality if partial data packages are used

SAMPLE RECEIPT LOG

JOB #: T15282 DATE/TIME RECEIVED: 11/4/06 1400

CLIENT: MWH Americas INITIALS: AR

Condition/Variance (Circle "Y" for yes and "N" for no or NA. If "N" is circled, see variance for explanation):

1. (Y) N Sample received in undamaged condition.
2. (Y) N Samples received within temp. range.
3. Y (NA) Sample received with proper pH.
4. (Y) N Sample received in proper containers.
5. Y (N) Sample volume sufficient for analysis.
6. (Y) N Sample received with chain of custody.
7. (Y) N Chain of Custody matches **sample IDs and analysis** on containers.
8. (Y) N Samples Headspace acceptable
9. (Y) N NA Custody seal received intact and tamper not evident on cooler.
10. Y N (NA) Custody seal received intact and tamper not evident on bottles.

(a) List QC batch identification if different than Batch ID
A indicates verification criteria were met
A/L indicates verification criteria met based upon Laboratory's QC Summary Form
X indicates verification criteria were not met
N indicates data review were not a project specific requirement
N/A indicates criteria are not applicable for the specified analytical method or sample
N/R indicates data not available for review

NOTES:

1) Sample pH at time of analysis was greater than two, thus reducing the holding time from 14 days to seven. Sample analyzed within seven days.
2) MS/MSD RPD outside acceptance criteria for ethylbenzene (19%[15]). Qualify parent sample result with "J" indicating that the data are estimated.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client:	Montgomery Watson	**Job No**	T16475
Site:	Blanco North Flare Pit	**Report Date**	3/7/2007 2:58:03 PM

5 Samples and 1 Trip Blank were collected on 02/26/2007 and were received at Accutest on 02/28/2007 properly preserved, at 2 Deg. C and intact. These Samples received an Accutest job number of T16475. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GC By Method SW846 8021B

Matrix AQ **Batch ID:** GKK1021

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) T16491-2MS, T16491-2MSD were used as the QC samples indicated.
- T16475-4: Sample was not preserved to a pH < 2; reported results are considered minimum values.
- T16475-2: Sample was not preserved to a pH < 2; reported results are considered minimum values.
- T16475-1: Sample was not preserved to a pH < 2; reported results are considered minimum values.

Matrix AQ **Batch ID:** GKK1023

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) T16527-2MS, T16527-2MSD were used as the QC samples indicated.
- T16475-2: Sample was not preserved to a pH < 2; reported results are considered minimum values.

Accutest Laboratories Gulf Coast (ALGC) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALGC and as stated on the COC. ALGC certifies that the data meets the Data QualityObjectives for precision, accuracy and completeness as specified in the ALGC Quality Manual except as noted above. This report is to be used in its entirety. ALGC is not responsible for any assumptions of data quality if partial data packages are used

CLIENT: MWH Americas INITIALS: AR

Condition/Variance (Circle "Y" for yes and "N" for no or NA. If "N" is circled, see variance for explanation):

1. (Y) N Sample received in undamaged condition.
2. (Y) N Samples received within temp. range.
3. Y (NA) Sample received with proper pH.
4. (Y) N Sample received in proper containers.
5. (Y) N Sample volume sufficient for analysis.
6. (Y) N Sample received with chain of custody.
7. (Y) N Chain of Custody matches **sample IDs and analysis** on containers.
8. (Y) N Samples Headspace acceptable
9. (Y) N NA Custody seal received intact and tamper not evident on cooler.
10. Y N (NA) Custody seal received intact and tamper not evident on bottles.

Injection Time(s)	N	N	N	N	N	N		
Hardcopy vs. Chain-of-Custody	A	A	A	A	A	A		
EDD vs. Hardcopy	N	N	N	N	N	N		
EDD vs. Chain of Custody	N	N	N	N	N	N		

(a) List QC batch identification if different than Batch ID
A indicates verification criteria were met
A/L indicates verification criteria met based upon Laboratory's QC Summary Form
X indicates verification criteria were not met
N indicates data review were not a project specific requirement
N/A indicates criteria are not applicable for the specified analytical method or sample
N/R indicates data not available for review

NOTES:

1) Sample pH at time of analysis was greater than two, thus reducing the holding time from 14 days to seven. Samples were analyzed within seven days; therefore now data are qualified.
2) Toluene detected in trip blank (TB), 260207TB01 at 0.75 J µg/l. Sample ND for toluene are not qualified. Sample with concentrations greater than five times the TB concentration are qualified with a "B" flag indicating that the analyte was detected in an associated blank. However, the TB concentration when compared to the sample concentrations has no affect on the data.
3) Sample pH at time of analysis was greater than two, thus reducing the holding time from 14 days to seven. Sample analyzed eight days after sample collection for benzene only or one day outside of holding time, introducing a possible low bias. Benzene result is qualified with a "J" flags, indicating the datum is estimated and possibly biased low.

ACCUTEST Laboratories

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Montgomery Watson **Job No** T17626

Site: Blanco North Flare Pit **Report Date** 6/4/2007 3:22:17 PM

5 Samples were collected on 05/29/2007 and were received at Accutest on 05/30/2007 properly preserved, at 2.2 Deg. C and intact. These Samples received an Accutest job number of T17626. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GC By Method SW846 8021B

Matrix AQ **Batch ID:** GKK1088

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) T17634-1MS, T17634-1MSD were used as the QC samples indicated.

Accutest Laboratories Gulf Coast (ALGC) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALGC and as stated on the COC. ALGC certifies that the data meets the Data QualityObjectives for precision, accuracy and completeness as specified in the ALGC Quality Manual except as noted above. This report is to be used in its entirety. ALGC is not responsible for any assumptions of data quality if partial data packages are used

ACCUTEST Laboratories

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Montgomery Watson **Job No** T18592

Site: Blanco North Flare Pit **Report Date** 9/4/2007 2:45:43 PM

5 Samples and 1 Trip Blank were collected on 08/22/2007 and were received at Accutest on 08/23/2007 properly preserved, at 2.9 Deg. C and intact. These Samples received an Accutest job number of T18592. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GC By Method SW846 8021B

Matrix AQ **Batch ID:** GKK1173

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) T18592-4MS, T18592-4MSD were used as the QC samples indicated.
- T18592-2 for aaa-Trifluorotoluene: Outside control limits due to matrix interference. Confirmed by reanalysis.
- T18592-2 for 4-Bromofluorobenzene: Outside control limits due to matrix interference. Confirmed by reanalysis.

Accutest Laboratories Gulf Coast (ALGC) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALGC and as stated on the COC. ALGC certifies that the data meets the Data QualityObjectives for precision, accuracy and completeness as specified in the ALGC Quality Manual except as noted above. This report is to be used in its entirety. ALGC is not responsible for any assumptions of data quality if partial data packages are used

SAMPLE LOG-IN

SAMPLE(S) #5- MW-27 (3 ave)
PROJECT Blanco North Flare Pit
FILED BY AR

DATE 8/23/07
LAB NO. T18592

VARIANCE - Check applicable items(s):

- ____ Insufficient sample sent for proper analysis; received approx. ____
- ____ Sample bottle received broken and/or cap not intact.
- ____ Samples received without paperwork; paperwork received without samples.
- ____ Samples received without proper refrigeration, when it has been deemed necessary. Temperature at receipt: ____
- ____ Illegible sample number or label missing from bottle.
- ____ Numbers on sample not the same as numbers on paper work.
- ____ Incomplete instructions received with sample(s) ie.,no request for analysis, no chain of custody, incomplete billing instructions, no due date, etc. Temperature at reciept: ____
- ____ Samples received in improper container or lacking proper preservation.
- ____ Physical characteristics different than those on sampling sheets; Describe: ____
- ____ Rush samples on hold because of incomplete paperwork.
- ____ Other (specify) All samples except #1 & #5 were rec'd. w/ 3 containers, not 2. #5 was rec'd. w/ only one voa vial and may limited.

CORRECTIVE ACTION TAKEN

- ____ Person Contacted
- ____ Client informed verbally.
- ____ Client informed by memo/letter.
- ____ Samples processed as is.
- ____ Samples preserved by lab.
- ____ Client will resample and resubmit.
- ____ By phone.
- ____ Samples processed for information only and noted on report.
- ____ Samples processed with higher detection limits accepted.
- ____ Samples rejected.

T18592-4MS	KK022356.D	1	09/02/07	LJ	n/a	n/a	GKK1173
T18592-4MSD	KK022357.D	1	09/02/07	LJ	n/a	n/a	GKK1173
T18592-4	KK022349.D	1	09/02/07	LJ	n/a	n/a	GKK1173

The QC reported here applies to the following samples: Method: SW846 8021B

T18592-1, T18592-2, T18592-3, T18592-4, T18592-5, T18592-6

CAS No.	Compound	T18592-4 ug/l	Q	Spike ug/l	MS ug/l	MS %	MSD ug/l	MSD %	RPD	Limits Rec/RPD
71-43-2	Benzene	ND		20	21.7	109	22.4	112	3	63-140/20
100-41-4	Ethylbenzene	ND		20	19.7	99	19.7	99	0	74-130/20
108-88-3	Toluene	ND		20	20.5	103	21.2	106	3	76-129/20
1330-20-7	Xylenes (total)	ND		60	61.5	103	61.2	102	0	75-130/20
95-47-6	o-Xylene	ND		20	20.6	103	20.7	104	0	78-128/20
	m,p-Xylene	ND		40	40.9	102	40.4	101	1	75-129/20

CAS No.	Surrogate Recoveries	MS	MSD	T18592-4	Limits
460-00-4	4-Bromofluorobenzene	119%	108%	82%	61-125%
98-08-8	aaa-Trifluorotoluene	114%	110%	90%	50-139%

DATA VERIFICATION WORKSHEET

Analytical Method/Analytes: SW-846 8021B (BTEX) **Sample Collection Date(s):** 08/22/07

Laboratory: Accutest **MWH Job Number:** SJRB

Batch Identification: T18592 **Matrix:** Water

MS/MSD Parent(s)[a]: _____ **Field Replicate Parent(s):** None

Verification Complete: Craig Moore -09/28/07
(Date/Signature)

Foot Notes	Site ID	Sample ID	Lab. ID	Hits (Y/N)	Quals.	Comments

(a) List QC batch identification if different than Batch ID
A indicates verification criteria were met
A/L indicates verification criteria met based upon Laboratory's QC Summary Form
X indicates verification criteria were not met
N indicates data review were not a project specific requirement
N/A indicates criteria are not applicable for the specified analytical method or sample
N/R indicates data not available for review

NOTES:

1) Surrogate recoveries high for 4-bromofluorobenzene (131%[61-125%]) and aaa-trifluorotoluene (155% [50-139]). Qualify associated detected analytes with "J" indicating that the data are estimated with a potential high bias.
