Was a Watercourse Reached? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse.	

If a Watercourse was Impacted, Describe Fully.*

RECEIVED

By OGD; Dr. Oberding at 10:55 am, Jun 04, 2015

Describe Cause of Problem and Remedial Action Taken.*

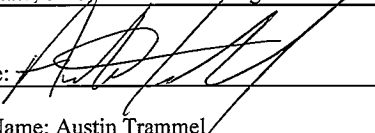

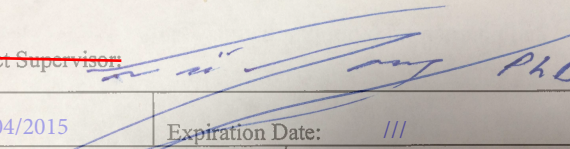

Automation failure caused the tanks to overflow and leak 35bbls of oil and 35 bbls of produced water onto the ground. A vacuum truck recovered 30 bbls of oil and 30 bbls of produced water. The automation was repaired.

Describe Area Affected and Cleanup Action Taken.*

The area inside the tank berm was excavated to a depth of approximately 2', in accordance with the approved NMOCD workplan. Contaminated soil was transported to Sundance, an NMOCD approved disposal facility. The excavated area was backfilled with soil transported from off-site.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
