Randy,

We can only go with the initial report of 7bbls at this time and anything above or below that would just be a guess on our part. With that said reported bbls does not determine how we are delineating the site to make sure we understand the size of the impact.

Thanks,
Casey Summers

> Thank you for the heads up and I apologize for the delay. Samples have been taken by both our guy in the field and by BBC (I have included Cliff on this email). At this time it looks as if we are going to have to drill the site to find bottom of the release. We are currently in the process of trying to find a rig that will go that far north to complete the boring. If possible, it would be best to extend.
