RE: Response to Disapproval
Revised Annual Groundwater Monitoring Report Gallup Refinery - 2016
Western Refining Southwest, Inc. – Gallup Refinery
EPA ID # NMD000333211
HWB-WRG-17-008

Dear Mr. Pierard:

Marathon Petroleum Company LP (dba Western Refining Southwest, Inc.) Gallup Refinery is submitting the enclosed response to your Disapproval dated January 8, 2019 on the referenced Report. You will also find the revised 2016 Annual Report and an electronic redline version of the Report. If there are any questions, please call Greg McCartney at 419-421-2338.

Certification

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision according to a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Sincerely,
Marathon Petroleum Company LP, Gallup Refinery

Robert S. Hanks
Refinery General Manager

RESPONSE TO APPROVAL WITH MODS

April 24, 2020 – Sanitary Lagoon Investigation Report (February 2020)

NMED Comment 1:

An electronic version of the response to comments table was not included in the submittal. For all future submittals including the revised Report, provide both hard copies and an electronic version of the response to comments table along with other required documentation. In addition, the Permittee did not list sections, tables and/or figures in the Report where changes were made, as required, in the response to comments table. Indicate where all changes were made to the Report in the response to comments table.

MPC Response:

The comment is acknowledged.

NMED Comment 2:

All revisions were not identified in the Redline Strikeout (RLSO) version. The RLSO version must identify where all revisions are made to the previous version of the Report, including the revisions made to the tables, charts and figures. Failure to provide an accurate RLSO version slows review, creates the potential for changes to be overlooked, and is misleading. Provide an accurate RLSO version of the revised Report.

MPC Response:

There are two redline strikeout versions included on the enclosed CD. One shows the changes to address the initial comment letter that was submitted in September 2018 and the second has only the changes made per this comment letter.

NMED Comment 3:

The depth-to-water (DTW) measurement data for MKTF wells during the first and second quarters of 2016 are tabulated in Appendix B, *Field Inspection Logs;* however, DTW data for other wells are not tabulated. A table showing the 2016 DTW data for all groundwater monitoring wells must be included in the revised Report. In addition, the DTW tables must include the monitoring well depths, the screened intervals in each well, and the dates and times of measurement as required by the Permit Section IV.L.4.k (2).

MPC Response:

Tables 9.1 and 9.2 are included in the revised Report to show the DTW data for all wells along with additional requested information (e.g., well depths, screen intervals, etc.).

NMED Comment 4:

The Permittee's response to NMED's *Disapproval* Comment 1 states, "[i]t is noted that Gallup Refinery is in the process of installing pneumatic pumps in all existing recovery wells in order to capture non-aqueous phase liquids (NAPL) as well as impacted groundwater." Prior to installation, the Permittee must submit a work plan to NMED for review. Refer also to Comment 9 in the NMED's *Disapproval/or the Revised 2015 Annual Groundwater Monitoring Report,* dated January 4, 2019.

MPC Response:

The comment is acknowledged and the requested work plan was submitted.

NMED Comment 5:
The Permittee's response to NMED's *Disapproval* Comment 4 states, "[i]t is noted that the Gallup Refinery intends to install an interim recovery system in the area to initiate the recovery of impacted groundwater until permanent system can be designed. See response to Item 2 above." The referenced Item 2 is pertaining to the installation of pneumatic pumps in the RW wells located in the tank farm area. Comment 4 pertains to the six recovery sumps (stand pipes) in the hydrocarbon seep area. Interim corrective measures have already been implemented at the hydrocarbon seep area. Clarify the intent of the statement in the revised Report.

MPC Response:
The increase in recovery volumes is now discussed on page 23 and it was further noted that there were no changes in the recovery method that could explain the increase in recovery volumes.

NMED Comment 6:
The Permittee's response to NMED's *Disapproval* Comment 5 states, "[t]he text has been corrected to reference Table 9.1 and 9.2 as requested." Although the text was corrected, Tables 9.1 and 9.2 were not included. Include the tables in the revised Report.

MPC Response:
Tables 9.1 and 9.2 have been added to the Report.

NMED Comment 7:
The Permittee's response to NMED's *Disapproval* Comment 10, Item 7 states, "[t]he discussion has been modified to reflect that the lead concentrations in September and November 2014 exceeded the cleanup standard by a small margin." The lead concentrations in groundwater samples collected from well NAPIS-3 did not exceed standard in either September or November 2014. However, as stated in Comment 10.7, the lead concentrations in the groundwater samples collected from well NAPIS-3 exceeded standard during the third and fourth quarters of 2016. In addition, the text was incorrectly modified to address the exceedance of lead concentrations for well NAPIS-2 rather than NAPIS-3. The discussion is pertinent to NAPIS-3. Revise the response and the Report for accuracy.

MPC Response:
The report (page 33) has been revised to note the exceedance of the screening level of lead at NAPIS-3.

NMED Comment 8:
The Permittee's response to NMED's *Disapproval* Comment 10, Item 8 states, "[t]he discussion has been modified to reflect the detection of the additional constituents." In Section 6.2.2, the Permittee states, "[i]n the fourth quarter well NAPIS-3 had detections below the applicable groundwater protection standards of naphthalene, 1, 1-dicloroethane, 1, 1-dichloroethene, isopropyl benzene, n-butyl benzene, sec-butyl benzene, and cis-bichloroethylene [sic]." These constituents were detected in the first quarter of 2016 rather than the fourth quarter. In addition, there is a typo graphical error (cis-bichloroethylene) in the statement. Revise the Report accordingly.

MPC Response:
The discussion on page 33 has been revised to refer to cis-1,2-dichloroethylene and the reference to fourth quarter has been changed to first quarter.

NMED Comment 9:

The Permittee's response to NMED's *Disapproval* Comment 11, Item 1 states, "[a] discussion of the analytical data obtained from the leak detection system has been added. Gallup Refinery submitted information to the NMED on July 16, 2018 documenting repairs to the NAPIS, therefore, it should be noted that samples collected from the LDUs are not perceived to be wastewater." Comment 11.1 directs the Permittee to include a discussion pertaining to metal detections in wastewater samples collected from West LDU; however, the discussion was not included in the revised Report. Include the discussion in the revised Report. In addition, the Permittee states that the water collected in the LDUs are not wastewater because the NAPIS was repaired. However, the repairs were conducted on September 1, and December 11, 2017. At the time when the samples were collected in 2016, the LDUs were not yet repaired; therefore, the statement is not applicable. Regardless, previous repairs on NAPIS indicated that the attempts did not completely prevent leakage in most cases. The completion of repairs is not always successful. In Section 6.2.3, the Permittee also states, "Artesian flow has been observed from the East LDU wells is the past. The liner of the treatment unit has been evaluated for leaks and appears to be water-tight. For these reasons it appears that the East LDU may have leaks that allow impacted groundwater to enter. Andeavor will further evaluate the possible source of the contaminants detected within the LDU." Explain what is meant by "Artesian flow has been observed from the East LDU." It should be noted that the LDUs are not screened wells; they are constructed with stainless steel pipes directly connected to the secondary containment wall of NAPIS. The Permittee's August 5, 2013 letter titled *API Separator Leak Detection Units,* states, "[t]he water table in this area is approximately 9 - 10 feet below the ground surface. NAPIS-1 total depth is 13.53 feet and NAPIS-2 total depth is 13.61 feet, and the East and West LDUs are approximately 8 - 9 feet below ground surface." Based on the information, groundwater unlikely intersects with the bottom of the LDUs. Even if groundwater intersects the bottom of the LDUs, it will not likely flow into the LDUs because of the nature of their construction unless there are holes in the outer walls of the LDUs. Therefore, the Permittee's discussion does not appear to make sense. Remove the discussion or provide additional details to support the discussion. Revise the Report accordingly.

MPC Response:

Additional discussion has been added to Section 6.2.3 (page 34) regarding detections of metals at the West LDU. The reference to “artesian flow” at the East LDU is due to the fact that when the cap was removed from the sample port, water was present at the top of the tube. The related discussion on page 34 has been removed.

NMED Comment 10:

NMED's *Disapproval* Comment 11, Item 2 states, "[t]he analytical results of VOCs for the third quarter of 2016 are not included in Table 8.10.3. Include the results for the third quarter of 2016 sampling in Table 8.10.3." The analytical results of VOCs for the third quarter of 2016 were not included. Include the results or explain why the results are not included in the revised Report. In Section 6.2.3, the Permittee states,"[c]oncentrations of 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene exceeded the EPA RSL and NMED standards in the East LDU in the first, second and third quarter of 2016." As stated in Comment 11.2, there are no NMED standards for 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene. Revise the Report accordingly.

MPC Response:

The LDUs (all three) were dry during the third quarter sampling event, thus no samples were collected and there are no results reported for the third quarter. The reference to the third quarter

exceedance of standards has been removed. The related discussion on page 34 is revised. The reference to “NMED standards” has been removed on page 34.

NMED Comment 11:

The Permittee's response to NMED's *Disapproval* Comment 11, Item 2 also states, "Tables associated with the Leak Detection Unit have been revised to reflect no cleanup standards exists for 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene." The Permittee revised the tables by removing the EPA Regional Screening Levels (RSLs) for Tap Water; however, Comment 11, Item 2 states that there are no NMED standards for these compounds. It is appropriate to use EPA RSLs for these compounds. Include the EPA RS Ls to evaluate concentrations of 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene. Revise the tables accordingly.

MPC Response:

Table 8.10.3 has been revised to include the EPA RSLs for 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene.

NMED Comment 12

NMED's *Disapproval* Comment 12 states, "[t]he bis(2-ethylhexyl) phthalate concentrations detected in the groundwater samples collected from well OAPIS-1 were above the standard in 2016." The exceedance was not addressed in the Report. Address the exceedance in the revised Report.

MPC Response:

The discussion in Section 6.2.4 (page 35) has been revised to note the exceedance of the bis(2-ethylhexyl) phthalate screening level.

NMED Comment 13:

The Permittee's response to NMED's *Disapproval* Comment 14 states, "MTBE samples will be scheduled for collection from STP1-NW." The response did not fully address Comment 14. MTBE has been analyzed for samples collected from well STPI-NW in the past. Comment 14 directs the Permittee to collect samples from STP-1 to compare MTBE concentrations between the samples collected from STP-1 and well STP1-NW and evaluate potential leaks from STP-1. Revise the response to fully address Comment 14.

MPC Response:

Water samples are collected from STP-1 before it discharges to EP-2 (STP-1 to EP-2) and the results are provided in Table 8.16. As aeration units are continuously operated in STP-1, it may not be possible to collect an “untreated wastewater sample from STP-1” as originally requested in NMED Disapproval Comment 14. MTBE was not detected in these samples collected in 2016.

NMED Comment 14:

The Permittee's response to NMED's *Disapproval* Comment 18 states, "[l]anguage acknowledging the detections has been added as well as proposed changes to sampling frequency and modifications to the sampling plan regarding frequency of sample collection for OW-50 and 52." Section 6.3.2 states that the Facility Groundwater Monitoring Plan will also be modified to reflect the more frequent sampling schedule as will Table 1, Section 10 (sampling frequency) of this report as well as the Facility Wide Groundwater Monitoring Plan. The referenced table (Table 1, Section 10) is not included in the Report. Include the table in the revised Report.

MPC Response:

The table in Section 10 has been added to the Report and the sampling frequency was changed to quarterly for OW-50 and OW-52.

NMED Comment 15:

The Permittee's response to NMED's *Disapproval* Comment 20 states, "[t]he last report that included VOCs was submitted August 24, 2016 and no organic constituents were detected [in the samples collected from the PW wells]." However, Section 6.4.1 of the Report states, "[t]here were a total of five organic constituents detected in PW-3 all at concentration below the applicable standards in 2016 ... 10 organic compounds were detected at concentration levels below the applicable standards in PW-4." The response contradicts the 2016 analytical results. Provide more detailed explanation for the response and provide a copy of the August 24, 2016
report.

MPC Response:

The response was simply noting the results of the additional samples collected pursuant to the requirements of the NMED Drinking Water Program. The requested Drinking Water Report results are enclosed showing sample results for 2016.

NMED Comment 16:

The Permittee's response to NMED's *Disapproval* Comment 23, Item 1 states, "[w]ells contained SPH them [sic] are identified in the data summary tables. The requested revisions have been added to the report." The data tables of the 2016 third and fourth quarter measurements for the MKTF wells are not included. Include the data tables in the revised Report. In addition, Section 6.6 was revised to state, "[d]uring the fourth quarter 2016, SPH was detected in wells MKTF-01 (1.35'), MKTF-26 (1.39'), MKTF-23 (0.12'), MKTF-14 (1. 10'), MKTF-13 (0.96'), MKTF-12 (0.29'), MKTF-37, MKTF-45 (0.46')." SPH was detected in other MKTF wells that were not listed in the statement during the first and second quarters of 2016 as well. Section 6.6 must include the discussion regarding the detections of SPH in the MKTF wells during all quarters of 2016. Revise the Report accordingly.

MPC Response:

The data tables of the third and fourth quarter measurements for the MKTF wells are provided in Table 9.2. The discussion in Section 6.6 on page 43 has been revised to summarize all of the detections of SPH in 2016.

NMED Comment 17:

NMED's *Disapproval* Comment 23, Item 11 states, "[a]ccording to Table 8.17.1, the sulfate concentrations in the groundwater samples collected from wells MKTF-29 and MKTF-43 exceeded the standard in 2016. Include and discuss the exceedance in the revised Report." Although the Permittee's response states that the requested revisions have been added to the Report, the revisions were not included in the Report. Include and discuss the exceedance in the revised Report.

MPC Response:

The exceedances of sulfate have been added to the discussion in Section 6.6 and correction was made to remove the discussion of sulfate that was under the total metals discussion.

NMED Comment 18:

NMED's *Disapproval* Comment 23, Item 13 states, "[t]he total barium concentrations in the groundwater samples collected from wells MKTF-18 through MKTF-22 also exceeded the standard in 2016." The discussion regarding the exceedances in the samples collected from wells MKTF-18 and 22 were

included in the Report; however, the exceedances in wells MKTF-19, 20 and 21 were not discussed. Include the discussion regarding the barium concentration exceedances in groundwater samples collected from wells MKTF-19, 20 and 21 in the revised Report.

MPC Response:

The Report (Section 6.6) was revised to include MKTF-19, -20, and -21 as exceeding for total barium. It was also observed that the text incorrectly identified MKTF-2 as exceeding for total barium instead of MKTF-1 and this was revised.

NMED Comment 19:

NMED's *Disapproval* Comment 23, Item 17 states, "[b]utylbenzene is not listed in Table 8.17.4, *MKTF WELLS Semi-Volatile Organic Compound Analytical Result Summary.*" Butylbenzene is listed as one of SVOCs that were detected above the standard in Section 6.6 of the Report; however, Table 8.17.4 does not list butylbenzene. Either the text of the Report in Section 6.6 or Table 8.17.4 must be corrected to resolve the discrepancy. Revise the Report accordingly.

MPC Response:

The reference to butylbenzene in Section 6.6 has been removed from the Report as it was apparently confused with butyl benzene phthalate.

NMED Comment 20:

The Permittee's response to NMED's *Disapproval* Comment 24 states, "Gallup Refinery is not aware of any discharges to the ponds that could result in such BTEX detections." However, BTEX concentrations have been detected in samples collected from the ponds. If there are no discharges to the ponds other than-from STP-1, either the wastewater treatment system is not capable of removing BTEX or BTEX leached into the ponds from groundwater. Evaluate wastewater treatment system breakthrough for BTEX constituents. Also, compare the depths of the ponds where BTEX were detected to evaluate whether groundwater potentially leaches into the ponds. Since the ponds are unlined earthen structures, if groundwater potentially leaches into the ponds, the water stored in the ponds also may migrate to groundwater. In this case, the integrity of the ponds must be evaluated. Include the discussion in the revised Report.

MPC Response:

A review of the water levels in the ponds in comparison to the potentiometric surface of the groundwater in nearby monitoring wells shows a consistent downward gradient such that groundwater would not be “leaching” into the ponds. An examination of historical water analyses for samples collected at the STP-1 to EP-2 outfall before 2016 indicates that benzene was discharged in the past and possibly that could explain the low detections observed in 2016.

NMED Comment 21:

The Permittee's response to NMED's *Disapproval* Comment 25, Item 5 states, "[t]he requested revisions were added to the report." Section 6.7.1 was revised to state, "[s]ee table 8.15.4 for a complete list of VOCs." However, the revision was incorrect. The revision must be made to state, "[s]ee Table 8.15.5 for a complete list of SVOCs" because the relevant text discusses the detection of SVOCs. Revise the Report accordingly.

MPC Response:

The reference in Section 6.7.1 has been changed from 8.15.4 to 8.15.5.

NMED Comment 22:
The Permittee's response to NMED's *Disapproval* Comment 29 states, "[t]he requested revisions were added to the report." Section 7.1 was revised to state, "[f]ive organic constituents were detected at concentration levels below the applicable standards in 2016 (Benzoic acid, bis(2-ethylhexyl) phthalate, di-n-octyl phthalate, dimethyl phthalate, and phenol)." The revision was incorrect. The detection of phenol is not recorded while the pyrene concentration is reported as 0.0046 mg/L in the sample collected from well SMW-2 according to Table 8.3.4. Revise the Report accordingly.

MPC Response:
The reference to phenol in the discussion in Section 7.1 (page 50) has been revised to reference pyrene.

NMED Comment 23:
NMED's *Disapproval* Comment 34 states, "[a] column listing barium concentrations is missing from Table 8.8.3. Include the column for barium concentrations on Table 8.8.3 in the revised Report." The column was still missing from the Report. Include the column for barium concentrations in the table in the revised Report.

MPC Response:
The column in Table 8.8.3 for dissolved barium has been added. The discussion in Section 6.2.2 (page 33) has been revised to correct errors regarding the detection of dissolved metals.

NMED Comment 24:
The Permittee's response to NMED's *Disapproval* Comment 40 states, "[t]he source of the cyanide is unknown as it is not used as a feedstock in any of the processes at the refinery." Although cyanide is not used as a feedstock, Fluid Catalytic Cracking Unit (FCCU) may generate cyanides in the waste stream and some crude oil may contain cyanide. An increase of cyanide concentrations in the groundwater samples collected from well OAPIS-1 was observed and must be closely monitored.

MPC Response:
The comment is acknowledged.

NMED Comment 25:
The Permittee's response to NMED's *Disapproval* Comment 45 states, "[a]n attempt was made to locate all records of spills, leaks and releases in order to update the report. A revised summary is provided in Appendix E of the attached report." Since no additional spill record was included between October 5, 2016 and the end of 2016, it is not clear which parts in the summary (Appendix E) were updated. Comment 45 requires the Permittee to clarify whether leaks, spills or releases have occurred between October 5, 2016 and December 31, 2016. The clarification is not provided. Indicate which parts in Appendix E were updated in the revised Report.

MPC Response:
No additional spills, leaks, or releases were identified for 2016. There are no changes to Appendix E.

NMED Comment 26:
In Section 6.6, *Constituent Levels for MKTF Wells,* the Permittee states, "[c]hloride concentration exceedances above the standard (250 mg/L) were found in the following wells: MKTF-1, MKTF-2, MKTF-10, MKTF-11, MKTF-15, MKTF-16, MKTF-20, MKTF-15, MKTF-24, MKTF-25, MKTF-26, MKTF-27, MKTF-28, MKTF-30, MKTF-31, MKTF-32, MKTF-34, MKTF-38, MKTF-39, MKTF-40, MKTF-41, MKTF-42, MKTF-43, and MKTF-44 (Table 8.17.1)." MKTF-15 is listed twice. Remove the repetition from the revised Report.

MPC Response:
The duplicate reference to MKTF-15 in Section 6.6 was removed.

NMED Comment 27:
In Section 6.6, *Constituent Levels for MKTF Wells,* the Permittee indicates the screening levels for 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene as "no cleanup standard in guidance". Although there are no NMED standards for 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene, it is appropriate to use EPA RSLs for these compounds. Refer to Comment 11. Include the EPA RSLs to evaluate the detections of l,2,4-trimethylbenzene and 1,3,5-trimethylbenzene. Revise the Report accordingly.

MPC Response:
The references to "no cleanup standard in guidance" have been deleted from the discussion in Section 6.6 and the EPA RSLs were restored in the table; refer to Comment 11 above.

NMED Comment 28:
In Section 6.7.1, *Evaporation Ponds 1 through 12B,* the Permittee states, "[t]he presence of Escherichia coli in water is used as an indicator of fecal contamination, but recent reports indicate that soil populations can also be detected in tropical, subtropical, and some temperate environments. The presence of significant populations of naturalized populations of E. coli in temperate soils may confound the use of this bacterium as an indicator of fecal contamination." According to Section 1.3, *Site Characteristics,* at least three off site ponds are present near the refinery. Propose to collect the water samples from the offsite ponds to compare e-coli concentrations in the water samples to the e-coli concentrations in ponds EP 1 through EP 12B, if necessary. Evaluate whether the cause of elevated e-coli concentrations is fecal in the revised Report, if necessary.

MPC Response:
As noted in Section 1.3, the three ponds are located off-site. These off-site ponds are not accessible to MPC. Perhaps NMED can use its authority to gain access to these locations for future sampling, which of course should be discussed in future monitoring reports and not past reports as any "new data" was not available during the subject 2016 reporting period.

The comment further instructs Western to evaluate "whether the cause of elevated e-coli concentrations is fecal." That evaluation was completed during preparation of the 2016 report and the subsequent findings included in Section 1.3. Further review regarding potential sources of e-coli identified the following "*Escherichia coli* (abbreviated as *E. coli*) are bacteria found in the environment, foods, and intestines of people and animals. *E. coli* are a large and diverse group of bacteria." The source of this description is www.usgs.gov/special-topic/water-science-school/science/bacteria-and-e-coli-water. This further supports the earlier findings that e. coli may generally be found in the "environment" although it is routinely attributed to either human or animal wastes.

NMED Comment 29:
In Section 7.2, *Group B - Groundwater Monitoring,* the Permittee states, "[b]oth LDUs continue to be pumped on a regular basis. The East Bay of the LDU was out of service and closed in 2015. The presence of water in the East LDU during that period suggests that there may be an inflow of groundwater through an opening in the liner. Andeavor intends to conduct testing on the LDU to ascertain the source of the water in the East LDU. Recent water column measurements on the West LDU also indicate that the bay is leaking into the LDU, or that there is a source of inflow into the LDU. Plans are to inspect the east bay, place it back in service and then take the west bay out of service for inspection." It is not likely that groundwater flows into the LDUs. Refer to Comment 9. Remove the statement or provide

additional details to support the statement. Revise the Report accordingly. In addition, clarify whether the inspection of the bays is currently planned or the plans have already been already executed in 2017. If there are still ongoing leaks (e.g., detection of wastewaters in the LDUs), the Permittee must propose to submit a work plan to inspect and repair the NAPIS.

MPC Response:

The reference to "groundwater" in the discussion in Section 7.2 (page 51) has been removed so that the text only notes there may be inflow through an opening in the liner without identification of an actual source.

Of course, the Report was prepared in 2017 to describe actions taken in 2016 and the recommendations discussed future plans. See Comment 9 above regarding subsequent actions regarding the LDUs. No revisions are made to the report per this comment as the subsequent actions occurred during later reporting periods.

Attachment A. Revised Groundwater Monitoring Report

Revised: Annual Groundwater Monitoring Report Gallup Refinery – 2016

Western Refining
Gallup, New Mexico
September 2018

CERTIFICATION

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision according to a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

EXECUTIVE SUMMARY

The Annual Groundwater Monitoring Report for 2016 (Report) incorporates all of the field monitoring, sampling, and inspection of active wells located on the facility. Analytical data and field notes are incorporated into this report to show any changes or discoveries of various constituents found in the groundwater collected for sampling. On February 15, 2012, Groundwater Discharge Permit GW-032 was rescinded by the Oil Conservation Division (OCD) of New Mexico. We are: however, required to continue to abate pollution of groundwater pursuant to 19.15.30 NMAC (Remediation) under case number AP-111 with remediation activities already in place under Groundwater Discharge Permit GW-032. Monitoring and field work activities conducted for 2016 followed the guidelines of the "Approval with Modifications, Annual Facility-Wide Ground Water Monitoring Report: Gallup Refinery 2013, HWB-WRG-14-006", dated May 18, 2016 from New Mexico Environmental Department Hazard Waste Bureau (NMED HWB).

GROUNDWATER MONITORING

There are 87 monitoring wells located throughout the refinery property that are subject to the ground water monitoring program. The groundwater program consists of a number of sampling locations, target analyses, and monitoring frequencies which are monitored on a quarterly, semi-annual, and annual basis. A brief analytical summary is included while a more detailed summary is discussed in Section 7. In addition to the monitoring wells, there are three leak detection units (LDUs) at the new API Separator (NAPIS). These monitoring wells and LDUs have been grouped as follows:

GROUP A	GROUP B	GROUP C	GROUP D	GROUP E
BW-1A, 1B, 1C	GWM-1, 2, 3	OW-13, 14, 29, 30	PW-2, 3, 4	MKTF-1 thru
BW-2A, 2B, 2C	NAPIS-1, 2, 3, KA-3	OW-50, 52	OW-1, 10	MKTF-45
BW-3A, 3B, 3C	OAPIS-1	RW-1, 2, 5, 6	OW-11, 12	
MW-1, 2, 4, 5	East LDU, West LDU, Oil Sump LDU			
SMW-2, 4	STP1-NW, STP1-SW			

GROUP A - WELLS

There are a total of nine boundary wells located on the northwest section of the refinery property. Three (BW-1A, 1B, 1C) are located between evaporation ponds 7 and 8, and three (BW-2A, 2B, 2C) are located on the west end of evaporation pond 11. BW-3A, 3B, 3C are located on a flat terrain directly northwest of Evaporation pond 12A. Three of the nine wells (BW-1A, BW-1B, and BW-3A) continue to indicate no water level since original installation in 2003 and 2004.

- No benzene, toluene, ethylbenzene, or total xylenes (BTEX) or methyl tert butyl ether (MTBE) constituents have been detected in any of the boundary wells to date.
- Bis(2-ethylhexyl)phthalate was first detected in BW-3B in 2009, BW-3C in 2011, and in BW-1C in 2013. The detection of this organic compound is suspected to be a laboratory contaminant or possibly from the polyvinyl chloride (PVC) pipe materials used in the well. Subsequent annual sample results have indicated non-detectable levels of the organic constituent in each of these wells.

Within this area of the refinery, three Resource Conservation Recovery Act (RCRA) land treatment units (LTU) exist. Each of the three LTU cells measure 480 feet x 240 feet and received hazardous waste application until 1990. Non-hazardous waste application ceased in 1993. Each section is diked and encompasses a surface area of 2.6 acres.

The MW series (MW-1, 2, 4, and 5) and SMW series (SMW-2, 4) of wells were installed to monitor the detection of hazardous constituents from the LTU in groundwater. On the northern edge (downgradient) of the LTU are three monitoring wells (MW-1, SMW-4 and MW-2) and along the eastern edge of the LTU are two monitoring wells (MW-5 and SMW-2). MW-4 is located on the northwest corner of evaporation pond 2 (EP-2) and was installed as a background monitoring well. A summary of the laboratory analyses for these wells through 2016 includes:

- Detection of MTBE in low concentrations in SMW-2 from 2008 through 2016.
- Manganese has been detected at concentration levels above the WQCC standard since 2012 in SMW-2.

In addition to the annual sampling requirements, the LTU monitoring wells are on a once every ten year sample schedule per the RCRA Post-Closure Care Permit. The next RCRA Post-Closure Care Permit sample event is scheduled to occur in 2019.

GROUP B - WELLS

The Group B wells are located near the aeration basin. Wells GWM-1, GWM-2 and GWM-3 are located on the west edge of Aeration Lagoon 2 (AL-2) and Pond 1. The NAPIS-2, NAPIS-3, and KA-3 wells are adjacent to the west bay of the New American Petroleum Institute Separator (NAPIS) and NAPIS-1 is located upgradient on the southeast side of the east bay of the NAPIS. There are three leak detection units (LDU) located on the east and west bay of the NAPIS, identified as follows:

- West LDU is located on the west bay of the NAPIS unit;
- The Oil Sump LDU is located on the northeast section of the east bay of the NAPIS unit; and
- East LDU is located on the southeast section of the east bay of the NAPIS unit.

In July 2012, a well (OAPIS-1) was installed on the northwest side of the Old API Separator. The installation of this well resulted from the Solid Waste Management Units (SMWU) No. 1, Aeration Basin and SMWU No. 14, Old API Separator site investigation. The investigation work was implemented to determine if there had been a release from the aeration basin or Old API Separator and to delineate impacts associated with any such releases. Information collected from this site investigation is also used to track groundwater in monitoring wells GWM-2 and GWM-3.

Two monitoring wells (STP1-NW and STP1-SW) were installed at the new sanitary treatment pond in May of 2014. STP1-NW is located on the west end of the north bay of STP-1, and STP1-SW is located on the southwest corner of the south bay of STP-1. Both of these wells were added to the ground water sampling plan, however, STP1-SW has remained dry since it was installed.

A brief summary of laboratory analyses for the Group B wells for 2016 is listed below:

GWM 1, GWM-2, GWM-3

- No groundwater was present in GWM-2 and GWM-3 in 2016.
- No samples have been collected from GWM-1 since the third quarter 2015 due to the detection of an SPH level.

NAPIS-1, NAPIS-2, NAPIS-3, and KA-3

- Elevated concentrations of MTBE continue to be detected in NAPIS-2 throughout most of 2016. MTBE was also detected above the screening level in first quarter 2016 in NAPIS-3 and benzene was detected slightly above the screening level in KA-3 in the third quarter of 2016.

- DRO/GRO have been detected in NAPIS-2 in 2016 and DRO in NAPIS-3 in the fourth quarter 2016 and GRO in KA-3 in all four quarters of 2016.
- Barium, iron and manganese were detected in NAPIS-2 at concentration levels exceeding the applicable standards in 2016.
- Iron was detected in all four quarters of 2016 in NAPIS-3 at concentration levels exceeding the WQCC standards. Iron was detected in KA-3 in the fourth quarter of 2016 at concentration level exceeding the WQCC standard.
- Manganese was detected in all four quarters of 2016 above the applicable standard in KA-3 NAPIS-2 and NAPIS-3.
- Naphthalene and 1-methylnaphthalene were detected exceeding the applicable standards for NAPIS-2 in the third quarter of 2016.

East LDU, West LDU and Oil Sump LDU

- No water has been detected in the Oil Sump LDU since June 2013.
- Benzene and xylenes were detected in the East and West LDUs at levels exceeding applicable standards in 2016.
- In 2016, chromium, iron, and manganese have been detected in concentrations exceeding applicable standards in both the East and West LDUs.
- The organic constituents 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene have shown concentrations exceeding applicable standards in both the East and West LDUs in 2016.

OAPIS-1

- Benzene and MTBE have exceeded the applicable standards since 2013.
- Concentrations of fluoride and chloride, DRO and GRO have shown exceedances in OAPIS-1 since 2013.
- Arsenic, iron, and manganese have exceeded applicable standards in OAPIS-1 since 2013. Cyanide exceeded the screening level in the fourth quarter of 2016.
- Detections of 1,2-Dichloroethane (EDC), 1-methylnaphthalene and bis(2-ethylhexyl) phthalate have been detected in concentrations exceeding applicable standards in 2016.

STP1-NW and STP1-SW

- No water has been detected in STP1-SW since its installation in 2014.
- There were no detections of BTEX, MTBE, DRO, GRO, or MRO above applicable standards in 2016 in STP-1 NW.
- Chloride exceeded applicable standards in 2016 and iron was detected in the first and second quarter of 2016 at concentration levels which exceeded applicable standards.

GROUP C WELLS

Group C wells include six observation wells and four recovery wells. Observation well OW-14 is adjacent to the liquefied petroleum gas (LPG) compound while OW-13, OW-29, and OW-30 are located north of the tank farm. Observation wells OW-50 and OW-52 were installed in 2009 per NMED and monitors the potential for contaminant migration offsite. Recovery well RW-1 is located within the tank farm east of Tank 568 while RW-2 is located on the southwest side of Tank 576. Recovery well RW-5 and RW-6 are located northeast of Tank 345. The recovery wells were installed during a subsurface investigation conducted between 1987 and 1992 near the tank farm. BTEX concentrations and separate-phase hydrocarbons (SPH) were detected in the ground water and SPH recovery continues quarterly. When applicable, recovery is completed using a disposable hand-bailer in RW-5 and RW-6 and completed in RW-1 using a portable submersible pump. Measureable SPH has not been detected in RW-2. SPH was not detected in RW-5 and RW-6 during all of 2016. The SPH column thickness in RW-1 has increased during 2016.

A summary of the observation wells and recovery well laboratory analyses through 2016 is as follows:

OW-13, OW-14, OW-29, OW-30, OW-50, and OW-52

- Benzene has exceeded the EPA MCL standard in OW-14 since 2008 through 2016. MTBE concentrations have shown exceedances in OW-14, OW-29, and OW-30 since 2007 (2010 for OW-29) through 2016. No BTEX or MTBE constituents have been detected in OW-13, OW-50, and OW-52 above screening levels.
- Chloride has been detected above applicable standard in OW-14 from 2013 through 2016.
- DRO and GRO have been detected in OW-14, OW-29 and OW-30 in 2016.

RW-1, RW-2, RW-5, and RW-6

- BTEX concentrations have exceeded standards in RW-1 and RW-2 since 2011. RW-5 and RW-6 have exceeded standards for benzene from 2011 to present. Total xylenes concentrations exceeded the standard for RW-6 from 2012 through 2016.
- During 2016, the organic constituents 1,2,4-trimethylbenzene exceeded the applicable standards in RW-2. In RW-5 and RW-6, the organic constituents 1,2,4-trimethylbenzene, naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene concentrations exceeded the applicable standards in 2016.

Hydrocarbon recovery from RW-1 has shown a steady decrease from 2005 through 2016. It is common for hydrocarbon recovery to decline over time, as the readily recoverable hydrocarbons is removed from the

formation. From a review of the hydrocarbon recovery log for RW-1 in Appendix A, it appears the recovery pump was initially (Feb 2005) operated in a continuous mode while recovery rates were higher. In March 2005, the recovery of SPH was reported at 48 to 74 gallons per week. By July and August, the reported recovery had declined to 18 to 28 gallons for an approximate three week recovery period. In December 2005, the recovery for two weeks had declined to five gallons of SPH. With the declining recovery volumes of SPH, the recovery method was changed to hand bailing in 2007. The recovery method reverted to using a bladder pump in 2008; however, due to the low recovery volumes the recovery was conducted in conjunction with purging the well for sampling and the pump was not operated on a continuous basis.

An increase in measured product thickness was recorded starting in 2013. The level measured in October 2012 was 0.09 feet and showed a sustained increase over time to 4.93 feet in November of 2014. A similar increase in SPH thickness occurred in late 2007 through 2009, with the product thickness decreasing to less than 0.6 feet through late 2012. In 2014, total hydrocarbon recovery is estimated at 8.5 gallons in 53 gallons of water purged compared to the 2005 estimate of 431 gallons of hydrocarbons in 1,210 gallons of water. A drop-in 3" diameter x 24" long bladder pump with suction at the top of the pump was used to purge water/hydrocarbons from this well until pump lost suction. The recovery well was never completely purged dry due to suction of the submersible pump being at the top, which left approximately 24" of product/water level remaining in RW-1. The recovered water/hydrocarbon mixture was pumped into a 55 gallon drum and the visible hydrocarbon layer thickness was measured and estimated as to volume of hydrocarbons recovered in gallons (not an accurate assessment) No measureable hydrocarbons have been detected in RW-2 since its been installed. SPH has not been detected in RW-5 and RW-6 since February 2009 and November 2011, respectively.

GROUP D WELLS

The Group D wells can be found within the refinery property and include three process/production wells (PW-2, PW-3 and PW-4) and four observation wells (OW-1, OW-10, OW-11, and OW-12). The process/production wells are used to provide process water for the refinery and drinking water for both the refinery and the Travel Center. PW-2 is located on the central west side of the refinery directly west of Evaporation Pond 6 (EP-6). PW-3 is centrally located on the refinery property north of the maintenance

shop and west of the domestic water tank Z-86-T2 and PW-4 is located south of the Pilot Lift Station. Each of the PW wells is screened at a depth of 1,000 feet. The observation well OW-1 is found west of PW-2 and is a flowing artesian well. Observation well OW-10 is located east of Evaporation Pond 9 (EP-9), OW-11 is located on the west side of the main access road, and OW-12 is centrally located west of the refinery tank farm.

A summary of the Group D Wells laboratory analyses through 2016 are as follows:

PW-2, PW-3, and PW-4

- No BTEX or MTBE constituents were detected in the process wells in 2016.
- Low concentrations of fluoride, chloride and sulfate were detected in PW-3.
- Low concentrations of arsenic, barium and iron were detected in PW-3 and PW-4 in 2016 at concentration levels below applicable standards.
- Two organic constituents were detected at levels below applicable standards in PW-3 and PW-4 in 2016 (bis(2-ethylhexyl) phthalate and di-n-octylphthalate). Low concentrations of 1,2,4 trimethylbenzene, 1,3,5 trimethylbenzene, naphthalene, 1-methyl naphthalene, 2-methylnaphthalene, benzoic acid, diethyl phthalate and dimethyl phthalate were also detected in PW-4 in the first half of 2016.

OW-1, OW-10, OW-11, and OW-12

- Low concentrations of benzene and ethylbenzene were detected in OW-1 during the last quarter of 2016, and low concentrations of MTBE were detected in OW-1 and OW-10 during all four quarters in 2016.
- Iron concentrations exceeded the WQCC standard in OW-1 during the third quarter of 2016.
- Chloride concentrations exceeded the WQCC standard in OW-10 in 2016.

GROUP E WELLS

To date, a total of 44 monitoring wells (MKTF-1 through MKTF-44) have been installed to aid in delineating the extent of a hydrocarbon seep discovered in 2013 in an isolated area approximately 100 yards west of the crude tanks T-101 and T-102. A pre-existing well located in the seep investigation site area located on the west end of the loading rack was added to the marketing wells and has been labeled as MKTF-45. Site investigations have included excavations within the seep area, soil/water samples, and the installation of six temporary sumps to recover the non-aqueous phase liquid (NAPL). Liquid recovery from the six sumps in 2016 is estimated at 366,287 gallons of NAPL and ground water. A hole was identified in the refinery's waste water process sewer line near the bundle cleaning pad and an underground leaking transmix transfer

line was also identified in the vicinity. Interim measures are on-going to identify any other potential sources of the hydrocarbon seep. An estimated 11.2 gallons of hydrocarbons was recovered from eleven of the MKTF wells in 2015. Hydrocarbon recovery from six temporary sumps is on-going. The measured SPH thickness is shown on Figure 13.

The MKTF wells are sampled quarterly. BTEX, MTBE, DRO, GRO, total and dissolved metals and several VOCs and SVOCs have been detected in many of the wells above the referenced standards. See Tables 8.15 thru 8.15.5 (Appendix G) for a complete list of constituents analyzed.

ADDITIONAL SITES MONITORED

The new waste water treatment plant (WWTP) and the new holding pond Sanitary Treatment Pond (STP-1) were completed and put in service in May of 2012. All waste water flow was routed to the WWTP in May 2012 and in January 2013, the demolition and removal of the benzene strippers was completed. Pilot effluent was routed to the WWTP in June of 2013 and the aeration lagoons and pond 1 were taken out of service and no longer received any flow. All influent and effluent sampling continued between lagoons and pond 1 as long as there was continued gravitational flow.

Outfall BW to EP-2

- Reverse Osmosis (RO) water from the boiler unit was re-routed back into the process and no longer discharges to evaporation pond 2.
- First quarter 2016 samples indicate sulfate was the only constituent that exceeded applicable WQCC standards.

Outfall STP1 to EP-2

- The EP-2 Inlet designation was changed to STP1 to EP-2 in the second half of 2012 as flow to the aeration lagoons and pond 1 were diverted to the new WWTP. Aeration lagoons and pond 1 were taken out of service and no longer receiving flow. STP-1 effluent now flows into the northeast corner of EP-2. The outfall is sampled on a quarterly basis.
- DRO concentrations were detected in 2016 and TDS concentrations have exceeded the WQCC applicable standard since 2010.
- Three volatile organic compounds were detected at below applicable standards in 2016.

ADDITIONAL APPLICABLE STANDARDS REQUIREMENTS

The Discharge Permit was rescinded by NM-OCD on February 15, 2012; however Gallup is still required to continue with abatement of pollution of groundwater pursuant to 19.15.30 NMAC (Remediation), under Abatement Plan AP-111, with remediation activities already in place.

SECTION 1

INTRODUCTION

The 2016 Annual Groundwater Monitoring Report has been prepared to describe monitoring and remediation activities undertaken throughout 2016. Groundwater sampling is performed on a quarterly, semi-annual and annual basis and includes sampling of the evaporation ponds located on the northwest section of the refinery property. The activities completed include analysis of all active monitoring wells and evaporation ponds. The data generated is used to characterize the nature and extent of impacts to the groundwater at the refinery from historical releases and to monitor any levels of constituents that exceed applicable standards.

This report presents the results of the groundwater monitoring activities and contains the following information:

- Scope of activities
- Sampling methods and procedures
- Groundwater elevation surveys
- Regulatory criteria
- Groundwater monitoring results
- Conclusions and recommendations

1.1 FACILITY OWNERSHIP, OPERATION AND LOCATION

This report pertains to the Western Refining Southwest Inc., Gallup Refinery, located at Exit 39 on Interstate I-40, approximately 17 miles east of Gallup, New Mexico, in Jamestown, New Mexico. Figure 1 shows the regional location of the refinery.

Owner: Western Refining (Parent Corporation)
123 West Mills Avenue, El Paso, TX 79901

Operator: Western Refining Southwest, Inc. (Postal address)
Gallup Refinery
92 Giant Crossing Road, Gallup, NM 87301

Western Refining Southwest, Inc. (Physical address)
Gallup Refinery
I-40, Exit 39, Jamestown, New Mexico 87347

The following regulatory identification and permit governs the Gallup Refinery:

- SIC code 2911 (Petroleum Refining) applies to the Gallup Refinery
- U.S. EPA ID Number NMD000333211 RCRA Post-Closure Care Permit
- OCD Abatement Plan, number AP-111
- 2015 NPDES MSGP, ID #NMR053168

The refinery status is corrective action/compliance. Annual, semi-annual, and quarterly groundwater sampling is conducted at the refinery to evaluate present conditions. The refinery is situated on an 810 acre irregular shaped tract of land that is substantially located within the lower one-quarter of Section 28 and throughout Section 33 of Township 15 North, Range 15 west, of the New Mexico Prime Meridian. A small component of the property lies within the northeastern one-quarter of Section 4 of Township 14 North, Range 15 West. Figure 2 is a topographic map showing the general layout of the refinery in comparison to the local topography.

1.2 2 BACKGROUND INFORMATION

The refinery primarily receives crude oil via two 6-inch diameter pipelines; two pipelines from the Four Corners Area enter the refinery property from the north. In addition, the refinery also receives natural gasoline feed stocks via a 4-inch diameter pipeline that comes in from the west along the Interstate 40 corridor from the Wingate Plant, formerly Conoco gas plant. Crude oil and other products also arrive at the site via railroad cars. These feed stocks are then stored in tanks until refined into products.

The refinery incorporates various processing units that refine crude oil and natural gasoline into finished products. These units are briefly described as follows:

- Crude Distillation Unit: separates crude oil into various fractions; including gas, naphtha, light oil, heavy oil, and residuum
- Fluidized Catalytic Cracking Unit (FCCU): dissociates long-chain hydrocarbon molecules into smaller molecules, and essentially converts heavier oils into naphtha and lighter oils.
- Alkylation Unit: combines specific types of hydrocarbon molecules into a high octane gasoline blending component.
- Reforming Unit: breaks up and reforms low octane naphtha molecules to form high octane naphtha.
- Hydro Treating Unit: removes undesirable sulfur and nitrogen compounds from intermediate feed stocks, and also saturates the feed stocks with hydrogen to make diesel fuel.
- Additional Treater Units: remove impurities from various intermediate and blending feed stocks to produce finished products that comply with sales specifications.
- A set of Acid Gas Treating and Sulfur Recovery Units: convert and recover various sulfur compounds from other processing units in order to produce either ammonium thiosulfate or a solid elemental sulfur byproduct.
- Waste Water Treatment Plant – process and treat refinery waste and storm water before releasing to treatment ponds.

As a result of these processing steps, the refinery produces a wide range of petroleum products including propane, butane, unleaded gasoline, diesel, kerosene, and residual fuel. In addition to the aforementioned processing units, various other equipment and systems support the operation of the refinery and are briefly described as follows:

- Storage tanks are used throughout the refinery to hold and store crude oil, natural gasoline, intermediate feed stocks, finished products, chemicals, and water. These tanks are all located aboveground and the capacity ranges from 80,000 barrels to less than 1,000 barrels.
- Pumps, valves, and piping systems are used throughout the refinery to transfer various liquids among storage tanks and processing units.
- A railroad spur track and a railcar loading rack are used to transfer feed stocks and products from refinery storage tanks into and out of railcars.
- Several tank truck loading areas are used at the refinery to load out finished products and also may receive crude oil, other feed stocks, additives, and chemicals.

Gasoline and diesel are delivered to the Travel Center via tanker truck. An underground diesel pipeline exists between the refinery and the Travel Center. As a result of an off-refinery release in 2011, the pipeline was purged of product, filled with nitrogen and temporarily taken out of service. Western worked with the

NMED – PSTB (Petroleum Storage Tank Bureau) and the NM OCD (Oil Conservation Division) to place this line back in service. In 2013 the underground diesel line from the Gallup Refinery to the Travel Center was replaced. The replaced line runs above ground from the marketing area of the refinery for approximately 150 feet and continues underground to the Travel Center. The diesel line was re-commissioned and put back in service on February 3, 2014.

A designated area is used to conduct employee firefighting training. During these training activities waste water and/or wash water drains directly into a dedicated tank that is located in the vicinity. The waste water is removed via vacuum truck and drained into a process sewer leading to the NAPIS after each training exercise. Oily water and sludge is transferred via vacuum truck to the NAPIS for processing and oil-water separation. The process waste water system is a network of curbing, paving, catch basins, and underground piping that collects waste water effluent and stormwater runoff from various processing areas within the refinery. The waste water effluent flows into T-27, T-28 and into T-35 (which works in parallel to T-27 and T-28) and into the NAPIS which provides the first stage oil-water separation where the removal of free oil is separated from waste water by gravity. The clarified water is routed to the waste water treatment plant (WWTP) Dissolved Gas Flotation (DGF) system which provides the second stage oil-water separation process. The DGF process involves the pressurization of waste water in the presence of air or nitrogen, creating a super-saturated solution called coagules that are carried to the surface. The float is removed to disposal by mechanical float scrapers and the effluent is recycled back to the flotation chamber. The skimmed float is sent to the DGF float management system, “float tanks”. Oily solids collected in the float tanks are recycled through the refining process (on-site) or handled as a K048 listed hazardous waste for proper disposal.

The clarified effluent from the DGF system was designed with the Macro Porous Polymer Extraction (MPPE) system however, the MPPE unit did not perform as expected from a flow rate standpoint. It removed benzene efficiently, but became plugged so that flow rates decreased below adequate levels. In December 2014, the MPPE was removed from service and replaced with the carbon canister system. The two systems ran in parallel for three months in the second half of 2014 followed by trial with carbon canisters for two months before the MPPE was removed from service. Flow rates up to 500 GPM can now be achieved through the carbon system. The waste water that passes through the carbon canisters

discharges into the sanitary treatment pond (STP-1). STP-1 has two bays, north and south and each bay is equipped with five aerators. The treated waste water is mixed with air in order to oxidize any remaining organic constituents and increase the dissolved oxygen concentration available in the water for growth of bacteria and other microbial organisms. The microbes degrade most of the hydrocarbons into carbon dioxide and water. Five 15-hp mechanical aerators provide aeration in each bay (North and South) in STP-1. Effluent from STP-1 then flows into evaporation pond 2 (EP-2) and is gravitated to the rest of the ponds. The initial startup of the new WWTP was in May of 2012 which resulted in the decommissioning of Benzene Strippers 1, 2, and 3, and the Aeration Lagoons 1 and 2 (AL-1 and AL-2). In November of 2012, the benzene strippers were taken off-line permanently and completely demolished in January of 2013. At the evaporation ponds, waste water is converted into vapor via solar and mechanical wind-effect evaporation. There are a total of four evaporators located at the ponds. Two 80 GPM, electrically driven water evaporators are located between evaporation ponds 4 and 5 and two additional 66 GPM sprayers were installed between ponds 3 and 4 in October 2014. No waste water is discharged from the refinery to surface waters of the U.S. All treated waste water is routed into several evaporation ponds which have large surface areas that are designed to efficiently evaporate water by sunlight and exposure to the changing ambient temperatures.

The stormwater system is a network of valves, gates, berms, embankments, culverts, trenches, ditches, natural arroyos, and retention ponds that collect, convey, control, treat, and release stormwater that falls within or passes through refinery property. Stormwater that falls within the processing areas is conveyed through the same underground piping system that collects waste water effluent from various processing areas with the refinery. The stormwater effluent from within the process areas follows the same flow pattern and treatment as described in the process waste water flow system (T-27 → T-28 → T-35 → NAPIS → WWTP → STP-1 → EP-2 → Evaporation Ponds).

Stormwater discharge from the refinery is infrequent due to the arid desert-like nature of the surrounding geographical area. Gallup Refinery maintains a Storm Water Pollution Prevention Plan (SWPPP) that includes Best Management Practices (BMPs) for effective storm water pollution prevention and control. The refinery has constructed several berms in various areas and improved outfalls (installed barrier dams

equipped with gate valves) to minimize the possibility of potentially impacted runoff leaving the refinery property.

1.3 SITE CHARACTERISTICS

Built in the 1950's, the refinery is located within a rural and sparsely populated section of McKinley County, Jamestown, New Mexico, and located 17 miles east of Gallup, New Mexico. The setting is a high desert plain on the western slope of the Continental Divide. The surrounding land is comprised primarily of public lands and is used for cattle and sheep grazing at a density of less than six cattle or 30 sheep per section. The nearest population centers are the Flying J Travel Center (formerly Pilot) refueling plaza, the Interstate 40 highway corridor, and a small cluster of residential homes located on the south side of Interstate 40, approximately 2 miles southwest of the refinery (Jamestown). Surface vegetation consists of native xerophytic vegetation including grasses, shrubs, small junipers and some prickly pear cacti. Average rainfall is less than ten inches per year with the maximum average precipitation occurring during the month of August.

Local topography consists of an incline down-slope from high ground in the southeast to a lowland fluvial plain in the northwest. The highest point on refinery property is located at the southeast corner boundary (elevation approximately 7,040 feet) and the lowest point is located at the northwest corner boundary (elevation approximately 6,860 feet). The refinery processing facility is located on a flat man-made terrace at an elevation of approximately 6,950 feet.

Surface water in this region consists of man-made evaporation ponds and aeration basins located within the refinery, a livestock watering pond (Jon Myer's Pond) located one mile east of the refinery, two small unnamed spring fed ponds located south of the refinery, and the South Fork of the Puerco River and its tributary arroyos. The various ponds and basins typically contain water consistently throughout the year. The South Fork of the Puerco River and its tributaries are intermittent and generally only contain water during, and immediately after, the occurrence of precipitation.

The 810 acre refinery property site is located on a layered geologic formation. Surface soils generally consist of fluvial and alluvial deposits; primarily clay and silt with minor inter-bedded sand layers. Below the surface layer is the Chinle Formation, which consists of very low permeability clay stones and siltstones that comprise the shale of this formation. As such, the Chinle Formation effectively serves as an aquitard. Inter-

bedded within the Chinle Formation is the Sonsela Sandstone bed, which represents the uppermost potential aquifer in the region. The Sonsela Sandstone bed lies within and parallels the dip of the Chinle Formation. As such, its high point is located southeast of the refinery and it slopes downward to the northwest as it passes under the refinery. Due to the confinement of the Chinle Formation aquitard, the Sonsela Sandstone bed acts as a water-bearing reservoir and is artesian at its lower extremis. Artesian conditions exist through much of the central and western portions of the refinery property.

Groundwater flow within the Chinle Formation is extremely slow and typically averages less than 10^{-10} centimeters per second (less than 0.01 feet per year). Groundwater flow within the surface soil layer, above the Chinle Formation, is highly variable due to the presence of complex and irregular stratigraphy; including sand stringers, cobble beds, and dense clay layers. As such, hydraulic conductivity may range from 10^{-8} centimeters per second in the clay soil layers located near the surface and up to 10^{-2} centimeters per second in the gravelly sands immediately overlying the Chinle Formation. Figure 4 depicts the regional surface water flows are in a westerly direction and Figure 5 depicts surface water bodies and flow lines.

Shallow groundwater located under refinery property generally flows along the upper contact of the Chinle Formation. Although the prevailing flow direction is from the southeast and toward the northwest; a subsurface ridge has been identified and is thought to deflect some flow in a northeasterly direction in the vicinity of the refinery tank farm.

SECTION 2

SCOPE OF ACTIVITIES 2016

The 2016 quarterly and annual groundwater sampling, and semi-annual evaporation pond sampling was conducted by DiSorbo Consulting Services and Western. The third quarter groundwater sampling was combined with the annual sampling event per approval from NMED and OCD and conducted in August and September 2016. The following is a list of monitoring and inspections completed for 2016:

- Separate Phase Hydrocarbon Recovery Logs – Appendix A
- Field Inspection Logs–Appendix B
- Applicable Standards – Appendix C
- Summary of EPA/NMED/RCRA Activity – Appendix D
- Summary of all leaks, spills and releases – Appendix E
- Temporary Land Farm Semi-Annual Sampling – Appendix F
- Hall Laboratory Analytical Data – Appendix G
- Data Tables – Section 8
- Well Data DTW/DTB Measurements (Elevations) – Section 9
- Quarterly, Semiannual, Annual Inspections Summary – Section 10

2.1 MONITORING AND SAMPLING PROGRAM

The primary objective of groundwater monitoring program is to analyze groundwater samples collected and use data to assess groundwater quality at and near the refinery. Groundwater elevation data was collected to evaluate groundwater flow conditions. The groundwater monitoring program for the refinery consists of sample collection and analysis from a series of monitoring, recovery, boundary, process, and shallow monitoring wells. In addition, surface water samples are collected at the evaporation pond locations.

The groundwater monitoring network is separated into five investigation areas (Group A, Group B, Group C, Group D, and Group E) plus the evaporation ponds and effluent from STP-1 to Pond 2. The sampling frequency, analyses and target analytes vary for each investigation areas. The combined data from these investigation area were used to assess groundwater quality beneath and immediately down-gradient of the refinery, and to evaluate local groundwater flow conditions. Samples were collected annually from all monitoring wells with the exception of recovery and/or monitoring wells that had a measurable separate-phase hydrocarbon (SPH) level. At wells that were purged dry, samples were collected if recharge volume was sufficient for sample collection within a 24-hour period. Wells not sampled due to insufficient recharge were documented in the field logs.

Daily field activities, including observations and field procedures, were recorded for each activity and are maintained at the refinery. Field logs include the following information:

- Sample Location Identification
- Date
- Start and finish sampling time
- Field team members, including visitors
- Weather conditions
- Daily activities and times conducted
- Observations
- Record of samples collected with sample designations
- Photo log (if needed)
- Field monitoring data, including health and safety monitoring (if needed)
- Equipment used and calibration records, if appropriate
- List of additional data sheets and maps completed
- An inventory of the waste generated and the method of storage or disposal
- Signature of personnel completing the field record

All samples collected for analysis are recorded in the field report or data sheets. Chain-of-Custody (COC) forms are completed at the end of each sampling day, prior to the transfer of samples off-site. The signed copy of the COC is placed inside sample containers with the samples and shipped to the laboratory. A custody seal is affixed to the lid of the shipping container. Copies of all COC forms generated are kept at the refinery.

2.2 2 SAMPLING METHODS AND PROCEDURES

Each monitoring well was gauged for depth to water (DTW), total depth, and depth to product (DTP), if applicable, to determine the amount of water to purge. A minimum of two well volumes is purged from each well prior to sampling. If water level is at a minimum or the well has a low recharge rate, the well is allowed to recharge within 24 hours before a sample is collected. For wells that are not supplied with dedicated pumps, a portable pump is lowered slowly into the well to minimize disturbance to a depth of the midpoint of the screened interval of the well. The pump controller is started at a slow rate and gradually increased until water is discharged. Field water quality measurements must stabilize for a minimum of three consecutive readings taken at 2 to 5-minute intervals, within the following limits before purging will be discontinued and sampling may begin: dissolved oxygen (DO) (10%), specific conductance (10%), temperature (10%), pH (10%).

Groundwater samples were obtained from each well within 24 hours of the completion of well purging. The samples were transferred to an appropriate, clean, laboratory-prepared containers provided by the analytical laboratory. Sample collection methods have been documented in the field monitoring reports. Weather conditions, the volume of groundwater purged, description of water, the instruments used, and the water quality readings obtained at each interval were recorded on the field-monitoring log.

Well purging and sampling were performed using disposable polyethylene bailers and/or appropriate portable sampling pumps where applicable. Some of the wells have dedicated pumps installed where a controller is used to power the submersible pump to purge water. In shallow wells, new disposable bailers were used for each well to hand bail purge water and retrieve water samples. All purged groundwater was collected in 55 gallon drum(s) and/or 5 gallon bucket(s) and drained into the refinery waste water treatment system upstream of the NAPIS. Groundwater samples intended for metals analysis were submitted to the laboratory as total and dissolved metals samples.

At a minimum, the following procedure was followed when collecting/shipping samples:

- Protective eye wear (safety glasses, goggles and or face shield)
- Neoprene, nitrile, or other protective gloves are worn when collecting samples. New disposable gloves are used to collect samples at each sample point.

- All samples collected for chemical analysis are transferred into clean sample containers supplied by the analytical laboratory. Sample containers are clearly marked and labeled.

- Groundwater samples obtained for dissolved metals analysis are filtered through a 0.45 µm (micrometer) mesh size disposable filter on site.

- Samples are labeled, sealed, placed in cooler with ice until they are shipped via United Parcel Service (UPS) Red, Federal Express Overnight or personally delivered to the analytical laboratory.

- Standard COC procedures are followed for all samples collected. The COC form and sample request form are shipped inside the sealed storage container to be delivered to the laboratory, signed and dated.

- Field duplicates and trip blanks are obtained for quality assurance during sampling activities. Trip blanks accompany laboratory sample bottles and shipping and storage containers intended for volatile organic compound (VOC) analyses. Trip blanks consist of a sample of analyte free de-ionized water placed in an appropriate sample container. Trip blanks are analyzed at a frequency of one for each shipping event involving twenty or more samples.

In order to prevent cross-contamination, field equipment that came into contact with water or soil was decontaminated before each sampling event. The decontamination procedure for the portable pump consists of rinsing/washing the equipment with a detergent water mixture followed by two rinses before use in another well. Any equipment that came in contact with each well, such as data loggers or tape measure, was decontaminated with a detergent water mixture and rinsed with distilled water before each use. Decontamination of equipment when feasible is done at the bundle pad where decontamination water is drained into the sewer system.

Decontamination water from field work was caught in an appropriate container and drained into the sewer system upstream of the NAPIS.

2.2.1 EQUIPMENT

- A submersible bladder pump 2 inch, 115 volt AC to DC converter, Grundfos Redi-flo2 constructed of stainless steel with check valve and 1/2 in. Teflon tubing, adjustable rate controller powered by a gas generator is used to purge groundwater from monitoring wells. Equipment is located downwind and at least 20 feet from the well so that exhaust fumes do not cross-contaminate the samples.

- Water level instrument used is a WaterMark Oil Water Interface Meter 100 feet, Model 101L/SMOIL. This instrument measures water and hydrocarbon level; indication is a steady audible tone for water and hydrocarbon indication is an erratic audible tone.

- Parameter Instrument – YSI Model 556 MPS Multi Probe System which simultaneously measures DO, conductivity, temperature, and optional pH and ORP (Oxidation Reduction Potential). As a backup, we also have an IQ Scientific Instrument, Model IQ180GLP which measures pH, DO, TDS (Total Dissolved Solids), conductivity, salinity, ISE (Ion Selective Electrode), mV (Millivolts) and temperature.

- Disposable Bailers – Polyethylene bailer 1.5 inches X 36 inches overall length (OAL) with a capacity of approximately 1 liter and 3 inches X 36 inches OAL. Individually sealed packaging, single check valve bailer with slide in angle cut nozzle for sample removal. A new bailer is used for each well that requires hand bailing for purging and sample retrieval.

- Field equipment parameter instruments were calibrated to known standards in accordance with the manufacturers' recommended schedules and procedures. Calibration checks are conducted before a sampling event and the instruments recalibrated as deemed necessary. Calibration of equipment was noted in the daily field logs.

- If field equipment becomes inoperable, a properly calibrated replacement instrument is used in the interim. Type of instrumentation used during a sampling event is recorded in the daily field logs.

2.3 COLLECTION AND MANAGEMENT OF INVESTIGATION DERIVED WASTE

Investigation derived waste (IDW) generated during each groundwater sampling event includes purged water, decontamination water, excess sample material, and disposable sampling equipment. All water purged from monitoring wells generated during sampling and decontamination activities was temporarily stored in a labeled 55-gallon drum(s) and/or 5 gallon bucket(s) and then drained into the refinery sewer system upstream of the NAPIS.

2.4 COLLECTION OF SURFACE WATER SAMPLES

At the evaporation ponds, grab samples were collected near the inlets (pond edge). This location was noted in the field notebooks. For outfalls, a grab sample was collected at the pipe end, and recorded in the field log.

2.5 ANALYTICAL METHODS

Groundwater and surface water samples collected during the monitoring events were analyzed for the constituents listed in Table 1, Section 10.0. In addition, the WQCC standard was used for total and dissolved metals analysis.

2.6 PERIMETER INSPECTION

Perimeter inspections are part of the daily routine for refinery personnel to report any hydrocarbon staining, spills or any release that could result in material leaving the property boundary

2.7 REMEDIATION ACTIVITIES

A site investigation of the refinery tank farm network conducted in 1987 indicated high concentrations of BTEX constituents in the groundwater as well as hydrocarbons. As a result of the findings from additional site investigations conducted from 1987 through 1990, four recovery wells (RW-1, RW-2, RW-5, and RW-6) were installed to recover the SPH. SPH has been recovered from RW-1 using a submersible bladder pump and from RW-5 and RW-6 by hand-bailing using a disposable polyethylene bailer. Tables in Appendix A summarizes measurements, volume of product and water purged and also provides year to date (YTD) product purged from each well. RW-2 is listed as a recovery well but to date no visible hydrocarbon layer or odor has been observed in this well during quarterly inspections.

In RW-1 a bladder pump was used to pump out SPH on a quarterly basis into a labeled 55-gallon drum. The visible layer of floating product in the drum was measured with a tape measure and calculated as best as possible for the volume of product recovered. In RW-5 and RW-6, a 3 foot disposable hand bailer was used to extract product and water from the wells. Bailed water was collected in a 5-gallon bucket and the visible layer of floating product was then measured with a tape measure to estimate volume of SPH recovered. The purged water was drained into the refinery waste water treatment system upstream of the NAPIS.

Although the SPH thickness level in RW-1 has generally increased since the first quarter of 2013, hydrocarbon recovery from RW-1 has shown a general decrease from 2005 through 2016. In 2016, total hydrocarbon recovery is estimated at 8.5 gallons in 53 gallons of water purged compared to the 2005 estimate of 431 gallons of hydrocarbons in 1,210 gallons of water. No measureable hydrocarbons have been detected in RW-2 since the well was installed. RW-5 and RW-6 have shown a steady decrease in hydrocarbons since 2005 and no SPH has not been detected since February 2009 and November 2011, respectively. Hydrocarbon recovery logs are included in Appendix A.

On June 26, 2013, notification of the discovery of a hydrocarbon seep to the land surface was made to NMED and OCD. Shortly after the seep was initially discovered, fourteen soil excavations were completed in the area of the seep to help identify the presence of hydrocarbons in the shallow subsurface. The

excavations confirmed the presence of hydrocarbons throughout the immediate area of the seep and to the east and south of the seep. Six of the excavations were found to have sufficient hydrocarbons to warrant completion as temporary recovery sumps. A six-inch PVC well screen was placed into each of these six excavations and backfilled with coarse gravel to create temporary sumps to allow for safe, continued recovery of liquids. The sumps range in depth from approximately 8 to 10 feet and are estimated to be 4 feet wide by 6 feet long. The area has been identified as the “Hydrocarbon Seep”, located directly west of crude Tanks 101 and 102. Response actions have included installation of six temporary sumps (S1 – S6), and to date a total of 44 permanent monitoring wells (MKTF-1 through MKTF-44) have been installed to monitor ground water impacts. From June 2013 through December 2016 total hydrocarbon recovery is estimated to be 14,552 gallons and 899,480 gallons of water from the sumps. As noted in Appendix A, SPH recovery increased in July 2016 at the sumps. There were no changes to the recovery methods to explain the increase in recovery volumes.

Of the 44 permanent monitoring wells installed, eleven (MKTF 3, 5, 6, 7, 8, 12, 13, 14, 15, 36, 37) wells had measureable layers of product in 2016. Initial hydrocarbon recovery from these wells conducted in February and June 2015 is estimated at 11.2 gallons. No hydrocarbon recovery was done in 2016. The wells identified to have a product layer will be pumped on a more frequent basis to determine recharge rate and recovery of hydrocarbons.

SECTION 3

GROUNDWATER DTW/ DTP ELEVATION

Groundwater elevation data were collected from the wells listed in Tables 9.1 and 9.2, Section 9.0. A summary of field measurements (DTW, DTP) taken during the quarterly, semi-annual and annual inspections is included in Section 9. Groundwater levels and SPH column thickness measurements (from the RW series of wells as well as the MKTF wells) were collected quarterly to monitor groundwater elevation and product column thickness fluctuations over time. Maps were generated using elevation data collected from surveys conducted by DePauli Engineering and from Hammon Enterprises Inc., professional surveyor and data from the 2016 field inspection logs.

Field notes and measurement data were recorded in field logs for each well for 2016 and are located in Appendix B. The DTW and DTP levels were measured to the nearest 0.01-ft. The depth to groundwater and SPH column thickness are recorded relative to the surveyed well casing rim or other surveyed datum. A corrected water table elevation is provided in wells containing SPH by adding 0.8 times the measured SPH column thickness to the measured water table elevation (Section 9).

All water/product levels are measured to an accuracy of the nearest 0.01-ft using a WaterMark Oil Water Interface Meter, Model 101L/SMOIL (100 ft.). After the water level is determined, the well volume is calculated using the height of the liquid column and the internal cross sectional area of the well. The purge volume is a minimum of two times the well volume.

Groundwater and SPH levels were measured in all wells within 48 hours of the start of groundwater sampling activities. All manual extraction of SPH and water from recovery wells, observation wells, and collection wells is discontinued for 48 hours prior to the measurement of water and SPH levels. Figure 6 (Section 11) shows the locations of all active wells.

SECTION 4

REGULATORY CRITERIA

Laboratory analytical data is compared to the most current regulatory standards (Appendix C) at time of submission of report.

- New Mexico 20NMAC 20.6.2.3103 (WQCC). Standards for Groundwater of 10,000 mg/L TDS Concentration or Less
- EPA 40 CFR 141.62. National Primary Drinking Water Regulations (Updated MAY 2016) (EPA MCL)
- NMED Tap Water Screening Levels (JULY 2015)
- EPA Regional Screening Levels set for Residential Risk-Based Screening Levels (EPA RSL) for Tap Water (Ross) (MAY 2016)

SECTION 5

GROUNDWATER ELEVATIONS

Groundwater elevations are depicted in the following maps using data from the 2016 quarterly and annual sampling events. In addition, graphs of the water levels are included in Figures 11 – 11.4, 11-A and 11-B

- Figure 7 (Section 11) presents a south-north geologic profile (east side of the refinery) showing contours of monitoring wells with reference to stratigraphic locations in which the water bearing zones are located.

- Figure 8 (Section 11) presents a south-north section on the west side of the refinery showing contours of monitoring wells with reference to stratigraphic locations in which the water bearing zones are located.

- Figure 14 (Section 11) represents a geologic profile for the west-east well locations.

SECTION 6

GROUNDWATER MONITORING RESULTS

All analytical data tables referenced in the following subsections are included in Section 8 of this report. Bold and highlighted values indicate a constituent exceeds a listed standard(s). Due to requirements for field preservation of samples, some samples have the results for nitrite and nitrate reported as a single value of nitrogen. In these instances, the value is conservatively listed for both nitrite and nitrate and a comparison is made between the reported concentration and the regulatory standards for both nitrite and nitrate. This may result in false indication of nitrite exceeding the regulatory standard. Plots of the reported concentrations are provided in a series of Figures numbered 15 through 17. Appendix G - Laboratory data for 2016 sampling events is provided on attached CD.

6.1 CONSTITUENT LEVELS IN GROUP A MONITORING WELLS

Group A wells are located within the northwest corner of the refinery property. Nine monitoring wells are situated along the refinery boundary and six monitoring wells are within the RCRA LTU area.

6.1.1 BOUNDARY WELLS (BW -1A/1B/1C, BW-2A/2B/2C, BW-3A/3B/3C)

The nine boundary wells (BW), downgradient of the refinery property, are screened within three different stratigraphic units. BW-1A, BW-2A, and BW-3A are screened within the Upper Sand stratigraphic unit (Figure 12); BW-1B, BW-2B, and BW-3B are screened in the Chinle/Alluvium Interface stratigraphic unit (Figure 10); and BW-1C, BW-2C and BW-3C are screened within the Sonsela stratigraphic unit (Figure 9).

The BW-1A, BW-1B, and BW-1C wells are located on the elevated dike separating evaporation pond 7 (EP-7) and evaporation pond 8 (EP-8). BW-2A, 2B, and 2C are located on the northwest edge of evaporation pond 11 (EP-11) and BW-3A, 3B, and 3C are located in the field north of evaporation ponds 12A and 12B (EP-12A and EP-12B). The boundary wells are sampled on an annual basis and evaluated for the following analytes: 8260B plus MTBE, gasoline range organics, (GRO), diesel range organics (DRO) and motor oil range organics (MRO), major cations/anions, and WQCC metal (total and dissolved). No water level was

detected in wells BW-1A, BW-3A, and BW-1B. The boundary wells were sampled and/or inspected on the following dates:

WELL ID	DATE	WELL ID	DATE	WELL ID	DATE
BW-1A	9/8/16	**BW-2A**	9/8/16	**BW-3A**	9/8/16
BW-1B	9/8/16	**BW-2B**	9/8/16	**BW-3B**	9/8/16
BW-1C	9/8/16	**BW-3C**	9/8/16	**BW-3C**	9/8/16

- No BTEX or MTBE constituents were detected in BW-1C, 2A, 2B, 2C, 3B or 3C in 2016. (Table 8.1).
- Fluoride was detected above the WQCC standard of 1.6 mg/L in BW-1C (2.4 mg/L), and BW-2C (1.9 mg/L). Low concentrations of chloride, sulfate and bromide were detected in each of the BW wells sampled in 2016. Phosphorus exceeded applicable standards in BW-1C, BW-2A and BW-3B (Table 8.1.1).
- Low concentrations of total and dissolved metals were detected in each of the BW wells in 2016 at concentration levels below the applicable standards. (Tables 8.1.2 and 8.1.3)
- Bis(2-ethylhexyl)phthalate was detected in BW-1C in 2013, in BW-3B in 2009, and BW-3C in 2011 and may possibly be a lab contaminant or from the PVCC pipe materials used as casing in these wells. The constituent was not detected in any of the BW wells sampled in 2016. As of 2016, SVOCs were removed from analytical requirement (Table 8.1.4).

6.1.2 LAND TREATMENT UNIT (MW-1, MW-2, MW-4, MW-5, SMW-2, and SMW-4)

The LTU groundwater monitoring wells include MW-1, MW-2, MW-4, MW-5, SMW-2, and SMW-4. MW-1, SMW-4, and MW-2 are located downgradient along the north edge of the closed RCRA LTU. MW-5 and SMW-2 are located on the eastern perimeter of the LTU and MW-4 is located upgradient (south) of the LTU. MW-1, MW-2, MW-4, MW-5 are screened within the Sonsela stratigraphic unit. SMW-4 is screened within the Chinle/Alluvium Interface and SMW-2 is screened in both the Chinle/Alluvium Interface and Upper Sand stratigraphic units.

The LTU monitoring wells are sampled on an annual basis. In addition, MW-1, MW-2, MW-4, and MW-5, SMW-2 and SMW-4 are sampled every 10 years to comply with the RCRA Post Closure Permit. Annual samples were analyzed for the following analytes: 8260B plus MTBE, DRO, GRO, MRO, major cations/anions, WQCC metals (total and dissolved), cyanide, VOCs and SVOCs.

Annual sampling and inspections for 2016 on the LTU monitoring wells were completed on the following dates:

WELL ID	DATE	WELL ID	DATE
MW-1	9/7/16	**SMW-2**	9/9/16
MW-2	9/7/16	**SMW-4**	9/9/16
MW-4	9/7/16		
MW-5	9/7/16		

The next 10 year RCRA Post Closure Permit sampling event for MW-1, MW-2, MW-4, MW-5, SMW-2 and SMW-4 is scheduled to occur in 2019. The following analytes are evaluated during the RCRA Post Closure Permit sample event: modified Skinner List for VOCs, SVOCs, total petroleum hydrocarbons (TPH), DRO, GRO, MRO, metals to include mercury and cyanide, and major cations/anions with pH and conductance.

- No BTEX or MTBE have been detected in any of the MW wells. (Table 8.2)
- Low concentrations of fluoride, chloride and sulfate were detected in the MW wells in 2016 at concentration levels below the applicable standards.
- Metals (total and dissolved) was also detected in concentrations below the applicable standards in all of the MW wells in 2016.
- Several organic compounds were detected at low concentrations in 2016 in all of the MW wells (bis (2-ethylhexyl)phthalate, benzoic acid, d-n-octylphthalate, dimethylphthalate, and pyrene),
- No concentrations of BTEX or MTBE was detected in any of the SMW wells, with the exception of SMW-2 which has had low concentrations of MTBE below the applicable standard of (0.143 mg/L). (Table 8.3).
- In SMW-2, chloride and sulfate were detected above the WQCC standards since 2011. Low concentrations of fluoride, chloride and sulfate have been detected in SMW-4. GRO was also detected in both SMW wells. (Table 8.3.1)
- Low concentrations of metals (total and dissolved) have been detected in both wells, with manganese exceeding the WQCC standard of 0.2 mg/L in 2016. (Table 8.3.2 – 8.3.3)
- In 2016, five organic constituents were detected at concentration levels below the applicable standard (benzoic acid, bis(2-ethylhexyl) phthalate, di-n-octylphthalate, dimethylphthalate, and pyrene). (Tables 8.3.4).

6.2 CONSTITUENT LEVELS IN GROUP B MONITORING WELLS

There are ten monitoring wells in Group B, not including the three leak detection units. These wells are located within the aeration basin west of the refinery tank farm. Group B includes three groundwater monitoring wells (GWM), four monitoring wells for the New American Petroleum Institute Separator (NAPIS), three leak detection units (LDU), OAPIS-1 installed in 2012 as a result of the Solid Waste Management Units (SMWU) No. 1, Aeration Basin and SMWU No. 14, Old API Separator site investigation. Two new monitoring wells (STP1-NW and STP1-SW) installed on the west end of the sanitary treatment pond (STP-1) in May 2014.

6.2.1 GROUNDWATER MONITORING WELLS (GWM-1, GWM-2, GWM-3)

The GWM series of wells are all screened in the Chinle/Alluvium Interface stratigraphic unit. GWM-1 and GWM-2 are located on the west side of the aeration basin straddling the dike that separates AL-2 and EP-1. Downgradient from GWM-1 and GWM-2 is GWM-3 located on the northwest corner of EP-1. These wells are inspected and sampled on a quarterly basis. No groundwater has been detected in GWM-2 and GWM-3 in 2014, 2015 and 2016. In fourth quarter 2015, an SPH level was detected in GWM-1 and in all of 2016 and no ground water samples were collected.

Groundwater samples from GMW-1 were analyzed for the following constituents: BTEX, MTBE, DRO, GRO, MRO, major cations/anions, WQCC total and dissolved metals, and VOCs and SVOCs.

Quarterly inspections and sampling of the GMW wells were completed on the following dates:

WELL ID	QTR 1	QTR 2	QTR 3	QTR 4
GWM-1	3/1/16	6/7/16	9/13/16	11/14/16
GWM-2	3/1/16	6/7/16	9/13/16	11/14/16
GWM-3	3/1/16	6/7/16	9/13/16	11/14/16

- No groundwater sample was collected from GWM-1 in all of 2016 due to the detection of SPH.
- No ground water samples were collected from GWM-2 and GWM-3 in all of 2016, wells are dry.
- Elevated concentration levels of benzene above the EPA MCL standard of 0.005 mg/L have been detected in GWM-1 since 2010 thru third quarter 2015, with the highest concentration recorded in the fourth quarter 2014 at 0.012 mg/L. Concentrations of ethylbenzene, toluene, xylenes, and MTBE remain within the applicable standards for GWM-1 (Table 8.7).

- DRO and GRO were detected in GWM-1 from 2010 through 2015 and in the fourth quarter 2015, MRO was detected in GWM-1 at 18 mg/L

- Fluoride and chloride have been detected in GWM-1 exceeding the WQCC standard (1.6 mg/L) since 2006 in GWM-1 with the exception of quarter four in 2011.

- Fluoride and chloride have also been detected in GWM-2 and GWM-3 at levels above the WQCC standards from 2010 thru 2013.

- Concentrations of total and dissolved arsenic, iron, and manganese in GWM-1 have exceeded applicable standards since 2008. Low concentrations of barium, chromium, lead, selenium and zinc have been detected in prior years. Total and dissolved barium and total lead concentrations, were detected within the applicable standards for all of 2015. Concentrations of the remaining total and dissolved metals did not exceed the applicable standards during 2015 (Tables 8.7.2 and 8.7.3).

- Concentrations of VOCs and SVOCs detected above the applicable standards in third quarter 2015 in GWM-1 include; naphthalene, 1-methylnaphthalene, 2-methylnaphthalene, benz(a)anthracene, benzo(a)pyrene, chrysene, fluorene, phenanthrene, and pyrene. (Table 8.7.4) No organic constituents have been detected in GWM-2 and GWM-3.

GWM-2 and GWM-3 were installed and developed in 2005. The wells are checked quarterly for the presence of water. If water is detected, NMED and OCD are notified within 24 hours of discovery. The water is purged from the well and re-measured to calculate the potential recharge rate. Groundwater samples are collected when water level is sufficient.

Groundwater was first observed in GWM-2 during the first quarter of 2008. The depth to water was 18.45 feet with an estimated water column height of 0.36 feet. Samples were collected and the well was bailed dry. GWM-2 did not recharge and remained dry until the third quarter of 2010. GWM-2 continued to recharge as samples were collected throughout 2011, 2012, and most of 2013. GWM-2 has had an insufficient volume for sampling since the fourth quarter of 2013 and remained dry throughout 2016. GWM-3 has remained dry since 2013. In late 2012 through early 2013, rerouting of the flow to the WWTP caused a reduction in the levels in the aeration lagoons and gravitational flow between the lagoons to pond 1 ceased.

6.2.2 GROUNDWATER MONITORING WELLS: NAPIS-1, NAPIS-2, NAPIS-3, AND KA-3

The NAPIS groundwater monitoring wells are located east of the aeration lagoons. NAPIS-1 is an upgradient well located on the southeast side of the separator. The NAPIS-2 monitoring well is located in the southwest corner of the bay to the separator, and NAPIS-3 is located in the northwest corner. KA-3 is located between NAPIS-2 and NAPIS-3 on the west side of the bay to the separator unit. These wells are

screened in the Chinle/Alluvium stratigraphic unit with three of the wells (NAPIS-2, NAPIS-3, and KA-3) installed subsurface.

The NAPIS and KA wells are sampled on a quarterly basis. In agreement with OCD and approved by NMED, the third quarter sampling is combined with the annual sampling event. Groundwater samples were analyzed for the following parameters: BTEX, MTBE, major cations/anions, WQCC total and dissolved metals, and VOCs and SVOCs.

WELL ID	QTR 1	QTR 2	QTR 3	QTR 4
NAPIS-1	3/1/16	6/7/16	9/1/16	11/14/16
NAPIS-2	3/1/16	6/7/16	9/1/16	11/14/16
NAPIS-3	3/1/16	6/7/16	9/1/16	11/14/16
KA-3	3/3/16	6/6/16	9/1/16	11/14/16

- BTEX and MTBE have remained below the applicable standards since 2008 for NAPIS-1. Benzene and MTBE concentrations in NAPIS-2 have exceeded the applicable standards since 2008 and remained in exceedance for 2016. BTEX constituents were detected in NAPIS-3 along with MTBE being detected at 0.16 mg/L in the first quarter. Benzene was detected in NAPIS-3 at a concentration of 0.013 mg/L in the first quarter, which exceeds the cleanup standard of 0.005 mg/L. The benzene concentrations for the remainder of the year were <0.001 mg/L at NAPIS-3 for the remainder of the year.

- In KA-3, benzene was detected above the cleanup standard of 0.005 mg/L in the first, second and third quarter of 2016 and low concentrations (below the cleanup standards) of ethyl benzene and MTBE have been detected in all of 2016 below applicable standards. (Table 8.8).

- DRO has been detected in the third and fourth quarter in NAPIS-2 and in the fourth quarter in NAPIS-3. Detections of GRO in NAPIS-2 and KA-3 continues and in all of 2016. No MRO has been detected in any of the NAPIS or KA wells. (Table 8.8.1).

- Low concentrations of fluoride, chloride, nitrites, nitrates and sulfate have been detected in NAPIS-1 in 2016 (Table 8.8.1).

- Fluoride and chloride concentrations in NAPIS-2 have exceeded the WQCC standards of 1.6 mg/L and 250 mg/L, respectively, for Q2, Q3, and Q4 2016. Fluoride concentrations were at acceptable levels in the first quarter while chloride levels were at 330 mg/L in the first quarter (Table 8.8.1).

- Fluoride, chloride, nitrate and nitrite concentrations in NAPIS-3 also exceeded applicable standards in various quarters of 2016. (Table 8.8.1). The fluoride cleanup goal of 1.6 mg/L was exceeded in the third and fourth quarters. Chlorides exceeded the cleanup goal of 250 mg/L in all four quarters. The cleanup goals for nitrites (10 mg/L) and nitrates (10 mg/L) were exceeded in the first and second quarters. Phosphate was also detected in the third and fourth

quarters, but not at levels that exceeded any regulatory limits. The probable source of the phosphates is uncertain. The only other well in the vicinity of NAPIS-3 that had a detection of phosphate was OW-12, in September 2016. Since OW-12 is up gradient of NAPIS-3, it is possible that the source of the phosphate is in an up gradient direction.

- Fluoride and sulfate concentrations in KA-3 have remained below the WQCC standard since June of 2013. Chlorides concentrations had only one exceedance during that same time in September 2014 of 790 ppm. (Table 8.8.1).

- Detection of total metals include manganese in NAPIS-1 for all metals analyses of 2016 (i.e., second, third and fourth quarters) at concentration levels above the WQCC standard of 0.2 mg/L and trace amounts of arsenic, barium, iron, lead, selenium, mercury and zinc were detected in 2016 in NAPIS-1. In NAPIS-2, barium, iron and manganese also had high concentrations detected in all of 2016. Low concentrations of arsenic, chromium, copper, lead, selenium, mercury and zinc were detected, all at levels below the applicable standards. Total lead concentrations were below the cleanup standard in the second quarter, but were slightly above the cleanup standard in the third and fourth quarters in samples collected at NAPIS-3 (Table 8.8.2). In addition to lead, in NAPIS-3, arsenic, barium, chromium, iron, and manganese were detected in the fourth quarter of 2016 at concentration levels above the applicable standards. Copper, lead, selenium, mercury and zinc were also detected at levels below the applicable standards in 2016. (Tables 8.8.2).

- In the dissolved metals analyses, uranium exceeded the standard at NAPIS-1 in the fourth quarter and in the second and fourth quarters at NAPIS-3. At NAPIS-2, dissolved barium, iron, and manganese exceeded in the second, third, and fourth quarters with the single exception of barium in the second quarter of 2016, which was below the standard. Dissolved iron, manganese, and uranium exceeded in the fourth quarter sample collected at NAPIS-3. Dissolved uranium also exceeded the standard in the second quarter at NAPIS-3.

- In KA-3, barium (total and dissolved) and iron (total) were detected at high concentrations in the fourth quarter 2016. Manganese (total and dissolved) was detected at levels exceeding applicable standards in all samples collected in 2016. Arsenic, copper, lead, selenium, mercury, uranium, and zinc were also detected at levels below the applicable standards in 2016. (Tables 8.8.2 and 8.8.3).

- No VOCs have been detected in NAPIS-1 and NAPIS-3 with the exception of low concentrations of 1,2,4-trimethylbenzene, 1,2-dichloroethane (EDC) and 1-methylnaphthalene detected in the fourth quarter. In NAPIS-2, 12 organic compounds were detected in 2016 all at concentrations below the applicable standards and 1-methylnaphthalene and naphthalene were detected at levels exceeding applicable standards in 2016. In the first quarter well NAPIS-3 had detections below the applicable groundwater protection standards of naphthalene, 1,1-dicloroethane, 1,1-dichloroethene, isopropyl benzene, n-butyl benzene, sec-butyl benzene, and cis-1,2-dichloroethylene.

- In KA-3, trace amounts of ten VOCs were detected, most at concentrations below the applicable standards. It is noted that the 1- methylnaphthalene concentration in the groundwater sample collected from well KA-3 exceeded the standard during the third quarter of 2016. See Table 8.8.4 for the complete list.

6.2.3 LEAK DETECTION UNITS (LDU): EAST LDU, OIL SUMP LDU, WEST LDU

The NAPIS secondary containment units otherwise known as leak detection units (LDU) are installed on the east and west bay of the NAPIS unit. The East LDU is located on the southeast corner in the east bay of the NAPIS unit between the unit and NAPIS-1. The Oil Sump LDU is located on the northeast side of the East LDU. The West LDU is located in the southwest corner of the west bay of the NAPIS unit. The LDUs were monitored in 2010 as part of the 2010 Facility Wide Groundwater Monitoring Work Plan (FWGWMP).

The LDU are sampled and inspected on a quarterly basis. In agreement with OCD and approved by NMED,

the third quarter sampling was combined with the annual sample event. The LDUs were sampled for the following analytes in 2016: BTEX, MTBE, DRO, GRO, MRO, WQCC total and dissolved metals, and VOCs. Oil Sump LDU was dry all four quarters 2016 and therefore not sampled. There was not enough water in the East and West LDU for sample collection in the third quarter of 2016. Quarterly inspections and sampling were completed for the LDU wells on the following dates:

SAMPLE ID	QTR 1	QTR 2	QTR 3	QTR 4
EAST LDU	3/1/16	6/7/16	9/6/16	11/17/16
WEST LDU	3/1/16	6/7/16	9/6/16	11/17/16
OIL SUMP LDU	3/1/16	6/7/16	9/6/16	11/17/16

- Benzene was detected in the East LDU at concentration levels above the applicable standard and low concentrations of toluene, ethyl benzene, total xylenes and MTBE were also detected. DRO and GRO was also detected in 2016 in the East LDU (Table 8.10).
- In the West LDU, benzene exceeded applicable standards in all of 2016. Toluene, ethyl benzene, total xylenes, and MTBE were also detected at concentration levels below the applicable standards. DRO and GRO were also detected in 2016. (Table 8.10).
- No samples were collected from the Oil Sump LDU since the second half of 2013; no water level has been observed.
- The following metals (total and dissolved) have been detected at concentration levels above the applicable standard in 2016 in the East LDU: Chromium and manganese (first, second and fourth quarters). Iron was detected above the standard in the first, second and fourth quarters total analyses and fourth quarter dissolved analysis). Chromium and manganese (total and dissolved) and iron (total only) were detected at concentrations above the applicable standards in the West LDU. Low concentrations of arsenic, barium, copper, lead, selenium, mercury and zinc was also detected in the East LDU. (Table 8.10.1 and 8.10.2).
- Concentrations of 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene exceeded the EPA RSL standards in the East LDU in the first and second quarters of 2016. Concentrations of 1,2,4-trimethylbenzene, exceeded EPA RSL standards in the West LDU in the second quarter 2016. (Table 8.10.3).

6.2.4 GROUNDWATER MONITORING WELL: OAPIS-1

The OAPIS-1 groundwater monitoring well was installed in 2012 on the southeast edge of AL-2 as a result of the Investigation Work Plan for SMWU No. 1 (Aeration Basin) and SMWU No. 14 (Old API Separator). The OAPIS–1 well is screened in the Chinle/Alluvium Interface stratigraphic unit. The OAPIS-1 well was added to the quarterly sample schedule in 2013. In agreement with OCD and as approved by NMED, the third quarter sample event was combined with the annual sample event.

In 2016, groundwater samples were collected from OAPIS-1 for the following analytes: BTEX, MTBE, DRO, GRO, MRO, major cations/anions, WQCC total and dissolved metals, cyanide, VOCs and SVOCs.

The OAPIS-1 well was inspected and sampled on the following dates in 2016:

WELL ID	QTR 1	QTR 2	QTR 3	QTR 4
OAPIS-1	3/1/16	6/7/16	9/1/16	11/14/16

- Benzene and MTBE concentrations exceeded the EPA MCL standards (0.005 mg/L and 0.143 mg/L, respectively) for each quarterly sample event in 2016. Concentrations of toluene, ethylbenzene and total xylenes were also present but remained below the applicable standard in 2016 (Table 8.9).

- In 2016, DRO and GRO concentrations were detected in all of 2016. Chloride concentrations exceeded the WQCC standards of 250 mg/L, and fluoride was also above the applicable standard of 1.6 mg/L in the first quarter. (Table 8.9.1).

- The following metals (arsenic, iron, and manganese) exceeded the applicable standards in 2016 and total cyanide was detected at 0.504 mg/L in the fourth quarter 2016. Barium, chromium, copper, lead, selenium, mercury and zinc were also detected at levels below the applicable standards in 2016. (Table 8.9.2).

- In the first quarter of 2016, 1,2-dichloroethane(EDC) was detected 0.0062 mg/L exceeding the EPA MCL standard of 0.005 mg/L. 1-methylnaphthalene was detected above the applicable standards in all of 2016. Bis(2-ethylhexyl) phthalate was reported at 0.019 mg/l, which exceeds the screening level of 0.0056 mg/l, in the sample collected in the second quarter. Low concentrations of 14 organic compounds were detected throughout 2016 all at levels below applicable standards. See Table 8.9.4 for a complete list of VOCs and SVOCs..

6.2.5 STP1-NW and STP1-SW

Monitoring well STP1-NW is located on the west end of the north bay (STP-1) and STP1-SW is located on the southwest corner of the south bay of STP-1. These wells were installed in May of 2013. Ground water samples were analyzed for the following analytes: 8260B plus MTBE, DRO, GRO, MRO, major cations/anions, WQCC total and dissolved metals, cyanide and SVOCs.

The STP1-NW and STP1-SW wells were inspected and sampled on the following dates in 2016:

WELL ID	QTR 1	QTR 2	QTR 3	QTR 4
STP1-NW	3/2/16	6/7/16	9/9/16	11/14/16
STP1-SW	3/2/16	6/7/16	9/9/16	11/14/16

- No samples collected from STP1-SW as this well has remained dry.

- There were no BTEX, DRO, GRO, or MRO constituents detected in 2016 in STP1-NW. Low concentrations of MTBE were detected in all of 2016 below the applicable standard of 0.143 mg/L. (Table 8.14).

- Chloride was detected above the applicable standard of 250 mg/L in the second, third and fourth

quarter of 2016.

- Nitrates were detected at concentration above the appropriate cleanup level in the second, third and fourth quarters of 2016.

- Silver was detected at a concentration below the applicable cleanup standard in November 2016.

- Arsenic, iron, lead and manganese were detected above the applicable standards in the fourth quarter 2016. Barium, chromium, copper, selenium, mercury and zinc were also detected at concentration levels below the applicable standards. (Tables 8.14.1).

No SVOCs were detected Only one VOC (MTBE) was detected in 2016.

6.3 CONSTITUENT LEVELS IN GROUP C MONITORING WELLS

The Group C wells include six observation wells (OW-13, OW-14, OW-29, OW-30, OW-50, and OW-52) located on level terrain northeast of the refinery tank farm, and four recovery wells (RW-1, RW-2, RW-5, and RW-6) located within the refinery tank farm. Observation wells OW-50 and OW-52 were installed in 2009 to monitor potential migration of constituents. The recovery wells were installed between 1987 and 1990 and have been used to recover SPH.

6.3.1 OBSERVATION WELLS: OW-13, OW-14, OW-29, and OW-30

The observation wells OW-14, OW-29, and OW-30 are screened in the Chinle/Alluvium Interface; observation well OW-13 is screened in the Sonsela stratigraphic unit. OW-13 is downgradient (north) of the tank farm and OW-14 is upgradient and adjacent to the LPG tank farm. OW-29 is located directly north of OW-14 and OW-30 is situated northeast of OW-14 along the east side of the railroad spur entering the refinery property from the north. These observation wells are sampled quarterly and in agreement with OCD, approved by NMED, the third quarter sampling event is combined with the annual sampling requirement per the OCD discharge permit.

Groundwater samples were collected from these observation wells and submitted for laboratory analyses of the following analytes: BTEX, MTBE, DRO, GRO, MRO, major cations/anions, WQCC total and dissolved metals, and VOCs.

Observation wells OW-13, OW-14, OW-29, and OW-30 were sampled on the following dates in 2016:

WELL ID	QTR 1	QTR 2	QTR 3	QTR 4
OW-13	3/4/16	6/6/16	8/31/16	11/15/16

OW-14	3/4/16	6/6/16	8/31/16	11/15/16
OW-29	3/4/16	6/6/16	8/31/16	11/15/16
OW-30	3/8/16	6/6/16	8/31/16	11/14/16

- In OW-13, a low concentration of benzene was detected in the third quarter 2016 below the applicable standard (0.005 mg/L) and low concentrations of MTBE continues to be detected at concentrations below the applicable standard of 0.143 mg/L. Toluene, ethylbenzene and xylenes were all non-detected for 2016. (Table 8.13)

- In OW-14, benzene and MTBE were above the applicable standard of 0.005 mg/L and 0.143 mg/L with the highest level of benzene (8.7 mg/L) in the fourth quarter and 0.68 mg/L of MTBE in the first quarter 2016.

- OW-29 sampling results indicate levels above the applicable standard of 0.143 mg/L for MTBE in all of 2016, with the highest reading of 3.4 mg/L occurring in the fourth quarter. Benzene was detected in the fourth quarter only above the applicable standard of 0.005 mg/L and in the fourth quarter, ethylbenzene was recorded at 0.0011 mg/L; below the applicable standard of 0.7 mg/L. Toluene and total xylenes were all non-detect for 2016. (Table 8.13).

- In OW-30, MTBE was detected above the applicable standard of 0.143 mg/L in all of 2016, with the highest reading of 3.5 mg/L in the first and fourth quarter. A low concentration of benzene was detected in the second quarter at 0.0031 mg/L. No detections of toluene, ethylbenzene or xylenes in 2016. (Table 8.13).

- GRO was detected in OW-13, OW-14, OW-29 and OW-30 in all of 2016 and DRO was detected only in OW-14 in 2016. (Table 8.13.1).

- Metals (total and dissolved). No metals were detected in OW-13 that exceeded applicable standards in 2016. (Table 8.13.1).

- Metals (total and dissolved). Arsenic, barium, iron and manganese were detected at concentration levels above applicable standards in 2016 in OW-14.

- Metals (total and dissolved). In OW-29, manganese was detected at levels above the applicable standard of 0.2 mg/L in all of 2016.

- No metals (total and dissolved) were detected exceeding the applicable standards in 2016 in OW-30.

- In OW-13, 1,2-dichloroethane (EDC) was detected in all of 2016 at concentration levels below the applicable standard of 0.005 mg/L. (Table 8.13.4).

- 1-methylnaphthalene and naphthalene was detected in OW-14 in all of 2016 at concentrations above the EPA RSL for tap water standard of 0.0011 mg/L and 0.00165 mg/L (NMED Tap Water) for naphthalene. Methylene chloride was also detected at 0.011 mg/L which exceeds the cleanup standard of 0.005 mg/L Nine other organic compounds were also detected at concentration levels below the applicable standards. See Table 8.13.4 for a complete list.

- No organic compounds detected were exceeding applicable standards in OW-29 and OW-30 in all of 2016. See Table 8.13.4 for a complete list.

6.3.2 OBSERVATION WELLS: OW-50 and OW-52

Observation wells OW-50 and OW-52 were installed upgradient from OW-13 and OW-29 in 2009 to monitor

possible migration of MTBE. The two observation wells are screened in the Chinle/Alluvium Interface stratigraphic unit. A request to change the 2010 FWGWMP sample frequency from quarterly to annual for OW-50 and OW-52 was approved by NMED in 2012 (2011 Updates, Comment 6).

However, due to the detection of MTBE and 1,2-dichloroethane (EDC) in both wells in 2016, the sampling frequency will be reverted back to quarterly to ensure timely detection of concentration changes and plume migration. The facility Groundwater Monitoring Plan will also be modified to reflect the more frequent sampling schedule as will Table 1, Section 10 (sampling frequency) of this report as well as the Facility Wide Groundwater Monitoring Plan.

In 2016, groundwater samples were collected from observation wells OW-50 and OW-52 for the following analytes: BTEX, MTBE, DRO, GRO, MRO, major anions/cations, WQCC total and dissolved metals, and VOCs.

Observation wells OW-50 and OW-52 were sampled on the following dates during the third quarter in 2016:

WELL ID	SAMPLE DATE
OW-50	9/9/16
OW-52	9/9/16

- BTEX, DRO, GRO, and MRO constituents have not been detected in either OW-50 or OW-52 since 2010 through 2016, however a low concentration of MTBE was detected in both wells in 2016 in the fourth quarter. (Tables 8.5 and 8.5.1).
- Low concentrations of fluoride, chloride and sulfate were detected in 2016 but remain below the applicable standards (Table 8.5.1).
- Low concentrations of total and dissolved arsenic, barium, iron, lead, manganese, selenium, mercury and zinc have been detected in OW-50 and OW-52 in 2016 and are at concentration levels below the applicable standards (Tables 8.5.2 and 8.5.3).
- 1,2-dichloroethane (EDC) was the only organic compound (other than MTBE) detected in 2016 in OW-50 and OW-52 at concentration levels below the EPA MCL standard of 0.005 mg/L. (Table 8.5.4).

6.3.3 RECOVERY WELLS: RW-1, RW-2, RW-5, RW-6

The recovery wells RW-1, RW-2, RW-5, and RW-6 are shallow wells installed in the refinery tank farm located in the east-central portion of the refinery property. The recovery wells are screened within the Chinle/Alluvium Interface stratigraphic unit and are used to recover SPH. RW-1 is located east of Tank 716; RW-2 is located between Tanks 574 and 576; and RW-5 and RW-6 are located in the northwest corner of the tank farm, east of Tanks 337 and 345.

Quarterly inspections for the RW wells include product recovery of SPH using disposable bailers in RW-5

and RW-6, and a portable 2-inch bladder pump for RW-1. Hydrocarbon thickness is measured prior to being removed. Purge water is collected and disposed upstream of the NAPIS. Hydrocarbon recovery is estimated based on measurements and observations.

The RW wells were added to the annual sampling schedule in 2011, per the Approval with Modifications in the 2010 FWGWMP. For 2016, the wells were sampled and evaluated for the following analytes: BTEX, MTBE, DRO, GRO, and MRO.

The recovery wells were inspected and sampled in 2016 on the following dates:

WELL ID	QTR 1	QTR 2	QTR 3	QTR 4
RW-1	3/4/16	6/8/16	9/13/16	11/16/16
RW-2	3/4/16	6/8/16	9/13/16	11/16/16
RW-5	3/4/16	6/7/16	9/13/16	11/16/16
RW-6	3/4/16	6/7/16	9/13/16	11/16/16

- No samples were collected from RW-1 due to SPH levels
- BTEX and MTBE concentrations exceeded applicable standards in RW-2 in 2016. Benzene exceeded the applicable standard in RW-5 and benzene and total xylenes concentrations exceeded applicable standards in RW-6. Concentrations of toluene, total xylenes and ethyl benzene were detected in RW-5 and RW-6 which did not exceed applicable standards. (Table 8.11).
- DRO and GRO concentrations were detected in RW-2, RW-5 and RW-6 in all of 2016 with the highest concentration of GRO in RW-2 (160 mg/L – first quarter), and DRO (14 mg/L in second and third quarters) in RW-2.

Hydrocarbon recovery from RW-1 has shown a steady decrease from 2005 through 2016. In 2016, total hydrocarbon recovery is estimated at 8.5 gallons in 53 gallons of water purged compared to the 2005 estimate of 431 gallons of hydrocarbons in 1,210 gallons of water. No measureable hydrocarbons have been detected in RW-2 since the well was installed. RW-5 and RW-6 have shown a steady decrease in hydrocarbons since 2005. No measureable SPH has been detected in RW-5 and RW-6 since February 2009 and November 2011.

6.4 CONSTITUENT LEVELS IN GROUP D MONITORING WELLS

The Group D wells include three process/production wells, PW-2, PW-3, and PW-4 that supply water to the

refinery and for domestic uses. These process wells reach approximately 1,000 feet and are screened in the San Andreas/Yeso aquifer. Additionally, Group D also includes four observations wells OW-1, OW-10,OW-11, and OW-12. The OW-1 and OW-10 wells are located in the northwest portion of the refinery and are considered artesian wells. OW-11 is located near the entrance of the refinery and OW-12 is west of the tank farm in the surplus yard.

6.4.1 PROCESS WELLS: PW-2, PW-3, PW-4

PW-2, PW-3 and PW-4 are all process/production wells which supply process water to the refinery and domestic water to the company housing and Travel Center. PW-2 is located west of evaporation pond 6 (EP-6). PW-3 is centrally located directly north of the maintenance shop, and PW-4 is located on the southern edge of the refinery property and adjacent to the Pilot Lift Station.

Production well PW-2 is on a staggered 3-year sampling schedule, PW-3 is sampled on an annual basis since 2010 due to the detection of 2-methylnaphthalene exceeding the applicable standard in 2008. In 2013, three organic compounds were detected in PW-4 at very low concentrations and per NMED directive (HWB-WRG-14-006), sampling of this well was switched to semi-annual to begin in 2017 to collect additional data. Ground water samples are collected or the following analytes: BTEX, MTBE, nitrate, WQCC total and dissolved metals, and VOCs and SVOCs.

The process well PW-3 was sampled in 2016 on the following dates:

WELL ID	DATE
PW-3	8/31/16
PW-4	6/10/16; 8/31/16

- No BTEX or MTBE constituents were detected in PW-3 or PW-4 in 2016 (Table 8.6).
- Low concentrations of the following metals (total and dissolved) were detected in both wells in 2016: Arsenic, barium, iron, lead, manganese, selenium, and zinc at levels below the applicable standards (Table 8.6.1 and 8.6.2). Cyanide was at non-detectable levels in both wells.
- There were a total of five organic constituents detected in PW-3 all at concentrations below the applicable standards in 2016. See Table 8.6.3 for a complete list.
- In 2016, 10 organic compounds were detected at concentration levels below the applicable standards in PW-4.

6.4.2 OBSERVATION WELLS: OW-1 AND OW-10

Observation well OW-1 is an artesian well located on the west side of EP-6. Well OW-10 is located downgradient from OW-1 on the east side of EP-9. Wells OW-1 and OW-10 are screened in the Sonsela stratigraphic unit. Inspection requirements for these two wells were modified in 2010, per the 2010 FWGWMP, and included sampling on a quarterly basis. In agreement with OCD, approved by NMED, the third quarter sampling was combined with the annual sampling event. In 2016, groundwater samples from OW-1 and OW-10 were evaluated for the following analytes: BTEX, MTBE, DRO, GRO, MRO, major cations/anions, WQCC total and dissolved metals, VOCs.

Groundwater samples were collected from OW-1 and OW-10 in 2016 on the following dates:

WELL ID	QTR 1	QTR 2	QTR 3	QTR 4
OW-1	3/3/16	6/6/16	9/6/16	11/15/16
OW-10	3/3/16	6/6/16	9/6/16	11/15/16

- Low concentrations of benzene, ethyl benzene and MTBE were detected in OW-1 in 2016 below applicable standards. Only the constituent MTBE was detected in OW-10 in all of 2016 at concentration levels below the applicable standard of 0.143 mg/L (NMED Tap Water). (Table 8.12).

- Low concentrations of anions were detected in OW-1 throughout 2016 at concentration levels below the applicable standard and no DRO/GRO/MRO were detected. OW-10 had exceedances of chloride in all of 2016 above the WQCC Standard of 250 mg/L. GRO was detected in the first, second and fourth quarters of 2016 in OW-10. (Table 8.12.1).

- Total metals (Iron and manganese) were detected at concentration levels above the applicable standards in OW-1 in 2016.

- Metals (total and dissolved): Low concentrations of the following metals were detected in both OW-1 and OW-10 In 2016 at concentration levels below applicable standards: Arsenic, barium, chromium, iron, lead, manganese, selenium, silver, mercury and zinc. See Table 8.12.1 and 8.12.2 for a complete list.

- In 2016 no VOCs were detected in OW-1, however in OW-10 four organic compounds were detected at concentrations below the applicable standards and are listed as follows: 1,1-Dichloroethane, 1,1-dichloroethene, 1,2-dichloroethane (EDC) and cis-1,2-DCE. (Table 8.12.4).

6.4.3 OBSERVATION WELLS: OW-11 AND OW-12

Observation well OW-11 is located within the refinery property (southeast) on the west side of the main entrance. Well OW-12 is located within the surplus or bone yard located west and slightly north of the primary tank farm. OW-11 and OW-12 are screened in the Sonsela stratigraphic unit.

Well inspections and sampling are conducted annually. In 2016, groundwater samples from the two wells were evaluated for the following analytes: BTEX, MTBE, major anions/cations, GRO, DRO, MRO, WQCC total and dissolved metals, VOCs, and SVOCs. Observation well OW-11 and OW-12 were sampled in the third quarter of 2016 on the following dates:

WELL ID	DATE
OW-11	9/9/16
OW-12	9/8/16

- BTEX and MTBE have not been detected in OW-11 and OW-12 since 2006 and remained non-detect for 2016 (Table 8.4).
- Sulfate concentrations continue to exceed the applicable standards (600 mg/L) in OW-11. (Table 8.4.1).
- GRO, DRO and MRO were not detected in OW-11 and OW-12 in 2016 (Table 8.4.1).
- The following metals (total and dissolved) were detected at concentrations below the applicable standards in OW-11 and OW-12 in 2016: Arsenic, barium, chromium, iron, lead, manganese, selenium, and mercury. (Tables 8.4.2 and 8.4.3). As noted in Table 8.4.1, the phosphate concentration (0.37 mg/L) exceeded the applicable standard (4.0×10^{-4} mg/L) during this sampling event. A dissolved zinc concentration of 0.0091 mg/L was also reported or OW-11, which is well below the standard of 10 mg/L.
- No organic compounds were detected in OW-11 in 2016 (Table 8.4.4).

6.5 CONSTITUENT LEVES IN GROUP E MONITORING WELLS

To date, a total of 44 monitoring wells (MKTF-1 through MKTF-44) have been installed to aid in delineating the extent of a hydrocarbon seep discovered in 2013, directly west of crude tanks T-101 and T102. During the investigation, a pre-existing well (labeled as MKTF-45) was found directly west of the truck-loading rack. Each of the wells has been constructed into permanent monitoring wells, and these wells are designated as Group E wells.

6.6 CONSTITUENT LEVELS FOR MKTF WELLS

In 2016, groundwater samples were collected from the MKTF wells and evaluated for the following analytes: BTEX, MTBE, DRO, GRO, MRO, major cations/anions, metals, VOCs, and SVOCs. Wells that had a hydrocarbon layer were not sampled.

- During the first quarter 2016, SPH was detected in wells MKTF-03 (0.10'), MKTF-05 (0.60'), MKTF-06 (0.97'), MKTF-07 (2.88'), MKTF-08 (0.75'), MKTF-12 (0.65'), MKTF-13 (0.87') MKTF-14 (0.44'), MKTF-15 (0.17'), MKTF-36 (0.06'), MKTF-37 (0.04'), and MKTF-45 (0.18'). During the second quarter 2016, SPH was detected in wells MKTF-01 (1.16'), MKTF-03 (4.28'), MKTF-05 (0.53), MKTF-06 (0.94'), MKTF-07 (2.59'), MKTF-08 (0.70'), MKTF-12 (1.32'), MKTF-13 (1.20') MKTF-14 (2.33'), MKTF-15 (0.22'), MKTF-36 (0.02'), MKTF-37 (0.02'), and MKTF-45 (0.32'). In the third quarter of 2016, SPH was detected in wells MKTF-01 (1.50'), MKTF-03 (2.40'), MKTF-05 (3.04'), MKTF-06 (1.08'), MKTF-07 (2.41'), MKTF-08 (0.66'), MKTF-12 (0.32'), MKTF-13 (0.98'), MKTF-14 (1.69'), MKTF-23 (0.11'), MKTF-26 (1.37'), MKTF-36 (0.01'), and MKTF-45 (0.45'). During the fourth quarter 2016, SPH was detected in wells MKTF-01 (1.35'), MKTF-03 (1.10'), MKTF-05 (0.84'), MKTF-06 (0.74'), MKTF-07 (1.98'), MKTF-08 (1.48'), MKTF-12 (0.29'), MKTF-13 (0.96'), MKTF-14 (1.10'), MKTF-23 (0.12'), MKTF-26 (1.39'), and MKTF-45 (0.43').

- During 2016, benzene concentrations exceeded the standard of 0.005 mg/L in the following wells: MKTF-1, MKTF-2, MKTF-4, MKTF-9, MKTF-10, MKTF-11, MKTF-15 through MKTF-26, MKTF-35, MKTF-36, MKTF=37 and MKTF-39. The greatest benzene concentration (23 mg/L) during 2016 occurred in well MKTF-15 during quarter three (Table 8.17).

- Toluene concentrations exceeded the standard of 0.75 mg/L in the following wells: MKTF-1, MKTF-10, MKTF-11, MKTF-15, and MKTF-23. The highest toluene concentration (23 mg/L) occurred in well MKTF-10 in the first quarter 2016. (Table 8.17).

- Ethylbenzene concentrations exceeded the standard of 0.7 mg/L in the following wells: MKTF-1, MKTF-4, MKTF-10, MKTF-36, MKTF-15, MKTF-16, MKTF-19 and MKTF-20. The highest concentration (2.1 mg/L) occurred in MKTF-15 during the fourth quarters of 2016. (Table 8.17).

- Total xylenes concentrations exceeded the standard of 0.62 mg/L in the following wells: MKTF-1, MKTF-4, MKTF-10, MKTF-11, MKTF-15, MKTF-16, MKTF-19 MKTF-20, MKTF-21, MKTF-23, and MKTF-37. The highest concentration (9.2 mg/L) occurred in well MKTF-20 in the first and fourth quarters 2016. (Table 8.17).

- MTBE concentrations exceeded the standard of 0.143 mg/L in the following wells: MKTF-1, MKTF-2, MKTF-4, MKTF-9, MKTF-16, MKTF-17, and MKTF-19 through MKTF-25, MKTF-32, MKTF-33, and MKTF-36. The highest concentration (10.0 mg/L) occurred in well MKTF-19 in the fourth quarter 2016 (Table 8.17).

- The constituent DRO and GRO was detected in MKTF-1 through MKTF-25, MKTF-35, MKTF-36, MKTF-37, MKTF-39 and MKTF-42. GRO was also detected in MKTF-26, through MKTF-35, MKTF-38, MKTF-43, and MKTF-44. There were no detectable concentrations of MRO in any of the MKTF wells. (Table 8.17.1).

- Chloride concentration exceedances above the standard (250 mg/L) were found in the following wells: MKTF-1, MKTF-2, MKTF-10, MKTF-11, MKTF-15, MKTF-16, MKTF-20, MKTF-24, MKTF-25, MKTF-26, MKTF-27, MKTF-28, MKTF-30, MKTF-31, MKTF-32, MKTF-34, MKTF-38, MKTF-39, MKTF-40, MKTF-41, MKTF-42, MKTF-43, and MKTF-44. (Table 8.17.1).

- The fluoride standard of 1.6 mg/L was narrowly exceeded in wells MKTF-2 (1.8 to 2.7 mg/L) and

MKTF-20 (2.1 to 3.1 mg/L) in 2016.

- The nitrate standard of 10 mg/L was exceeded in MKTF-34 (18 mg/L) and MKTF-43 (62 mg/L). Although each well only exceeded the standard in one quarter of the year, it represents the first exceedance of nitrate for either well.

- Sulfate exceeded the standard of 600 mg/l in the first and second quarters of 2016 at MKTF-29 and in all quarterly samples collected at MKTF-43.

- Total metals above applicable standards were detected in the following wells:: Table 8.17.2):
    - Arsenic (0.01 mg/L): MKTF-11, MKTF-16, MKTF-19, MKTF-20, MKTF-21, MKTF-23, MKTF-24, MKTF-36, MKTF-43 and MKTF-44.
    - Barium (1.0 mg/L): MKTF-1, MKTF-4, MKTF-10, MKTF-11, MKTF-15, MKTF-16, MKTF-18, MKTF-19, MKTF-20, MTKF-21, MKTF-22, MKTF-24, MKTF-25, MKTF-33, MKTF-35, MKTF-36, MKTF-39.
    - Chromium (0.05 mg/L): MKTF-24
    - Iron (1.0 mg/L): MKTF-1 through MKTF-44.
    - Lead (0.015 mg/L): MKTF-19, MKTF-22, MKTF-24, MKTF-25, MKTF-26, MKTF-30, MKTF-35, MKTF-40, and MKTF-44.
    - Manganese (0.2 mg/L): All wells with the exception of MKTF-34.Selenium (0.05 mg/L): MKTF-43.

- Dissolved metals concentrations above applicable standards were noted in the following wells (Table 8.17.3):
    - Arsenic: MKTF-4, MKTF-11, MKTF-16, MKTF-19, MKTF-20, MKTF-21, MKTF-36, and MKTF-43.
    - Barium: MKTF-1, MKTF-4, MKTF-10, MKTF-11, MKTF-15, MKTF-16, MKTF-18, MKTF-19, MKTF-20, MKTF-21, MKTF-22, MKTF-36, and MKTF-39.
    - Iron: MKTF-1, MKTF-4, MKTF-9, MKTF-10, MKTF-11, MKTF-15, MKTF-16, MKTF-18, MKTF-19, MKTF-20, MKTF-21, MKTF-22, MKTF-23, MKTF-35, MKTF- 36, and MKTF-39.
    - Manganese: All wells with the exception of MKTF-28, MKTF-30, MKTF-31, MKTF-32, MKTF-33, and MKTF-34, MKTF-40, MKTF-41 and MKTF-44.
    - Selenium: Wells MKTF-41 (0.06 mg/L) and MKTF-43 (0.091) exceeded the groundwater protection standard in 2016.

Fourteen semi volatile organic compounds were detected that exceeded applicable standards in 2016 and are listed as follows: See Table 8.17.4 for the complete list.

- Aniline
- Benz(a)anthracene
- Bis(2-ethylhexyl)phthalate
- Butylbenzenephthalate
- 2,4 dimethylphenol
- Fluorene
- 1-methyl naphthalene
- 2-methylnaphthalene
- 2-methylphenol
- 3+4-methylphenol
- Naphthalene
- Pentachlorophenol
- Phenanthrene
- Phenol

Fifteen volatile organic compounds were detected in the MKTF wells in 2016 at concentration levels above the applicable standards and are listed as follows: See Table 8.17.5 for the complete list.

- 1,2,4-trimethylbenzene
- 1,3,5-trimethylbenzene
- 1,2-dichloroethane (EDC)

6.7 CONSTITUENT LEVELS FOR EVAPORATION PONDS, INFLUENTS, AND EFFLUENTS

There are eleven evaporation ponds located within the northwest section of the refinery. Evaporation pond 1 is more commonly known as Pond 1 and is considered separate from the remaining SMWU No. 2 Evaporation Ponds. Pond 1, which is out of service, is separated by a dike along the north side of aeration lagoon 1 (AL-1) and aeration lagoon 2 (AL-2), and was used as a holding pond for the aeration lagoons. Evaporation ponds 2 through 6 are separated by dikes and are located west of AL-2. Evaporation pond 9 (EP-9) is to the south and is separated from EP-2 through EP-6 by a two-track road. Evaporation ponds 7, 8, 11, 12A, and 12B are also separated by dikes and are located on the northwest corner of the refinery. In addition to the evaporation ponds, there is one effluent points that is routinely monitored.

6.7.1 EVAPORATION PONDS 1 THROUGH 12B

Samples have been collected annually from Pond 1 and EP-2 through EP-8 since 2007. In 2011, EP-9, EP-11, EP-12A, and EP-12B were added to the sample list, per the 2010 FWGWMP, and the sample frequency was increased to semi-annually for all of the ponds. Pond 1 is no longer in service.

In 2016, samples were collected from the evaporation ponds for the following analytes: BTEX, MTBE, major anions/cations, biochemical oxygen demand (BOD), chemical oxygen demand (COD), e-coli bacteria, WQCC total and dissolved metals, and VOCs and SVOCs. EP-2 through EP-9, EP-11, EP-12A, and EP-

12B were sampled in 2016 on the following dates:

SAMPLE LOCATION	DATE	DATE
Ponds 2 – 12B	3/8/16	8/29/16

- Benzene was detected above the applicable standard of 0.005 mg/L in evaporation ponds (EP-2 and EP-3) in 2016. Benzene concentrations below the applicable standard were detected in EP-4, EP-5 and EP-12. Toluene, ethylbenzene, and total xylenes have been detected at concentration levels below applicable standards in the following evaporation ponds: EP-2, EP-3, EP-4 and EP-12B. (Table 8.15).

- Concentrations of fluoride, chloride, and sulfates exceeded the applicable WQCC standards in each evaporation pond during 2016 (Table 8.15). In 2016, BOD concentrations exceeded the general requirement of the 20 NMAC 6.2.3103 (<30 mg/L) in each of the evaporation ponds except for EP-8 and EP-11. COD concentrations exceeded the general requirement (<125 mg/L) in each of the ponds.

- E-coli bacteria counts above the standard of 500 organisms per 100 ml of water were encountered in EP-2, EP-3, EP-4, EP-12A and EP-12B. Andeavor is unaware of any untreated wastewater that would carry this indicator organism being discharged into the evaporation ponds but will further investigate this occurrence. It is worth noting that a study published in 2006 (Ishii, S., Ksoll, WB, Hicks, RE, and Sadowsky, MJ; Presence and Growth of Naturalized Escherichia coli in Temperate Soils from Lake Superior Watershed; PubMed.gov; Jan. 2006; 72(1), pgs. 612-621) identified e-coli bacteria that occurred naturally in the soils and would seem to make the use of e-coli as an indicator organism of limited use. The publication states: “The presence of Escherichia coli in water is used as an indicator of fecal contamination, but recent reports indicate that soil populations can also be detected in tropical, subtropical, and some temperate environments. The presence of significant populations of naturalized populations of E. coli in temperate soils may confound the use of this bacterium as an indicator of fecal contamination.” Since the evaporation ponds are unlined, earthen structures, it may be possible that the e-coli bacteria are not a good indicator of fecal contamination.

- Metals (total and dissolved): Arsenic, iron, manganese and selenium have been detected in several of the evaporation ponds in 2016 above the WQCC and EPA MCL listed standards. See Table 8.15.2 for a complete list.

- The constituent bromomethane was detected in EP-3, EP-12A and EP-12B above the NMED Tap Water standard of 0.00754 mg/L in 2016. See Table 8.15.4 for the complete list.

- Two SVOCs were detected exceeding the applicable standards in the following evaporation ponds in 2016: EP-2, EP-3, EP-4, EP-12A and EP-12B = bis (2-ethylhexyl)phthalate and Phenol in EP-2, EP-3, EP-4, EP-5, EP-6 and EP-12B. See Table 8.15.5 for the complete list.

- Four SVOCs were also detected exceeding applicable standards in EP-8 and are listed as follows: Ben(a)anthracene, benzo(a)pyrene, Benzo(b)fluoranthene and indeno(1,2,3-cd)pyrene. See table 8.15.5 for a complete list of VOCs.

6.7.2 INFLUENTS: AL-1, AL-2, AND EP-1

The start-up of the new WWTP occurred in May 2012. By the end of June 2012, all of the processed water going into AL-1 was re-routed to the WWTP, via Tank 35 and the NAPIS unit, with the exception of the Pilot lift station. Some gravitational flow continued from AL-1 to AL-2 and from AL-2 to Pond 1 (EP-1) through

the second half of 2013.

The aeration lagoons and pond 1 are no longer in service and no samples were collected in 2016.

6.7.3 EFFLUENTS: AL-2 TO EP-1, PILOT, AND NAPIS

All effluents have been non-existent since June 2013 due to re-routing waters to the WWTP. The last effluent sample from AL-2 was in June 2013. The Pilot effluent was rerouted in June 2013 while the NAPIS unit was re-routed mid-June 2012. No effluent analyses are available for 2016.

6.7.4 OUTFALL BW TO EP-2

BW is defined as reverse osmosis water coming from the boiler unit. The flow from the boiler unit discharges into EP-2 through a 4-inch PVC pipe. The reverse osmosis water no longer discharges to EP-2 and has been rerouted back into the units for reuse. No samples were collected in 2016.

6.7.5 OUTFALL STP1 to EP-2 Inlet

The EP-2 Inlet designation was changed to STP1 to EP-2 in the second half of 2012 due to the startup of the new WWTP and the new sanitary treatment pond (STP-1). STP-1 effluent now flows into the northeast corner of EP-2. Sampling of STP1 to EP-2 inlet was changed to quarterly beginning the second quarter of 2016 per NMED directive dated May 18, 2016, and sampled for the following analytes: BTEX, MTBE, VOCs, GRO, DRO, MRO, BOD, COD, and TDS.

- No BTEX and MTBE constituents were detected in all of 2016. DRO was detected in all of 2016 and GRO was detected in the third quarter. MRO was not detected. The TDS concentrations exceeded the standard of 1,000 mg/L in the second, third, and fourth quarter of 2016. (Table 8.16).
- BOD and COD concentrations exceeded the applicable standards in 2016 (Tables 8.16.1).
- Three organic compounds were detected in 2016: (Acetone, 2-Butanone, Carbon Disulfide) all at concentrations below the applicable standards No other VOCs were detected in 2016 (Tables 8.16.2).

6.8 ADDITIONAL SAMPLING AND/OR CHANGES

Requirements by NMED per directive dated May 18, 2016 (HWB-WRG-14-006)

- The permittee must sample PW-4 during the next scheduled sampling event and then semi-annually thereafter;

- Since EDC is a lead scavenger, the Permittee must add analysis for 1,2-Dibromethane (EDB) in all monitoring wells where EDC has been detected.

- Permittee must include analysis for MTBE, EDC and EDB at OW-1 starting with the next round of quarterly sampling.

- The Permittee must sample the EP-2 inlet on a quarterly basis

- The Permittee may discontinue analysis for uranium in all wells

- The Permittee must edit Table 1 to remove the statement "[a]ll wells including Recovery Wells."

- Permittee must submit a work plan and/or additional information for the following:
    - The Permittee must prepare a work plan for installation of a replacement well and propose to properly abandon OW-1.

    - Additionally, the Permittee must submit a work plan to propose additional wells downgradient of the Evaporation Ponds per OCD's requirement (Comment 8).

SECTION 7

CONCLUSIONS AND RECOMMENDATIONS

This section is an overview of the analytical water quality data collected to identify potential impacts to the groundwater and determine if further monitoring or site investigations are required.

7.1 GROUP A

The boundary wells (BW-1A, BW-1B, BW-1C, BW-2A, BW-2B, BW-2C, BW-3A, BW-3B, and BW-3C) located in the northwest corner of the refinery along the west sides of evaporation ponds 7, 8 and 11 have not shown any detection of BTEX or MTBE constituents during annual sampling events. Three of the nine wells (BW-1A, BW-1B, and BW-3A) continue to indicate no water level since their original installation in 2003 and 2004. Fluoride concentrations were detected above WQCC standards in BW-1C, BW-2B, and BW-2C, which may be naturally occurring in the groundwater. No VOCs were detected in any of the BW wells in 2016. SVOC analytical requirement was discontinued from the BW annual sampling event per approval from NMED dated July 24, 2015.

RECOMMENDATION: *Continue with current monitoring schedule. There have been no significant changes or discoveries of contaminants that warrant any changes.*

The MW (MW-1, MW-2, MW-4, and MW-5) series of wells are located around the RCRA LTU. No detectable concentration levels of BTEX or MTBE constituents have been found in the groundwater samples collected from these wells. No metals (total or dissolved) exceeded the applicable standards; however, very low concentrations of arsenic, barium, lead, manganese, selenium and mercury were detected in most of the MW series of wells. There were five organic compounds detected in the MW wells at low concentration levels below applicable standards (bis (2-ethylhexyl)phthalate, benzoic acid, d-n-octylphthalate, dimethylphthalate and pyrene. These wells are also monitored under the RCRA Post Closure Permit on a 10-year cycle. The first cycle was completed in 2009/2010.

RECOMMENDATION: *Continue with current monitoring schedule and the RCRA 10 year monitoring.*

The SMW (SMW-2, SMW-4) wells are also located around the RCRA LTU and are screened in the Chinle/Alluvium Interface stratigraphic unit. These wells are also monitored under the RCRA Post-Closure Permit on a 10-year cycle. The first cycle was completed in 2009/2010. No detectable concentration levels of BTEX constituents were found in these wells from 2006 through 2016. MTBE was detected in SMW-2 at concentration levels below the NMED Tap Water standard of 0.143 mg/L. SMW-2 also had elevated chloride and sulfate levels, and manganese was detected exceeding the WQCC standard in both SMW-2 and SMW-4. Five organic constituents were detected at concentration levels below the applicable standards in 2016. (Benzoic acid, bis(2-ethylhexyl)phthalate, di-n-octylphthalate, dimethylphthalate, and pyrene).

RECOMMENDATION: *Continue with current monitoring schedule and the RCRA 10 year monitoring.*

7.2 GROUP B– GROUNDWATER MONITORING

GWM-1 contained SPH throughout 2016 and was not sampled. There was an insufficient volume of water in GWM-2 during the fourth quarter of 2013 for sample collection, and the well was reported dry for all of 2014 and 2016. GWM-3 was dry during 2013, 2014 and 2016.

RECOMMENDATION: *Continue with current monitoring schedule. There have been no significant changes or discoveries of contaminants that warrant any changes.*

The GWM wells located at the aeration lagoons were not sampled in 2016. GWM-2 and GWM-3 had no detection of a water level since 2014 through 2016. In the fourth quarter 2015, an SPH level was detected in GWM-1 and in all of 2016 and no ground water samples were collected. Wells continue to be checked on a quarterly basis.

RECOMMENDATION: *Continue with current inspection schedule. Monitor GWM-1 on a more regular basis: gauging water/SPH level, purge dry to check for recharge rate and monitor level of SPH after each purge.*

In 2016 well NAPIS-1 recorded detectable concentrations of MTBE for the first time. However, the detected concentrations were below applicable standards, fluctuating from 0.002 mg/L to a low of 0.00087 mg/L. No changes in NAPIS-2, NAPIS-3 or KA-3, continued detection of Benzene and MTBE. Fluoride and chloride continue to be detected in NAPIS-1, NAPIS-2 and NAPIS-3 and KA-3. However, the applicable water quality standards for fluoride and chloride were exceeded only in wells NAPIS-2 and NAPIS-3. Metals (total and dissolved) continue to be detected in all of the wells through 2016. Metals that were detected in various wells at concentrations above the applicable cleanup standard included iron, manganese, and uranium. Arsenic, selenium, and zinc were present at concentrations below applicable regulatory standards. No samples were collected for SVOC analysis from the NAPIS or KA-3 wells. This was due to the contract sampler not using the updated sampling schedule. The collection of samples for SVOC analysis will resume in the third quarter of 2018. No VOCs were detected in NAPIS-1 above screening levels; 14 VOCs were detected in NAPIS-2 all at concentration levels below applicable standards, except 1-methylnaphthalene and naphthalene. Twelve VOCs were detected in NAPIS-3 at concentration levels below applicable standards and only 1-methylnaphthalene was detected above screening levels. In KA-3 ten VOCs were detected. Most were at concentration levels below applicable standards, however, 1-methylnaphthalene and naphthalene were detected at concentrations above applicable standards

RECOMMENDATION: *Continue with current inspection schedule. No changes required.*

There are three leak detection units on the NAPIS Unit which are inspected for fluid level. Quarterly inspections of the units have indicated the continued presence of fluids in the East LDU and West LDU. The Oil Sump LDU has not had any detection of fluid since the second half of 2013. Both LDUs continue to be pumped on a regular basis. The East Bay of the LDU was out of service and closed in 2015. The presence of water in the East LDU during that period suggests that there may be an inflow through an opening in the liner. Andeavor intends to conduct testing on the LDU to ascertain the source of the water in the East LDU. Recent water column measurements on the West LDU also indicate that the bay is leaking into the LDU, or that there is a source of inflow into the LDU Plans are to inspect the east bay, place it back in service and then take the west bay out of service for inspection.

RECOMMENDATION: *Continue with current inspection schedule. No changes required.*

A new well was installed on July 17, 2012, designated as OAPIS-1. The installation of this well is from a site investigation conducted according to the Investigation Work Plan Solid Waste Management Unit (SMWU)

No. 1 Aeration Basin and SMWU No. 14 Old API Separator. No significant deviations from past analytical with the exception of cyanide detected in the fourth quarter at a concentration level (0.504 mg/L) above the WQCC standard of 0.2 mg/L.. The source of the cyanide is uncertain as it is not a feedstock used by the refinery in any of its processes.

RECOMMENDATION: *Continue with current inspection schedule. No changes required.*

7.3 GROUP C – GROUNDWATER MONITORING

Groundwater monitoring activities from the Group C wells (northeast side of the Refinery) have shown that an MTBE plume exists in the area of OW-13, OW-14, OW-29, and OW-30. In March of 2010, dedicated pumps were installed in all four wells to prevent possible cross contamination from sampling equipment and or field activities. Although concentration levels of MTBE in OW-13 does not exceed the applicable standard of 0.143 mg/L, sample data indicates a steady increase of MTBE from year to year. Of the four wells OW-14 is the only well where two constituents (benzene and MTBE) have been consistently detected in the groundwater samples collected since 2006 that have exceeded the applicable standards. These two constituents continued to increase from year to year through 2016. OW-14 is located down-gradient from two recovery wells RW-1 and RW-2. RW-1 is the only well where hydrocarbons are continually recovered.

Downgradient from OW-14 is OW-29 and OW-30 and the analytical data from both of these wells indicates that MTBE is present in the groundwater at concentration levels exceeding the NMED Tap Water standard of 0.143 mg/L since March of 2010 in OW-29 and December 2007 in OW-30. Analytical data for these four wells indicate a steady increase of MTBE concentration levels indicating that the MTBE plume is slowly migrating in a northerly direction down-gradient from RW-1 and RW-2. The stratigraphic units in which these wells are screened is the Chinle/Alluvium Interface.

RECOMMENDATION: *An investigation work plan was initiated concerning OW-14 contaminant plume migration. Additional soil borings and wells were installed in the tank farm area and results are being evaluated. Continue with current sampling requirements. No changes required.*

Two new wells (OW-50 and OW-52) were installed in October 2009 downgradient of OW-13, OW-14 and OW-29 to monitor possible migration of MTBE in a north, north-east direction. No detectable concentration levels of BTEX or MTBE constituents were detected in OW-50 and OW-52 through 2015, however, during the annual sampling event in 2016, MTBE was detected in low concentrations in both OW-50 and OW-52 and 1,2-dichloroethane (EDC) was also detected in both wells at concentration levels below the applicable

standard of 0.005 mg/L.

RECOMMENDATION: *Due to the detection of MTBE and EDC in wells OW-50 and OW-52, sampling frequency for these wells will be changed to a quarterly basis. This will also be noted in the Facility Wide Groundwater Sampling Work Plan. Both MTBE and EDC will be added to the analytical requirements for each well. Analysis for EDC will be conducted using EPA Method 8011.*

The inspection of the four recovery wells (RW-1, RW-2, RW-5 and RW-6) will continue as scheduled along with SPH recovery. No changes in product recovery are required and will continue with scheduled quarterly inspections. Product recovery continues in RW-1 as there is a measureable hydrocarbon column thickness. Field notes indicate that although the SPH thickness level in RW-1 has generally increased since the first quarter of 2013, hydrocarbon recovery has shown a general decrease from 2005 through 2016. Total hydrocarbon recovery is estimated at 8.5 gallons for 2016 compared to 431 gallons in 2005. Hydrocarbon recovery is done only during quarterly inspections because of the decline in hydrocarbons observed in the well when it first began in 2005 when the well was continuously pumped. Additional information regarding characteristics of RW-1 will be collected during field work from the approved Work Plan for investigation at OW-14. RW-5 and RW-6 product recovery has also been declining. From 2010 through 2016, no product has been recovered from RW-5 and no product was recovered from RW-6 from 2012 to 2016. Although there is no measureable product level in RW-5 and RW-6, both wells will continue to be bailed as there is evidence of hydrocarbons in the wells from observing the bailed water (slight odor with a visible sheen).

RECOMMENDATION: *Continue with current inspection/sampling schedule. No changes required.*

7.4 GROUP D – GROUNDWATER MONITORING

PW-2, PW-3 and PW-4 are all process/production wells that are all set at around 1000 feet. All three of these wells are sampled every three years with the exception of PW-3 which was changed to annual in 2009 due to the detection of 2-methylnaphthalene in January 2008. Although the samples collected in August 2008 were all non-detect, it was determined by NMED that annual sampling was required for PW-3. PW-4 was switched to semi-annual sampling in the second half of 2016 per NMED directive (HWB-WRG-14-06) due to the detection of VOCs. In 2016 10 VOCs were detected at low concentration levels below the applicable standards. PW-2 remains on a three-year sample event and next scheduled sample date for PW-2 is 2017.

RECOMMENDATION: *Continue with current inspection/sampling schedule. No changes required.*

OW-1 is a flowing artesian well located on the west section of the refinery property. Historically, OW-1 is a relatively clean well; however, very low concentrations of benzene, toluene, total xylenes, and MTBE were detected for the first time in the fourth quarter of 2015. Only MTBE continued to be detected throughout 2016.

OW-10 is completed in the Sonsela Aquifer and is located directly east of evaporation pond 9 (EP-9). No BTEX constituents were detected in all of 2016 in OW-10 with the exception of MTBE at concentrations below the applicable standard of 0.143 mg/L. Due to the detection of MTBE in OW-10, NMED and OCD has requested that an additional boundary monitoring well be installed. Four organic compounds were detected in 2016: 1,1-dichloroethane, 1,1-dichloroethene, 1,2-dichloroethane (EDC) and cis-1,2-DCE, all at concentration levels below the applicable standards.

RECOMMENDATION: *Continue with current inspection/sampling schedule. No changes required.*

Observation well OW-11 is located within the refinery property (southeast) on the west side of the main entrance and OW-12 is located within the surplus yard located west and slightly north of the primary tank farm. OW-11 and OW-12 are screened in the Sonsela stratigraphic unit. There was no detection of BTEX, MTBE, GRO/DRO/MRO or VOC constituents in 2016. Fluoride and sulfate were detected above screening levels in OW-11, which is an up-gradient background monitoring well.

RECOMMENDATIONS: *Continue with current sampling schedule.*

7.5 GROUP E – GROUNDWATER MONITORING

To date, a total of 44 permanent monitoring wells (MKTF-1 through MKTF-44) have been installed to aid in delineating the extent of a hydrocarbon seep discovered in 2013, directly west of crude tanks T-101 and T-102. During the investigation, a pre-existing well (labeled as MKTF-45) was found directly west of the truck-loading rack. The MKTF wells are sampled quarterly. BTEX, MTBE, DRO, GRO, total and dissolved metals, and several VOCs and SVOCs have been detected in many of the wells above the referenced standards. Of the 44 wells installed, fourteen MKTF wells have been identified having an SPH level.

RECOMMENDATIONS: *Continue with current sampling schedule in 2017. This will establish a clear baseline of at least three years of quarterly monitoring in most MKTF wells. It is recommended to reduce the monitoring frequency in 2018, as many of the analytical results indicate little change over the monitoring period, such that continued quarterly monitoring is not warranted. At the wells identified as having an SPH level, begin a routine hydrocarbon recovery effort to evaluate recharge rate and record volumes of water and SPH recovered. Continue on-going recovery at existing sumps.*

7.6 ADDITIONAL MONITORING

- Continue with the sampling requirements of the most current approved Facility Wide Groundwater Monitoring Work Plan.
- In order to prevent duplication and potential conflict of documentation, recommendations and/or changes to monitoring requirements will be included in future investigation work plans.
- Submit the Annual Groundwater Monitoring Report on or before September 1 of every year.
- Submit recommendations to change or modify sampling requirements as needed.
- Conduct site assessments as required when spills/leaks are discovered.

DEFINITIONS

NE = Not established

NA = Not analyzed

Bold and highlighted values represent values above the applicable standards

STANDARDS

WQCC 20 NMAC 6.2.3103 - Standards for Ground Water of 10,000 mg/l TDS Concentration or Less.

a) Human Health Standards; b) Other Standards for Domestic Water

40 CFR 141.62 Detection Limits for Inorganic Contaminants

EPA Regional Screening Level (RSL) Summary Table

NMED Risk Assessment Guidance for Investigations and Remediations Table A-1

NOTES

1) Due to inclement weather conditions in December 2007, the 2007 annual sampling was completed in January 2008.

2) PW-2: Detected for the first time. In the field blank submitted, toluene was detected at 0.0017 mg/L.

3) PW-2 was re-sampled due to the detection of PCE in the 10/26/2011 sample.

4) PW-4: Detected for the first time.

8.7 GWM-1, GWM-2, GWM-3

DEFINITIONS

NE = Not established
NA = Not analyzed
Bold and highlighted values represent values above the applicable standards

STANDARDS

WQCC 20 NMAC 6.2.3103 - Standards for Ground Water of 10,000 mg/l TDS Concentration or Less.
40 CFR 141.62 Detection Limits for Inorganic Contaminants
NMED Tap Water
EPA Regional Screening Level (RSL) Summary Table

NOTES

1) Was not sampled in September due to low recharge rate.

8.8.1 NAPIS-1, NAPIS-2, NAPIS-3, KA-3

DEFINITIONS

NE = Not established

NA = Not analyzed

BOLD values represent values above the applicable standard

STANDARDS

WQCC 20 NMAC 6.2.3103 - Standards for Ground Water of 10,000 mg/l TDS Concentration or Less.

40 CFR 141.62 Detection Limits for Inorganic Contaminants

NMED Tap Water

EPA Regional Screening Level (RSL) Summary Table

NOTES

1) 12/14/11 - General Chemistry parameters missed this quarter. Notified NMED and instructed to re-sample for general chemistry parameters only.

2) Resampled for General Chemistry parameters only.

DEFINITIONS

NE = Not established

NA = Not analyzed

Bold and highlighted values represent values above the applicable standards

STANDARDS

WQCC 20 NMAC 6.2.3103 - Standards for Ground Water of 10,000 mg/l TDS Concentration or Less.

a) Human Health Standards; b) Other standards for Domestic Water

40 CFR 141.62 Detection Limits for Inorganic Contaminants

NMED Risk Assessment Guidance for Investigations and Remediations Table A-1

NOTES

1) Oil Sump LDU - Dry - 2013 Third and fourth Quarters. 2014 and 2015 - dry.

8.10.1 LEAK DETECTION UNITS (East LDU, West LDU, Oil Sump LDU)

DEFINITIONS

NE = Not established

NA = Not analyzed

Bold and highlighted values represent values above the applicable standards

STANDARDS

WQCC 20 NMAC 6.2.3103 - Standards for Ground Water of 10,000 mg/l TDS Concentration or Less.

a) Human Health Standards; b) Other standards for Domestic Water

40 CFR 141.62 Detection Limits for Inorganic Contaminants

NMED Risk Assessment Guidance for Investigations and Remediations Table A-1

NOTES

1) Oil Sump LDU - Dry - 2013 Third and fourth Quarters. 2014 and 2015 - dry.

2) West LDU - 2014 - fourth quarter - not enough water to collect samples (West bay out of service). 2015 - Second Quarter - not enough water to collect samples.

3) East LDU - No samples collected third quarter 2014.

DEFINITIONS

NE = Not established

NA = Not analyzed

Bold and highlighted values represent values above the applicable standards

STANDARDS

WQCC 20 NMAC 6.2.3103 - Standards for Ground Water of 10,000 mg/l TDS Concentration or Less.

a) Human Health Standards; b) Other standards for Domestic Water

40 CFR 141.62 Detection Limits for Inorganic Contaminants

NMED Risk Assessment Guidance for Investigations and Remediations Table A-1

NOTES

1) Oil Sump LDU - Dry - 2013 Third and fourth Quarters. 2014 and 2015 - dry.

2) West LDU - 2014 - fourth quarter - not enough water to collect samples (West bay out of service). 2015 - Second Quarter - not enough water to collect samples.

3) East LDU - No samples collected third quarter 2014.

8.11 RW-1, RW-2, RW-5, RW-6

DEFINITIONS

NE = Not established

NA = Not analyzed

Bold and highlighted values represent values above the applicable standards

STANDARDS

WQCC 20 NMAC 6.2.3103 - Standards for Ground Water of 10,000 mg/l TDS Concentration or Less.

a) Human Health Standards; b) Other Standards for Domestic Water

40 CFR 141.62 Detection Limits for Inorganic Contaminants

EPA Regional Screening Level (RSL) Summary Table

NMED Risk Assessment Guidance for Investigations and Remediations Table A-1

NOTES

1) Additon of WQCC Metals per NMED's Comment 12 from "Approval with Modifications Annual Ground Water Monitoring Report, Rev 1, dated 12/12/12", to monitor upgradient wells.

8.13.3 OW-13, OW-14, OW-29, OW-30

DEFINITIONS

NE = Not established

NA = Not analyzed

Bold and highlighted values represent values above the applicable standards

STANDARDS

WQCC 20 NMAC 6.2.3103 - Standards for Ground Water of 10,000 mg/l TDS Concentration or Less.

a) Human Health Standards; b) Other Standards for Domestic Water

40 CFR 141.62 Detection Limits for Inorganic Contaminants

EPA Regional Screening Level (RSL) Summary Table

NMED Risk Assessment Guidance for Investigations and Remediations Table A-1

NOTES

1) Additon of WQCC Metals per NMED's Comment 12 from "Approval with Modifications Annual Ground Water Monitoring Report, Rev 1, dated 12/12/12", to monitor upgradient wells.

8.13.4 OW-13, OW-14, OW-29, OW-30

DEFINITIONS

NE = Not established

NA = Not analyzed

Bold and highlighted values represent values above the applicable standards

STANDARDS

WQCC 20 NMAC 6.2.3103 - Standards for Ground Water of 10,000 mg/l TDS Concentration or Less.

a) Human Health Standards; b) Other Standards for Domestic Water

40 CFR 141.62 Detection Limits for Inorganic Contaminants

EPA Regional Screening Level (RSL) Summary Table

NMED Risk Assessment Guidance for Investigations and Remediations Table A-1

NOTES

8.16.2 STP-1 TO EP-2 (EP-2 INLET)

Volatile Organic Compound Analytical Result Summary

STANDARDS			Parameters		
			Acetone (mg/L)	2-Butanone (mg/L)	Carbon Disulfide (mg/L)
WQCC 20NMAC 6.2.3103			NE	NE	NE
40 CFR 141.62 MCL			NE	NE	NE
NMED Tap Water (JUL 2015)			**14.1**	**5.56**	**0.81**
EPA RSL for Tap Water (MAY 2016)			14	5.6	0.81
SAMPLE ID	**DATE SAMPLED**	**METHOD**			
STP-1 TO EP-2	11/17/2016	8260B	2.4	0.076	0.013
	8/30/2016	8260B/8270C	1.1	<0.1	<0.1
	6/8/2016 [1]	8260B	0.87	0.024	0.039
	8/24/2015	8260B	0.25	<0.02	<0.02
	9/10/2014	8260B/8270C	1.3	0.16	0.058
	9/5/2013	8260B	2.2	0.26	<0.1
	8/21/2012 [1]	8260B	<0.01	<0.01	<0.01
	10/31/2011	8260B	0.86	0.14	<0.05
	7/21/2010	8260B	0.49	<0.05	<0.05

DEFINITIONS
NE = Not established
NA = Not analyzed
Bold and highlighted values represent values above the applicable standards

STANDARDS
WQCC 20 NMAC 6.2.3103 - Standards for
a) Human Health Standards; b) Other Standards for Domestic Water
40 CFR 141.62 Detection Limits for Inorganic Contaminants
EPA Regional Screening Level (RSL) Summary Table
NMED Risk Assessment Guidance for Investigations and Remediations Table A-1

NOTES
1) Sample taken from inlet from STP-1. No flow to aeration lagoons - diverted to Waste Water Treatment Plant.

8.16.3 STP-1 TO EP-2 (EP-2 INLET)
TOTAL METALS ANALYSIS

STANDARDS			Parameters

DEFINITIONS
NE = Not established
NA = Not analyzed
Bold and highlighted values represent values above the applicable standards

STANDARDS
WQCC 20 NMAC 6.2.3103 - Standards for Ground Water of 10,000 mg/l TDS Concentration or Less.
a) Human Health Standards; b) Other Standards for Domestic Water
40 CFR 141.62 Detection Limits for Inorganic Contaminants
EPA Regional Screening Level (RSL) Summary Table
NMED Risk Assessment Guidance for Investigations and Remediations Table A-1

NOTES
1) No samples collected for General Chemistry - not enough water.

DEFINITIONS

NE = Not established

NA = Not analyzed

Bold and highlighted values represent values above the applicable standards

STANDARDS

WQCC 20 NMAC 6.2.3103 - Standards for Ground Water of 10,000 mg/l TDS Concentration or Less.

a) Human Health Standards; b) Other Standards for Domestic Water

40 CFR 141.62 Detection Limits for Inorganic Contaminants

EPA Regional Screening Level (RSL) Summary Table

NMED Risk Assessment Guidance for Investigations and Remediations Table A-1

DEFINITIONS
NE = Not established
NA = Not analyzed
Bold and highlighted values represent values above the applicable standards

STANDARDS
WQCC 20 NMAC 6.2.3103 - Standards for Ground Water of 10,000 mg/l TDS Concentration or Less.
a) Human Health Standards; b) Other Standards for Domestic Water
40 CFR 141.62 Detection Limits for Inorganic Contaminants
EPA Regional Screening Level (RSL) Summary Table
NMED Risk Assessment Guidance for Investigations and Remediations Table A-1

NOTES
2) 2009 Method 6010B Total Recoverable Metals Analysis run
3) Water level too shallow to collect samples.
4) Was not sampled in September due to low recharge rate.
5) Quarterly combined with 2013 Annual sampling event.

DEFINITIONS
NE = Not established
NA = Not analyzed
Bold and highlighted values represent values above the applicable standards

STANDARDS
WQCC 20 NMAC 6.2.3103 - Standards for Ground Water of 10,000 mg/l TDS Concentration or Less.
a) Human Health Standards; b) Other Standards for Domestic Water
40 CFR 141.62 Detection Limits for Inorganic Contaminants
EPA Regional Screening Level (RSL) Summary Table
NMED Risk Assessment Guidance for Investigations and Remediations Table A-1

NOTES

SECTION 9

WELL DATA DTW/ DTB MEASUREMENTS

The 2016 Well Data DTB/DTW Measurements has been updated with survey information submitted to and approved by NMED per notification received “Approval with Modifications, Requirement to Resurvey Groundwater Monitoring Wells and Recovery Wells issued on September 26, 2012. Western was required to resurvey the monitoring wells due to discrepancies found in applicable standards ground level elevation, well casing elevation, well casing bottom elevation and stick up lengths. All monitoring wells were surveyed by a licensed professional surveyor, DePauli Engineering on June 7, 2011, April 2014, September 2014, December 2014, and January 2016. The Well Data Table is attached as Section 9.1.

The additional wells from the hydrocarbon seep (MKTF series) and the two new wells STP1-NW and STP1-SW were surveyed by Hammon Enterprises Inc., professional surveyor on September 15, 2014, December 16, 2014 and on December 16, 2014.

DEFINITIONS:

DTB - Depth to Bottom
DTW - Depth to Water
SPH = Separate Phase Hydrocarbons
* Wells also checked for Artesian flow conditions.
N/A = Not Available
Negative number in Stick up Length column indicates well is flushmount and located at or below ground level.
Depth to Water Column - if 0.00 is indicated - means water is at top of casing (full) under artesian flow conditions.
Dry indicates no water was detected.

NOTES:

1. *Elevation data from NMED's "Approval with Modifications, Requirement to Resurvey Ground water Monitoring Wells and Recovery Wells", dated 9/26/12.*
2. *Ground water elevation - Depth to SPH = SPH Column Thickness.*
3. *2011 Survey Well Casing Rim elevation - depth to water measurement.*
4. *Corrected Water Table Elevation applies only if SPH thickness column measurement exists. (0.8 X SPH thickness + Ground Water Elevation)*
5. *Casings extended due to increased height from berm work. Changes in ground elevation, casing rim elevations, and well bottom casing elevations. Resurveyed on 9/15/2014 by HEI (Hammon Enterprises Inc.).*
6. *Napis-2, Napis-3, KA-3 - flush mount casings extended to prevent water from entering inside the vault on August 8, 2016.*

DEFINITIONS:

DTB - Depth to Bottom
DTW - Depth to Water
N/A - Not Applicable
SPH - Separate Phase Hydrocarbons

Negative number in Stick up Length column indicates well is flush mount and located at or below ground level
Depth to Water Column - if a measurement of 0.00 is indicated - means water level is at top of casing - Full.
Dry indicates no water was detected in the well.

NOTES:

1) Wells surveyed by a licensed professional surveyor-Hammon Enterprises, Inc. (HEI)
2) "0" indicates no SPH level.
3) Depth to SPH - Depth to Water Measurement = SPH Column Thickness.
4) Corrected Water Table Elevaton applies only if SPH thickness column measurement exists. (0.8 X SPH thickness + Ground Water Elevation)

SECTION 10

2016 MONITORING SCHEDULE

Table 1 in Section 10 details the approved Ground Water Monitoring Schedule for all wells at Gallup Refinery and details the analytical suite required for each sample site location.

SECTION 10 – MONITORING SCHEDULE 2016

Sampling Location ID	Frequency	General Monitoring and Sampling Comments.	Analytical Data Location
NAPI Secondary Containment (LDU) East, West, Oil Sump	Q - Quarterly	BTEX, DRO extended/GRO, WQCC Metals or check for fluids	Appendix G, Section 8.10
RW-1	Q	Measure depth to water (DTW), depth to product (DTP), BTEX + MTBE, GRO/DRO/MRO. Sample only if no SPH is detected.	Appendix G, Section 8.11
RW-2	Q	Same as RW-1	Appendix G, Section 8.11
RW-5	Q	Same as RW-1	Appendix G, Section 8.11
RW-6	Q	Same as RW-1	Appendix G, Section 8.11
OW-1 [1]	Q	Visual Check for Artesian flow conditions; Major Cations/Anions, VOCs, GRO/DRO/MRO, WQCC Metals, add Method 8011 for 1,2-Dibromethane(EDB), & ethylene dichloride (EDC)	Appendix G, Section 8.12
OW-10 [1]	Q	Visual Check for Artesian flow conditions; Major Cations/Anions, VOCs, GRO/DRO extended, WQCC Metals, add Method 8011 for EDB & EDC	Appendix G, Section 8.12
OW-13	Q	VOCs, WQCC Metals, GRO/DRO extended	Appendix G, Section 8.13
OW-14 [1]	Q	Same as OW-13, add Method 8011 for 1,2-Dibromethane	Appendix G, Section 8.13
OW-29 [1]	Q	Same as OW-13, add Method 8011 for 1,2-Dibromethane	Appendix G, Section 8.13
OW-30 [1]	Q	Same as OW-13, add Method 8011 for 1,2-Dibromethane	Appendix G, Section 8.13
GWM-1	Q	VOCs, WQCC METALS, GRO/DRO EXTENDED, Major Cations/Anions	Appendix G, Section 8.7
GWM-2	Q	Check for water. If water is detected report to OCD & NMED within 24 hours. Sample for VOCs, GRO/DRO extended, Major Cations/Anions	Appendix G, Section 8.7
GWM-3	Q	Same as GWM-2	Appendix G, Section 8.7
NAPIS-1	Q	Major Cations/Anions, VOCs, SVOC, GRO/DRO extended, WQCC Metals	Appendix G, Section 8.8
NAPIS-2	Q	Same as NAPIS-1	Appendix G, Section 8.8
NAPIS-3	Q	Same as NAPIS-1	Appendix G, Section 8.8
KA-3	Q	Same as NAPIS-1	Appendix G, Section 8.8
OAPIS-1	Q	VOCs, SVOCs, GRO/DRO extended, WQCC Metals, Major Cations/Anions, Cyanide	Appendix G, Section 8.9
STP1-NW	Q	VOCs, SVOCs, GRO/DRO extended, WQCC Metals, Major Cations/Anions	Appendix G, Section 8.16
STP1-SW	Q	Same as STP1-NW	Appendix G, Section 8.16
MKTF-1	Q	VOCs, SVOCs, GRO/DRO extended, WQCC Metals, Major Cations/Anions. Ground Water samples will not be collected if SPH is present in any of the wells.	Appendix G, Section 8.17
MKTF-2 [2]	Q	Same as MKTF-1, add Method 8011 for 1,2-Dibromethane	Appendix G, Section 8.17

(Revised: Oct 2020)

SECTION 10 – MONITORING SCHEDULE 2016

Sampling Location ID	Frequency	General Monitoring and Sampling Comments.	Analytical Data Location
MKTF-3	Q	Same as MKTF-1	Appendix G, Section 8.17
MKTF-4	Q	Same as MKTF-1	Appendix G, Section 8.17

MKTF-41 [2]	Q	Same as MKTF-1, add Method 8011 for 1,2-Dibromethane	Appendix G, Section 8.17
MKTF-42	Q	Same as MKTF-1	Appendix G, Section 8.17
MKTF-43	Q	Same as MKTF-1	Appendix G, Section 8.17
MKTF-44	Q	Same as MKTF-1	Appendix G, Section 8.17
MKTF-45 Pond 1 (EP-1)	Q	Same as MKTF-1 NO LONGER IN SERVICE	Appendix G, Section 8.17 Appendix G, Section 8.15
Evaporation Pond (EP-2 through EP-12B)	SA	General Chemistry, VOCs, SVOCs, BOD, COD, E-Coli Bacteria, WQCC Metals	Appendix G, Section 8.15
BW-1A	A - Annual	Major Cations/Anions, VOCs, WQCC Metals, GRO/DRO extended	Appendix G, Section 8.1
BW-1B	A	Same as BW-1A	Appendix G, Section 8.1
BW-1C	A	Same as BW-1A	Appendix G, Section 8.1

SECTION 10 – MONITORING SCHEDULE 2016

Sampling Location ID	Frequency	General Monitoring and Sampling Comments.	Analytical Data Location
BW-2A	A	Same as BW-1A	Appendix G, Section 8.1
BW-2B	A	Same as BW-1A	Appendix G, Section 8.1
BW-2C	A	Same as BW-1A	Appendix G, Section 8.1
BW-3A	A	Same as BW-1A	Appendix G, Section 8.1
BW-3B	A	Same as BW-1A	Appendix G, Section 8.1
BW-3C	A	Same as BW-1A	Appendix G, Section 8.1
STP-1 to EP-2 (EP-2 Inlet)	Q	VOCs, GRO/DRO extended, BOD, COD, TDS	Appendix G, Section 8.14
MW-1	Annual and every 10 years beginning 2009 per RCRA Post Closure Permit	Major Cations/Anions, VOCs, SVOCs, GRO/DRO extended, WQCC Metals, Cyanide. For RCRA 10 year requirements: Gen Chem, Modified Skinner List Metals (total and dissolved) including mercury and cyanide, Modified Skinner List VOCs, SVOCs, TPH	Appendix G, Section 8.2
MW-2	Annual and every 10 years beginning 2009 per RCRA Post Closure Permit	Same as MW-1	Appendix G, Section 8.2
MW-4	Annual and every 10 years beginning 2009 per RCRA Post Closure Permit	Same as MW-1	Appendix G, Section 8.2
MW-5	Annual and every 10 years beginning 2009 per RCRA Post Closure Permit	Same as MW-1	Appendix G, Section 8.2
OW-11	A	Major Cations/Anions, VOCs, WQCC Metals, GRO/DRO extended	Appendix G, Section 8.4
OW-12	A	VOCs, WQCC Metals, GRO/DRO extended, General Chemistry	Appendix G, Section 8.4
OW-50	Q	VOCs, WQCC Metals, GRO/DRO extended, General Chemistry, EDB	Appendix G, Section 8.5
OW-52	Q	Same as OW-50	Appendix G, Section 8.5
SMW-2	A	Major Cations/Anions, VOCs, SVOCs, GRO/DRO extended, WQCC Metals, Cyanide.	Appendix G, Section 8.3
SMW-4	Annual and every 10 years beginning 2009 per RCRA Post Closure Permit	Major Cations/Anions, VOCs,SVOCs, GRO/DRO extended, WQCC Metals, Cyanide. For RCRA 10 year requirements: Gen Chem, Modified Skinner List Metals (total and dissolved) including mercury and cyanide, Modified Skinner List VOCs, SVOCs, TPH	Appendix G, Section 8.3
PW-2	Every 3 years. Start 2008	VOCs, SVOCs, WQCC Metals, Cyanide, Nitrates	Appendix G, Section 8.6
PW-3	A	Same as PW-2	Appendix G, Section 8.6
PW-4	SA	Same as PW-2	Appendix G, Section 8.6

(Revised: Oct 2020)

SECTION 10 – MONITORING SCHEDULE 2016

DEFINITIONS:

NA – Not Applicable	SVOCs – Semi-Volatile Organic Compounds including phenols – Method 8270	DTW = Depth to Water; DTP = Depth to Product
DO – Dissolved Oxygen	BTEX – Benzene, toluene, ethylbenzene, Xylenes plus MTBE – Method 8021	EP = Evaporation Ponds; BW = Boundary Well; RW = Recovery Well
ORP – Reduction Potential	DRO/GRO extended – Diesel Range Organics, Gasoline Range Organics, Motor Oil Range Organics – Method 8015D (or as modified)	MW = Monitor Well; OW – Observation Well; PW = Raw Water Production
Temp – Temperature	SVOCs – Semi-Volatile Organic Compounds including phenols – Method 8270	STP-1 to EP-2 – samples collected at inlet to EP-2
EC – Electrical or Specific Conductivity	General Chemistry – pH, specific conductance, cations, anions	NAPIS-1= (KA-1R); NAPIS-2 = (KA-2R); NAPIS-3 = (KA-3R)
TDS – Total Dissolved Solids	Method 8011 – 1,2-Dibromethane	MKTF = observation wells for investigation of hydrocarbon seep
VOCs – Volatile Organic Compounds + MTBE – Method 8260	WQCC Metals – include RCRA 8 metals – analyze as totals and dissolved	

NOTES:

1) Addition of Method 8011 – NMED directive 5/18/16 for any wells in which EDC is detected.
2) Addition of Method 8011 – NMED directive 4/16/16

NOTES:

FT - Feet *NR - Not recorded*

Gal - Gallon *YTD -Year to date*

1) Bladder pump has torn diaphragm. Pump non-repairable. Ordered new pump

2) Measurements given are estimated values based on the technicians interpretation and should not be viewed as accurate.

3) Annual Samples collected - no purging done at this time.

RW-6 HYDROCARBON RECOVERY LOG - Continued

Measurement Date	Time	Quarter	Method	Status	Depth to Product (ft)	Depth to Water (ft)	Product Thickness Level [1] (ft)	Product Bailed/Purged [1] (gal)	Water Purged [1] (gal)
					YTD TOTALS		**16.25**	**34.99**	**609**

NOTES:

FT - Feet NR - Not recorded

Gal - Gallon YTD - Year to Date

1) Measurements given are estimated values based on the technicians interpretation.

2) Annual grab samples collected - no purging of well at this time.

APPENDIX A
ESTIMATED YEAR TO DATE SUMMARY 1995 THRU 2016

RW-1

Year	Product Thickness Level [1] (ft)	Product Bailed/Purged [1] (gal)	Water Purged [1] (gal)
2005	25.9	431.5	1210.5

(3)	1248	6.68	15.54	71667	46.583	49.190	47.7	-8.3
(4)	1250	6.63	15.67	71776	46.654	19.280	42.4	-4.5

WEATHER CONDITIONS

Clear, calm 55-60 deg F

WATER APPEARANCE

Clear, no odor - slight brownish tint at end of purge.

SAMPLE LOG

Water level full (to top of casing). Pump lost suction at 65 gallons - stopped at 9am. Allowed to recharge - restarted with purge at 950 - lost suction again after 20 gallons, shut down pump and allowed to recharge. Came back at 1300 hours to collect sample. Purged water collected in 55 gallon drums and disposed of upstream of the WWT plant.

APPENDIX C

APPLICABLE STANDARDS

20.6.2.2101 GENERAL REQUIREMENTS:

A. Except as otherwise provided in Sections 20.6.2.2000 through 20.6.2.2201 NMAC, no person shall cause or allow effluent to discharge to a watercourse if the effluent as indicated by:

(1) any two consecutive daily composite samples;

(2) more than one daily composite sample in any thirty-day period (in which less than ten (10) daily composite samples are examined);

(3) more than ten percent (10%) of the daily composite samples in any thirty-day period (in which ten (10) or more daily composite samples are examined); or

(4) a grab sample collected during flow from an intermittent or infrequent discharge does not conform to the following:

(a)	Bio-chemical Oxygen Demand (BOD)—Less than 30 mg/l	
(b)	Chemical Oxygen Demand (COD)	Less than 125 mg/l
(c)	Settleable Solids	Less than 0.5 mg/l
(d)	Fecal Coliform Bacteria	Less than 500 organisms per 100 ml
(e)	pH	Between 6.6 and 8.6

B. Upon application, the secretary may eliminate the pH requirement for any effluent source that the secretary determines does not unreasonably degrade the water into which the effluent is discharged.

C. Subsection A of this Section does not apply to the weight of constituents in the water diverted.

D. Samples shall be examined in accordance with the most current edition of Standard Methods for the Examination of Water and Wastewater published by the American Public Health Association or the most current edition of Methods for Chemical Analysis of Water and Wastes published by the Environmental Protection Agency, where applicable.

[4-20-68, 3-14-71, 10-8-71, 8-13-76, 2-20-81, 12-1-95; 20.6.2.2101 NMAC - Rn, 20 NMAC 6.2.II.2101, 1-15-01]

20.6.2.2102 RIO GRANDE BASIN--COMMUNITY SEWERAGE SYSTEMS:

A. No person shall cause or allow effluent from a community sewerage system to discharge to a watercourse in the Rio Grande Basin between the headwaters of Elephant Butte Reservoir and Angostura Diversion Dam as described in Subsection E of this Section if the effluent, as indicated by:

(1) any two consecutive daily composite samples;

(2) more than one daily composite sample in any thirty-day period (in which less than ten (10) daily composite samples are examined);

(3) more than ten percent (10%) of the daily composite samples in any thirty-day period (in which ten (10) or more daily composite samples are examined); or

(4) a grab sample collected during flow from an intermittent or infrequent discharge does not conform to the following:

(a)	Bio-chemical Oxygen Demand (BOD)	Less than 30 mg/l
(b)	Chemical Oxygen Demand (COD)	Less than 80 mg/l
(c)	Settleable Solids	Less than 0.1 mg/l
(d)	Fecal Coliform Bacteria	Less than 500 organisms per 100 ml
(e)	pH	Between 6.6 and 8.6

B. Upon application, the secretary may eliminate the pH requirement for any effluent source that the secretary determines does not unreasonably degrade the water into which the effluent is discharged.

C. Subsection A of this Section does not apply to the weight of constituents in the water diverted.

D. Samples shall be examined in accordance with the most current edition of Standard Methods for the Analysis of Water and Wastewater published by the American Public Health Association or the most current edition of Methods for Chemical Analysis of Water and Wastes published by the Environmental Protection Agency, where applicable.

E. The following is a description of the Rio Grande Basin from the headwaters of Elephant Butte Reservoir to Angostura Diversion Dam as used in this Section. Begin at San Marcial USGS gauging station, which is the headwaters of Elephant Butte Reservoir Irrigation Project, thence northwest to U.S. Highway 60, nine miles + west of Magdalena; thence west along the northeast edge of the San Agustin Plains closed basin; thence north along the east side of the north plains closed basin to the Continental Divide; thence northly along the Continental Divide to the community of Regina on State Highway 96; thence southeasterly along the crest of the San Pedro Mountains to Cerro Toledo Peak; thence southwesterly along the Sierra de Los Valles ridge and the Borrego Mesa to Bodega Butte; thence southerly to Angostura Diversion Dam which is the upper reach of the Rio Grande in this basin; thence southeast to the crest and the crest of the Manzano Mountains and the Los Pinos Mountains; thence southerly along the divide that contributes to the Rio Grande to San Marcial gauging station to the point and place of beginning; excluding all waters upstream of Jemez Pueblo which flow into the Jemez River drainage and the Bluewater Lake. Counties included in the basin are:

(1) north portion of Socorro County;

(2) northeast corner of Catron County;

(3) east portion of Valencia County;

(4) west portion of Bernalillo County;

(5) east portion of McKinley County; and

(6) most of Sandoval County.

20.6.2.2200 WATERCOURSE PROTECTION:
[12-1-95; 20.6.2.2200 NMAC - Rn, 20 NMAC 6.2.II.2200, 1-15-01]

20.6.2.2201 DISPOSAL OF REFUSE: No person shall dispose of any refuse in a natural watercourse or in a location and manner where there is a reasonable probability that the refuse will be moved into a natural watercourse by leaching or otherwise. Solids diverted from the stream and returned thereto are not subject to abatement under this Section.
[4-20-68, 9-3-72; 20.6.2.2201 NMAC - Rn, 20 NMAC 6.2.II.2201, 1-15-01]

20.6.2.2202 - 20.6.2.2999: [RESERVED]
[12-1-95; 20.6.2.2202 - 20.6.2.2999 NMAC - Rn, 20 NMAC 6.2.II.2202-3100, 1-15-01]

20.6.2.3000 PERMITTING AND GROUND WATER STANDARDS:
[12-1-95; 20.6.2.3000 NMAC - Rn, 20 NMAC 6.2.III, 1-15-01]

20.6.2.3001 - 20.6.2.3100: [RESERVED]
[12-1-95; 20.6.2.3001 - 20.6.2.3100 NMAC - Rn, 20 NMAC 6.2.II.2202-3100, 1-15-01]

20.6.2.3101 PURPOSE:

A. The purpose of Sections 20.6.2.3000 through 20.6.2.3114 NMAC controlling discharges onto or below the surface of the ground is to protect all ground water of the state of New Mexico which has an existing concentration of 10,000 mg/l or less TDS, for present and potential future use as domestic and agricultural water supply, and to protect those segments of surface waters which are gaining because of ground water inflow, for uses designated in the New Mexico Water Quality Standards. Sections 20.6.2.3000 through 20.6.2.3114 NMAC are written so that in general:

(1) if the existing concentration of any water contaminant in ground water is in conformance with the standard of 20.6.2.3103 NMAC, degradation of the ground water up to the limit of the standard will be allowed; and

(2) if the existing concentration of any water contaminant in ground water exceeds the standard of Section 20.6.2.3103 NMAC, no degradation of the ground water beyond the existing concentration will be allowed.

B. Ground water standards are numbers that represent the pH range and maximum concentrations of water contaminants in the ground water which still allow for the present and future use of ground water resources.

C. The standards are not intended as maximum ranges and concentrations for use, and nothing herein contained shall be construed as limiting the use of waters containing higher ranges and concentrations.
[2-18-77; 20.6.2.3101 NMAC - Rn, 20 NMAC 6.2.III.3101, 1-15-01]

20.6.2.3102: [RESERVED]
[12-1-95; 20.6.2.3102 NMAC - Rn, 20 NMAC 6.2.III.3102, 1-15-01]

20.6.2.3103 STANDARDS FOR GROUND WATER OF 10,000 mg/l TDS CONCENTRATION OR LESS: The following standards are the allowable pH range and the maximum allowable concentration in ground water for the contaminants specified unless the existing condition exceeds the standard or unless otherwise provided in Subsection D of Section 20.6.2.3109 NMAC. Regardless of whether there is one contaminant or more than one contaminant present in ground water, when an existing pH or concentration of any water contaminant exceeds the standard specified in Subsection A, B, or C of this section, the existing pH or concentration shall be the allowable limit, provided that the discharge at such concentrations will not result in concentrations at any place of withdrawal for present or reasonably foreseeable future use in excess of the standards of this section. These standards shall apply to the dissolved portion of the contaminants specified with a definition of dissolved being that given in the publication "*methods for chemical analysis of water and waste of the U.S. environmental protection agency*," with the exception that standards for mercury, organic compounds and non-aqueous phase liquids shall apply to the total unfiltered concentrations of the contaminants.

A. Human Health Standards-Ground water shall meet the standards of Subsection A and B of this section unless otherwise provided. If more than one water contaminant affecting human health is present, the toxic pollutant criteria as set forth in the definition of toxic pollutant in Section 20.6.2.1101 NMAC for the combination of contaminants, or the Human Health Standard of Subsection A of Section 20.6.2.3103 NMAC for each contaminant shall apply, whichever is more stringent. Non-aqueous phase liquid shall not be present floating atop of or immersed within ground water, as can be reasonably measured.

[Note: For purposes of application of the amended numeric uranium standard to past and current water discharges (as of 9-26-04), the new standard will not become effective until June 1, 2007. For any new water discharges, the uranium standard is effective 9-26-04.]

20.6.2.3104 DISCHARGE PERMIT REQUIRED: Unless otherwise provided by this Part, no person shall cause or allow effluent or leachate to discharge so that it may move directly or indirectly into ground water unless he is discharging pursuant to a discharge permit issued by the secretary. When a permit has been issued, discharges must be consistent with the terms and conditions of the permit. In the event of a transfer of the ownership, control, or possession of a facility for which a discharge permit is in effect, the transferee shall have authority to discharge under such permit, provided that the transferee has complied with Section 20.6.2.3111 NMAC, regarding transfers.
[2-18-77, 12-24-87, 12-1-95; Rn & A, 20.6.2.3104 NMAC - 20 NMAC 6.2.III.3104, 1-15-01; A, 12-1-01]

20.6.2.3105 EXEMPTIONS FROM DISCHARGE PERMIT REQUIREMENT: Sections 20.6.2.3104 and 20.6.2.3106 NMAC do not apply to the following:

A. Effluent or leachate which conforms to all the listed numerical standards of Section 20.6.2.3103 NMAC and has a total nitrogen concentration of 10 mg/l or less, and does not contain any toxic pollutant. To determine conformance, samples may be taken by the agency before the effluent or leachate is discharged so that it may move directly or indirectly into ground water; provided that if the discharge is by seepage through non-natural or altered natural materials, the agency may take samples of the solution before or after seepage. If for any reason the agency does not have access to obtain the appropriate samples, this exemption shall not apply;

B. Effluent which is regulated pursuant to 20.7.3 NMAC, "Liquid Waste Disposal and Treatment" regulations;

C. Water used for irrigated agriculture, for watering of lawns, trees, gardens or shrubs, or for irrigation for a period not to exceed five years for the revegetation of any disturbed land area, unless that water is received directly from any sewerage system;

§ 141.60 Effective dates.

(a) The effective dates for § 141.61 are as follows:

(1) The effective date for paragraphs (a)(1) through (a)(8) of § 141.61 is January 9, 1989.

(2) The effective date for paragraphs (a)(9) through (a)(18) and (c)(1) through (c)(18) of § 141.61 is July 30, 1992.

(3) The effective date for paragraphs (a)(19) through (a)(21), (c)(19) through (c)(25), and (c)(27) through (c)(33) of § 141.61 is January 17, 1994. The effective date of § 141.61(c)(26) is August 17, 1992.

(b) The effective dates for § 141.62 are as follows:

(1) The effective date of paragraph (b)(1) of § 141.62 is October 2, 1987.

(2) The effective date for paragraphs (b)(2) and (b)(4) through (b)(10) of § 141.62 is July 30, 1992.

(3) The effective date for paragraphs (b)(11) through (b)(15) of § 141.62 is January 17, 1994.

(4) The effective date for § 141.62(b)(16) is January 23, 2006.

[56 FR 3593, Jan. 30, 1991, as amended at 57 FR 31846, July 17, 1992; 59 FR 34324, July 1, 1994; 66FR 7063, Jan. 22, 2001]

§ 141.61 Maximum contaminant levels for organic contaminants.

(a) The following maximum contaminant levels for organic contaminants apply to community and non-transient, non-community water systems.

CAS No.	Contaminant	MCL (mg/l)
(1) 75–01–4	Vinyl chloride	0.002
(2) 71–43–2	Benzene	0.005
(3) 56–23–5	Carbon tetrachloride	0.005
(4) 107–06–2	1,2-Dichloroethane	0.005
(5) 79–01–6	Trichloroethylene	0.005
(6) 106–46–7	para-Dichlorobenzene	0.075
(7) 75–35–4	1,1-Dichloroethylene	0.007
(8) 71–55–6	1,1,1-Trichloroethane	0.2
(9) 156–59–2	cis-1,2-Dichloroethylene	0.07
(10) 78–87–5	1,2-Dichloropropane	0.005
(11) 100–41–4	Ethylbenzene	0.7
(12) 108–90–7	Monochlorobenzene	0.1
(13) 95–50–1	o-Dichlorobenzene	0.6
(14) 100–42–5	Styrene	0.1
(15) 127–18–4	Tetrachloroethylene	0.005
(16) 108–88–3	Toluene	1
(17) 156–60–5	trans-1,2-Dichloroethylene	0.1
(18) 1330–20–7	Xylenes (total)	10
(19) 75–09–2	Dichloromethane	0.005
(20) 120–82–1	1,2,4-Trichloro- benzene	.07
(21) 79–00–5	1,1,2-Trichloro- ethane	.005

(b) The Administrator, pursuant to section 1412 of the Act, hereby identifies as indicated in the Table below granular activated carbon (GAC), packed tower aeration (PTA), or oxidation (OX) as the best technology treatment technique, or other means available for achieving compliance with the maximum contaminant level for organic contaminants identified in paragraphs (a) and (c) of this section:

BAT FOR ORGANIC CONTAMINANTS LISTED IN § 141.61 (a) AND (c)

CAS No.	Contaminant	GAC	PTA	OX
15972–60–8	Alachlor	X		
116–06–3	Aldicarb	X		
1646–88–4	Aldicarb sulfone	X		
1646–87–3	Aldicarb sulfoxide	X		
1912–24–9	Atrazine	X		
71–43–2	Benzene	X	X	
50–32–8	Benzo[a]pyrene	X		

BAT FOR ORGANIC CONTAMINANTS LISTED IN § 141.61 (a) AND (c)—Continued

CAS No.	Contaminant	GAC	PTA	OX
1563–66–2	Carbofuran	X		
56–23–5	Carbon tetrachloride	X	X	
57–74–9	Chlordane	X		
75–99–0	Dalapon	X		
94–75–7	2,4-D	X		
103–23–1	Di (2-ethylhexyl) adipate	X	X	
117–81–7	Di (2-ethylhexyl) phthalate	X		
96–12–8	Dibromochloropropane (DBCP)	X	X	
95–50–1	o-Dichlorobenzene	X	X	
106–46–7	para-Dichlorobenzene	X	X	
107–06–2	1,2-Dichloroethane	X	X	
75–35–4	1,1-Dichloroethylene	X	X	
156–59–2	cis-1,2-Dichloroethylene	X	X	
156–60–5	trans-1,2-Dichloroethylene	X	X	
75–09–2	Dichloromethane		X	
78–87–5	1,2-Dichloropropane	X	X	
88–85–7	Dinoseb	X		
85–00–7	Diquat	X		
145–73–3	Endothall	X		
72–20–8	Endrin	X		
100–41–4	Ethylbenzene	X	X	
106–93–4	Ethylene Dibromide (EDB)	X	X	
1071–83–6	Gylphosate			X
76–44–8	Heptachlor	X		
1024–57–3	Heptachlor epoxide	X		
118–74–1	Hexachlorobenzene	X		
77–47–3	Hexachlorocyclopentadiene	X	X	
58–89–9	Lindane	X		
72–43–5	Methoxychlor	X		
108–90–7	Monochlorobenzene	X	X	
23135–22–0	Oxamyl (Vydate)	X		
87–86–5	Pentachlorophenol	X		
1918–02–1	Picloram	X		
1336–36–3	Polychlorinated biphenyls (PCB)	X		
122–34–9	Simazine	X		
100–42–5	Styrene	X	X	
1746–01–6	2,3,7,8-TCDD (Dioxin)	X		
127–18–4	Tetrachloroethylene	X	X	
108–88–3	Toluene	X	X	
8001–35–2	Toxaphene	X		
93–72–1	2,4,5-TP (Silvex)	X		
120–82–1	1,2,4-Trichlorobenzene	X	X	
71–55–6	1,1,1-Trichloroethane	X	X	
79–00–5	1,1,2-Trichloroethane	X	X	
79–01–6	Trichloroethylene	X	X	
75–01–4	Vinyl chloride		X	
1330–20–7	Xylene	X	X	

(c) The following maximum contaminant levels for synthetic organic contaminants apply to community water systems and non-transient, non-community water systems:

CAS No.	Contaminant	MCL (mg/l)
(1) 15972–60–8	Alachlor	0.002
(2) 116–06–3	Aldicarb	0.003
(3) 1646–87–3	Aldicarb sulfoxide	0.004
(4) 1646–87–4	Aldicarb sulfone	0.002
(5) 1912–24–9	Atrazine	0.003
(6) 1563–66–2	Carbofuran	0.04
(7) 57–74–9	Chlordane	0.002
(8) 96–12–8	Dibromochloropropane	0.0002
(9) 94–75–7	2,4-D	0.07
(10) 106–93–4	Ethylene dibromide	0.00005
(11) 76–44–8	Heptachlor	0.0004
(12) 1024–57–3	Heptachlor epoxide	0.0002
(13) 58–89–9	Lindane	0.0002
(14) 72–43–5	Methoxychlor	0.04
(15) 1336–36–3	Polychlorinated biphenyls	0.0005

CAS No.	Contaminant	MCL (mg/l)
(16) 87–86–5	Pentachlorophenol	0.001
(17) 8001–35–2	Toxaphene	0.003
(18) 93–72–1	2,4,5-TP	0.05
(19) 50–32–8	Benzo[a]pyrene	0.0002
(20) 75–99–0	Dalapon	0.2
(21) 103–23–1	Di(2-ethylhexyl) adipate	0.4
(22) 117–81–7	Di(2-ethylhexyl) phthalate	0.006
(23) 88–85–7	Dinoseb	0.007
(24) 85–00–7	Diquat	0.02
(25) 145–73–3	Endothall	0.1
(26) 72–20–8	Endrin	0.002
(27) 1071–53–6	Glyphosate	0.7
(28) 118–74–1	Hexacholorbenzene	0.001
(29) 77–47–4	Hexachlorocyclopentadiene	0.05
(30) 23135–22–0	Oxamyl (Vydate)	0.2
(31) 1918–02–1	Picloram	0.5
(32) 122–34–9	Simazine	0.004
(33) 1746–01–6	2,3,7,8-TCDD (Dioxin)	3×10^{-8}

[56 FR 3593, Jan. 30, 1991, as amended at 56 FR 30280, July 1, 1991; 57 FR 31846, July 17, 1992; 59 FR 34324, July 1, 1994]

§ 141.62 Maximum contaminant levels for inorganic contaminants.

(a) [Reserved]

(b) The maximum contaminant levels for inorganic contaminants specified in paragraphs (b) (2)–(6), (b)(10), and (b) (11)–(16) of this section apply to community water systems and non-transient, non-community water systems. The maximum contaminant level specified in paragraph (b)(1) of this section only applies to community water systems. The maximum contaminant levels specified in (b)(7), (b)(8), and (b)(9) of this section apply to community water systems; non-transient, non-community water systems; and transient non-community water systems.

Contaminant	MCL (mg/l)
(1) Fluoride	4.0
(2) Asbestos	7 Million Fibers/liter (longer than 10 μm).
(3) Barium	2
(4) Cadmium	0.005
(5) Chromium	0.1
(6) Mercury	0.002
(7) Nitrate	10 (as Nitrogen)
(8) Nitrite	1 (as Nitrogen)
(9) Total Nitrate and Nitrite	10 (as Nitrogen)
(10) Selenium	0.05
(11) Antimony	0.006
(12) Beryllium	0.004
(13) Cyanide (as free Cyanide).	0.2
(14) [Reserved].	
(15) Thallium	0.002
(16) Arsenic	0.010

(c) The Administrator, pursuant to section 1412 of the Act, hereby identifies the following as the best technology, treatment technique, or other means available for achieving compliance with the maximum contaminant levels for inorganic contaminants identified in paragraph (b) of this section, except fluoride:

BAT FOR INORGANIC COMPOUNDS LISTED IN SECTION 141.62(b)

Chemical Name	BAT(s)
Antimony	2,7
Arsenic[4]	1, 2, 5, 6, 7, 9, 12[5]
Asbestos	2,3,8
Barium	5,6,7,9
Beryllium	1,2,5,6,7
Cadmium	2,5,6,7
Chromium	2,5,6[2],7
Cyanide	5,7,13
Mercury	2[1],4,6[1],7[1]
Nickel	5,6,7
Nitrate	5,7,9
Nitrite	5,7
Selenium	1,2[3],6,7,9
Thallium	1,5

[1] BAT only if influent Hg concentrations ≤10μg/1.
[2] BAT for Chromium III only.
[3] BAT for Selenium IV only.
[4] BATs for Arsenic V. Pre-oxidation may be required to convert Arsenic III to Arsenic V.
[5] To obtain high removals, iron to arsenic ratio must be at least 20:1.

Key to BATS in Table

1 = Activated Alumina
2 = Coagulation/Filtration (not BAT for systems < 500 service connections)
3 = Direct and Diatomite Filtration
4 = Granular Activated Carbon
5 = Ion Exchange
6 = Lime Softening (not BAT for systems <500 service connections)
7 = Reverse Osmosis

8 = Corrosion Control
9 = Electrodialysis
10 = Chlorine
11 = Ultraviolet
12 = Oxidation/Filtration
13 = Alkaline Chlorination (pH ≥8.5)

(d) The Administrator, pursuant to section 1412 of the Act, hereby identifies in the following table the affordable technology, treatment technique, or other means available to systems serving 10,000 persons or fewer for achieving compliance with the maximum contaminant level for arsenic:

SMALL SYSTEM COMPLIANCE TECHNOLOGIES (SSCTs) [1] FOR ARSENIC [2]

Small system compliance technology	Affordable for listed small system categories [3]
Activated Alumina (centralized).	All size categories.
Activated Alumina (Point-of-Use) [4].	All size categories.
Coagulation/Filtration [5]	501–3,300, 3,301–10,000.
Coagulation-assisted Microfiltration.	501–3,300, 3,301–10,000.
Electrodialysis reversal [6]	501–3,300, 3,301–10,000.
Enhanced coagulation/filtration.	All size categories
Enhanced lime softening (pH> 10.5).	All size categories.
Ion Exchange	All size categories.
Lime Softening [5]	501–3,300, 3,301–10,000.
Oxidation/Filtration [7]	All size categories.
Reverse Osmosis (centralized) [6].	501–3,300, 3,301–10,000.
Reverse Osmosis (Point-of-Use) [4].	All size categories.

[1] Section 1412(b)(4)(E)(ii) of SDWA specifies that SSCTs must be affordable and technically feasible for small systems.
[2] SSCTs for Arsenic V. Pre-oxidation may be required to convert Arsenic III to Arsenic V.
[3] The Act (ibid.) specifies three categories of small systems: (i) those serving 25 or more, but fewer than 501, (ii) those serving more than 500, but fewer than 3,301, and (iii) those serving more than 3,300, but fewer than 10,001.
[4] When POU or POE devices are used for compliance, programs to ensure proper long-term operation, maintenance, and monitoring must be provided by the water system to ensure adequate performance.
[5] Unlikely to be installed solely for arsenic removal. May require pH adjustment to optimal range if high removals are needed.
[6] Technologies reject a large volume of water—may not be appropriate for areas where water quantity may be an issue.
[7] To obtain high removals, iron to arsenic ratio must be at least 20:1.

[56 FR 3594, Jan. 30, 1991, as amended at 56 FR 30280, July 1, 1991; 57 FR 31847, July 17, 1992; 59 FR 34325, July 1, 1994; 60 FR 33932, June 29, 1995; 66 FR 7063, Jan. 22, 2001; 68 FR 14506, Mar. 25, 2003; 69 FR 38855, June 29, 2004]

§ 141.63 Maximum contaminant levels (MCLs) for microbiological contaminants.

(a) The MCL is based on the presence or absence of total coliforms in a sample, rather than coliform density.

(1) For a system which collects at least 40 samples per month, if no more than 5.0 percent of the samples collected during a month are total coliform-positive, the system is in compliance with the MCL for total coliforms.

(2) For a system which collects fewer than 40 samples/month, if no more than one sample collected during a month is total coliform-positive, the system is in compliance with the MCL for total coliforms.

(b) Any fecal coliform-positive repeat sample or *E. coli*-positive repeat sample, or any total coliform-positive repeat sample following a fecal coliform-positive or *E. coli*-positive routine sample constitutes a violation of the MCL for total coliforms. For purposes of the public notification requirements in subpart Q, this is a violation that may pose an acute risk to health.

(c) A public water system must determine compliance with the MCL for total coliforms in paragraphs (a) and (b) of this section for each month in which it is required to monitor for total coliforms.

(d) The Administrator, pursuant to section 1412 of the Act, hereby identifies the following as the best technology, treatment techniques, or other means available for achieving compliance with the maximum contaminant level for total coliforms in paragraphs (a) and (b) of this section:

(1) Protection of wells from contamination by coliforms by appropriate placement and construction;

(2) Maintenance of a disinfectant residual throughout the distribution system;

(3) Proper maintenance of the distribution system including appropriate pipe replacement and repair procedures, main flushing programs, proper operation and maintenance of storage tanks and reservoirs, and continual maintenance of positive water pressure in all parts of the distribution system;

(4) Filtration and/or disinfection of surface water, as described in subpart H, or disinfection of ground water using strong oxidants such as chlorine, chlorine dioxide, or ozone; and

(5) For systems using ground water, compliance with the requirements of

an EPA-approved State Wellhead Protection Program developed and implemented under section 1428 of the SDWA.

[54 FR 27566, June 29, 1989; 55 FR 25064, June 19, 1990, as amended at 65 FR 26022, May 4, 2000]

§ 141.64 Maximum contaminant levels for disinfection byproducts.

(a) *Bromate and chlorite.* The maximum contaminant levels (MCLs) for bromate and chlorite are as follows:

Disinfection byproduct	MCL (mg/L)
Bromate	0.010
Chlorite	1.0

(1) *Compliance dates for CWSs and NTNCWSs.* Subpart H systems serving 10,000 or more persons must comply with this paragraph (a) beginning January 1, 2002. Subpart H systems serving fewer than 10,000 persons and systems using only ground water not under the direct influence of surface water must comply with this paragraph (a) beginning January 1, 2004.

(2) The Administrator, pursuant to section 1412 of the Act, hereby identifies the following as the best technology, treatment techniques, or other means available for achieving compliance with the maximum contaminant levels for bromate and chlorite identified in this paragraph (a):

Disinfection byproduct	Best available technology
Bromate	Control of ozone treatment process to reduce production of bromate
Chlorite	Control of treatment processes to reduce disinfectant demand and control of disinfection treatment processes to reduce disinfectant levels

(b) TTHM and HAA5. (1) Subpart L—RAA compliance. (i) Compliance dates. Subpart H systems serving 10,000 or more persons must comply with this paragraph (b)(1) beginning January 1, 2002. Subpart H systems serving fewer than 10,000 persons and systems using only ground water not under the direct influence of surface water must comply with this paragraph (b)(1) beginning January 1, 2004. All systems must comply with these MCLs until the date specified for subpart V compliance in §141.620(c).

Disinfection byproduct	MCL (mg/L)
Total trihalomethanes (TTHM)	0.080
Haloacetic acids (five) (HAA5)	0.060

(ii) The Administrator, pursuant to section 1412 of the Act, hereby identifies the following as the best technology, treatment techniques, or other means available for achieving compliance with the maximum contaminant levels for TTHM and HAA5 identified in this paragraph (b)(1):

Disinfection byproduct	Best available technology
Total trihalomethanes (TTHM) and Haloacetic acids (five) (HAA5).	Enhanced coagulation or enhanced softening or GAC10, with chlorine as the primary and residual disinfectant

(2) Subpart V—LRAA compliance. (i) Compliance dates. The subpart V MCLs for TTHM and HAA5 must be complied with as a locational running annual average at each monitoring location beginning the date specified for subpart V compliance in §141.620(c).

Disinfection byproduct	MCL (mg/L)
Total trihalomethanes (TTHM)	0.080
Haloacetic acids (five) (HAA5)	0.060

(ii) The Administrator, pursuant to section 1412 of the Act, hereby identifies the following as the best technology, treatment techniques, or other means available for achieving compliance with the maximum contaminant levels for TTHM and HAA5 identified in this paragraph (b)(2) for all systems that disinfect their source water:

Disinfection byproduct	Best available technology
Total trihalomethanes (TTHM) and Haloacetic acids (five) (HAA5).	Enhanced coagulation or enhanced softening, plus GAC10; or nanofiltration with a molecular weight cutoff ≤1000 Daltons; or GAC20

(iii) The Administrator, pursuant to section 1412 of the Act, hereby identifies the following as the best technology, treatment techniques, or other means available for achieving compliance with the maximum contaminant levels for TTHM and HAA5 identified in this paragraph (b)(2) for consecutive systems and applies only to the disinfected water that consecutive systems buy or otherwise receive:

Disinfection byproduct	Best available technology
Total trihalomethanes (TTHM) and Haloacetic acids (five) (HAA5).	Systems serving ≥10,000: Improved distribution system and storage tank management to reduce residence time, plus the use of chloramines for disinfectant residual maintenance Systems serving <10,000: Improved distribution system and storage tank management to reduce residence time

[71 FR 478, Jan. 4, 2006]

§ 141.65 Maximum residual disinfectant levels.

(a) Maximum residual disinfectant levels (MRDLs) are as follows:

Disinfectant residual	MRDL (mg/L)
Chlorine	4.0 (as Cl_2).
Chloramines	4.0 (as Cl_2).
Chlorine dioxide	0.8 (as ClO_2).

(b) *Compliance dates*—(1) *CWSs and NTNCWSs.* Subpart H systems serving 10,000 or more persons must comply with this section beginning January 1, 2002. Subpart H systems serving fewer than 10,000 persons and systems using only ground water not under the direct influence of surface water must comply with this subpart beginning January 1, 2004.

(2) Transient NCWSs. Subpart H systems serving 10,000 or more persons and using chlorine dioxide as a disinfectant or oxidant must comply with the chlorine dioxide MRDL beginning January 1, 2002. Subpart H systems serving fewer than 10,000 persons and using chlorine dioxide as a disinfectant or oxidant and systems using only ground water not under the direct influence of surface water and using chlorine dioxide as a disinfectant or oxidant must comply with the chlorine dioxide MRDL beginning January 1, 2004.

(c) The Administrator, pursuant to Section 1412 of the Act, hereby identifies the following as the best technology, treatment techniques, or other means available for achieving compliance with the maximum residual disinfectant levels identified in paragraph (a) of this section: control of treatment processes to reduce disinfectant demand and control of disinfection treatment processes to reduce disinfectant levels.

[63 FR 69465, Dec. 16, 1998, as amended at 66 FR 3776, Jan. 16, 2001]

§ 141.66 Maximum contaminant levels for radionuclides.

(a) [Reserved]

(b) *MCL for combined radium-226 and -228.* The maximum contaminant level for combined radium-226 and radium-228 is 5 pCi/L. The combined radium-226 and radium-228 value is determined by the addition of the results of the analysis for radium-226 and the analysis for radium-228.

(c) *MCL for gross alpha particle activity (excluding radon and uranium).* The maximum contaminant level for gross alpha particle activity (including radium-226 but excluding radon and uranium) is 15 pCi/L.

(d) *MCL for beta particle and photon radioactivity.* (1) The average annual concentration of beta particle and photon radioactivity from man-made radionuclides in drinking water must not produce an annual dose equivalent to the total body or any internal organ greater than 4 millirem/year (mrem/year).

(2) Except for the radionuclides listed in table A, the concentration of man-made radionuclides causing 4 mrem total body or organ dose equivalents must be calculated on the basis of 2 liter per day drinking water intake using the 168 hour data list in "Maximum Permissible Body Burdens and Maximum Permissible Concentrations of Radionuclides in Air and in Water for Occupational Exposure," NBS (National Bureau of Standards) Handbook 69 as amended August 1963, U.S. Department of Commerce. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies of this document are available from the National Technical Information Service, NTIS ADA 280 282, U.S. Department of Commerce, 5285 Port Royal Road, Springfield, Virginia 22161. The toll-free number is 800–553–6847. Copies may be inspected at EPA's Drinking Water Docket, 401 M Street, SW., Washington, DC 20460; or at the National Archives and Records

Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.* If two or more radionuclides are present, the sum of their annual dose equivalent to the total body or to any organ shall not exceed 4 mrem/year.

TABLE A—AVERAGE ANNUAL CONCENTRATIONS ASSUMED TO PRODUCE: A TOTAL BODY OR ORGAN DOSE OF 4 MREM/YR

1. Radionuclide	Critical organ	pCi per liter
2. Tritium	Total body	20,000
3. Strontium-90	Bone Marrow	8

(e) *MCL for uranium.* The maximum contaminant level for uranium is 30 μg/L.

(f) *Compliance dates.* (1) Compliance dates for combined radium-226 and -228, gross alpha particle activity, gross beta particle and photon radioactivity, and uranium: Community water systems must comply with the MCLs listed in paragraphs (b), (c), (d), and (e) of this section beginning December 8, 2003 and compliance shall be determined in accordance with the requirements of §§ 141.25 and 141.26. Compliance with reporting requirements for the radionuclides under appendix A to subpart O and appendices A and B to subpart Q is required on December 8, 2003.

(2) [Reserved]

(g) *Best available technologies (BATs) for radionuclides.* The Administrator, pursuant to section 1412 of the Act, hereby identifies as indicated in the following table the best technology available for achieving compliance with the maximum contaminant levels for combined radium-226 and -228, uranium, gross alpha particle activity, and beta particle and photon radioactivity.

TABLE B—BAT FOR COMBINED RADIUM-226 AND RADIUM-228, URANIUM, GROSS ALPHA PARTICLE ACTIVITY, AND BETA PARTICLE AND PHOTON RADIOACTIVITY

Contaminant	BAT
1. Combined radium-226 and radium-228	Ion exchange, reverse osmosis, lime softening.
2. Uranium	Ion exchange, reverse osmosis, lime softening, coagulation/filtration.
3. Gross alpha particle activity (excluding Radon and Uranium)	Reverse osmosis.
4. Beta particle and photon radioactivity	Ion exchange, reverse osmosis.

(h) *Small systems compliance technologies list for radionuclides.*

TABLE C—LIST OF SMALL SYSTEMS COMPLIANCE TECHNOLOGIES FOR RADIONUCLIDES AND LIMITATIONS TO USE

Unit technologies	Limitations (see footnotes)	Operator skill level required [1]	Raw water quality range and considerations. [1]
1. Ion exchange (IE)	(a)	Intermediate	All ground waters.
2. Point of use (POU[2]) IE	(b)	Basic	All ground waters.
3. Reverse osmosis (RO)	(c)	Advanced	Surface waters usually require pre-filtration.
4. POU[2] RO	(b)	Basic	Surface waters usually require pre-filtration.
5. Lime softening	(d)	Advanced	All waters.
6. Green sand filtration	(e)	Basic.	
7. Co-precipitation with Barium sulfate	(f)	Intermediate to Advanced	Ground waters with suitable water quality.
8. Electrodialysis/electrodialysis reversal.		Basic to Intermediate	All ground waters.
9. Pre-formed hydrous Manganese oxide filtration.	(g)	Intermediate	All ground waters.
10. Activated alumina	(a), (h)	Advanced	All ground waters; competing anion concentrations may affect regeneration frequency.
11. Enhanced coagulation/filtration	(i)	Advanced	Can treat a wide range of water qualities.

[1] National Research Council (NRC). Safe Water from Every Tap: Improving Water Service to Small Communities. National Academy Press. Washington, D.C. 1997.

[2] A POU, or "point-of-use" technology is a treatment device installed at a single tap used for the purpose of reducing contaminants in drinking water at that one tap. POU devices are typically installed at the kitchen tap. See the April 21, 2000 NODA for more details.

Limitations Footnotes: Technologies for Radionuclides:

[a] The regeneration solution contains high concentrations of the contaminant ions. Disposal options should be carefully considered before choosing this technology.

[b] When POU devices are used for compliance, programs for long-term operation, maintenance, and monitoring must be provided by water utility to ensure proper performance.

[c] Reject water disposal options should be carefully considered before choosing this technology. See other RO limitations described in the SWTR Compliance Technologies Table.

[d] The combination of variable source water quality and the complexity of the water chemistry involved may make this technology too complex for small surface water systems.

[e] Removal efficiencies can vary depending on water quality.

[f] This technology may be very limited in application to small systems. Since the process requires static mixing, detention basins, and filtration, it is most applicable to systems with sufficiently high sulfate levels that already have a suitable filtration treatment train in place.

[g] This technology is most applicable to small systems that already have filtration in place.

[h] Handling of chemicals required during regeneration and pH adjustment may be too difficult for small systems without an adequately trained operator.

[i] Assumes modification to a coagulation/filtration process already in place.

TABLE D—COMPLIANCE TECHNOLOGIES BY SYSTEM SIZE CATEGORY FOR RADIONUCLIDE NPDWR'S

Contaminant	Compliance technologies [1] for system size categories (population served)		3,300–10,000
	25–500	501–3,300	
1. Combined radium-226 and radium-228	1, 2, 3, 4, 5, 6, 7, 8, 9	1, 2, 3, 4, 5, 6, 7, 8, 9	1, 2, 3, 4, 5, 6, 7. 8, 9.
2. Gross alpha particle activity	3, 4	3, 4	3, 4.
3. Beta particle activity and photon activity	1, 2, 3, 4	1, 2, 3, 4	1, 2, 3, 4.
4. Uranium	1, 2, 4, 10, 11	1, 2, 3, 4, 5, 10, 11	1, 2, 3, 4, 5, 10, 11.

NOTE: [1] Numbers correspond to those technologies found listed in the table C of 141.66(h).

[65 FR 76748, Dec. 7, 2000]

Subpart H—Filtration and Disinfection

SOURCE: 54 FR 27527, June 29, 1989, unless otherwise noted.

§ 141.70 General requirements.

(a) The requirements of this subpart H constitute national primary drinking water regulations. These regulations establish criteria under which filtration is required as a treatment technique for public water systems supplied by a surface water source and public water systems supplied by a ground water source under the direct influence of surface water. In addition, these regulations establish treatment technique requirements in lieu of maximum contaminant levels for the following contaminants: *Giardia lamblia,* viruses, heterotrophic plate count bacteria, *Legionella,* and turbidity. Each public water system with a surface water source or a ground water source under the direct influence of surface water must provide treatment of that source water that complies with these treatment technique requirements. The treatment technique requirements consist of installing and properly operating water treatment processes which reliably achieve:

(1) At least 99.9 percent (3-log) removal and/or inactivation of *Giardia lamblia* cysts between a point where the raw water is not subject to recontamination by surface water runoff and a point downstream before or at the first customer; and

(2) At least 99.99 percent (4-log) removal and/or inactivation of viruses between a point where the raw water is not subject to recontamination by surface water runoff and a point downstream before or at the first customer.

(b) A public water system using a surface water source or a ground water source under the direct influence of surface water is considered to be in compliance with the requirements of paragraph (a) of this section if:

(1) It meets the requirements for avoiding filtration in §141.71 and the disinfection requirements in §141.72(a); or

(2) It meets the filtration requirements in §141.73 and the disinfection requirements in §141.72(b).

(c) Each public water system using a surface water source or a ground water source under the direct influence of

c – carcinogen
cs - carcinogenic, SSL may exceed saturation
DAF – Dilution Attenuation Factor
mg/kg – milligrams per kilogram
n – noncarcinogenic
nl - noncarcinogen, SSL may exceed ceiling limit
ns - noncarcinogen, SSL may exceed saturation
nls - noncarcinogen, SSL may exceed both saturation and ceiling limit
SSL – Soil Screening Level
µg/L – micrograms per liter

Key: I = IRIS; P = PPRTV; A = ATSDR; C = Cal EPA; X = APPENDIX PPRTV SCREEN (See FAQ #27); H = HEAST; F = See FAQ; J = New Jersey; O = EPA Office of Water; E = see user guide Section 2.3.5; L = see user guide on lead; M = mutagen; S = see user guide Section 5; V = volatile; R = RBA applied (See User Guide for Arsenic notice) ; c = cancer; n = noncancer; * = where: n SL < 100X c SL; ** = where n SL < 10X c SL; SSL values are based on DAF=1; m = Concentration may exceed ceiling limit (See User Guide); s = Concentration may exceed Csat (See User Guide)

APPENDIX D

SUMMARY OF EPA/NMED/RCRA ACTIVITY

2016 Major Refinery Activities and Events

January

- The annual Financial Assurance Cost Estimate was sent to the HWB.

February

- Approval With Modifications Investigation Work Plan OW-29 & OW-30 and North Drainage Ditch Areas

March

- The semi-annual pond sampling conducted.
- Annual Facility Wide Ground Water Monitoring Work Plan for 2017 submitted

April

- Submit Revised Facility Wide GW Monitoring Work Plan- 2012 Updates; 2013 Updates;2014 Updates for 2015
- Submit Revised Investigation Report SWMU 1 Aeration Basin and SWMU 14 Old API Separator

May

- Implement Investigation Work Plan for OW-29 and OW-30 Area and North Drainage Ditch
- Implement Investigation Work Plan for SWMUs 4 and 5
- Rejection Response to NMED Disapproval Revised Investigation Report SWMU 1 Aeration Basin and SWMU 14 Old API Separator
- Approval Extension Request Facility-Wide Ground Water Monitoring Work Plan - 2015 Updates

July

- Submit revised Interim Measures Report HC Seep Area
- Submit response to Notice of Violation regarding soil remediation during repair of wastewater pipeline

August

- Conducted annual groundwater sampling.

September

- The semi-annual pond sampling conducted.

October

- Submit third quarter status report for hydrocarbon seep area

December

- Submit SWMU 10 Investigation Report

Year 2016

- During numerous months of 2016, contractors performed repair/improvements to the evaporation pond earthen berms improving slope and stability.

APPENDIX E

SUMMARY OF ALL LEAKS, SPILLS AND RELEASES

2016 SPILL SUMMARY

January 2, 2016 – T-583 Ultra Low Sulfur Diesel

At 2040 hr on January 2, the offsites supervisor discovered the sandpiper pump for the distillate rundown line going to T-583 was leaking product to the ground surface. All liquid was contained within an earthen dike within the tank farm. The line was immediately blocked in. It was estimated that 34 bbls of Ultra Low Sulfur Diesel was spilled to the ground surface. The onsite vacuum truck began removing liquid from the spill area removing 30 to 32 bbls. Field screening was conducted and soil contamination was excavated and 139,188 pounds of non-hazardous soil was placed into lined roll-off boxes and shipped offsite for disposal.

January 7, 2016 – WWTP Carbon Canisters

At 2300 hr on January 7, wastewater operators were back washing the south carbon canister when wastewater was released from the rupture disk. A blocked valve downstream of the canister created pressure greater than 75 psi causing the rupture disk to rupture. The release duration was 20 minutes with an average flow of 96.6 gpm. Approximately 1,932 gallons (46 barrels) of wastewater was released. The wastewater filled the earthen dike containment and subsequently overflowed allowing the wastewater to travel downhill toward Pond EP-1 but not entering EP-1. A sample of the spilled liquid was collected and submitted to Westerns onsite lab which showed a benzene concentration of .45 mg/l. A vacuum truck was used to remove the treated wastewater from the affected area at the WWTP around the carbon canister containment area and the sloping downhill area. The vacuum truck removed 27 bbls from the containment area and an additional 5 to 7 bbl from the area downhill of the carbon canisters. On January 11, 2 to 3 inches of soil was removed from the area north of the containment structure and the lower level. Four cubic yards of soil was excavated and placed into a roll off box and sent offsite for disposal.

February 5, 2016 – T-714 FCC Feed Tank Overflow

At 0415 hr on February 5, the pumper gauger observed T-714 overflowing. Valves were blocked in and product was rerouted to T-701. The onsite fire department sprayed a blanket of foam and water over the entire affected area. A contract vacuum truck began removing liquids until further assessment could be determined. The cause of the release was failure of Pumper Technicians to identify and follow red zone procedures regarding safe fill height. The worst case volume released was 1,543 bbls of FCC feed. A contract company determined that in-situ solidification in roll off boxes would be required. The non-hazardous material (1,583.75 tons) was shipped offsite for disposal. Additional hot spot removal was conducted on August 10 and 31 and an additional 21.03 tons was disposed of offsite.

April 3, 2016 – Baker Tank – ASO Caustic Release

At 1145 hr on April 3, a load of caustic material from the API knock out drum was off loaded into a Baker Tank that was storing acid soluble oil. A chemical reaction occurred due to the mixing of incompatible wastes. The Baker Tank overflowed causing four barrels of the material to be spilled to the ground surface. The spilled material flowed south to the East Gate Road and then westward along the road. A vacuum truck removed the spill material from the ground and from within the Baker Tank plastic secondary containment. The remediation consisted of the initial remediation where six inches of soil was removed and placed into two roll-off bins and shipped offsite as a non-hazardous waste. Based on analytical results an additional excavation was required where an additional 6 inches of soil was removed and 19,480 pounds of soil was placed into a roll off box and disposed offsite.

June 1, 2016 – Alkylate Leak at Valve

At 1100 hr on June 1, Dexter was doing their valve and pump monitoring in the tank farm and found a small leak coming from a valve bonnet on the Pump Discharge to T-563 line. The line was depressured to T-563 and the leak stopped. One quarter gallon of alkylate reached the ground surface and was cleaned up by environmental.

June 12, 2016 – API Knock-out Drum Sump

At 1615 hr on June 12, hydrocarbon from the flare knock-out drum was being drained to the sump and one gallon leaked onto the ground and the remaining liquid was caught in a bucket. The small amount of stained soil was cleaned up by maintenance.

July 23, 2016 – T-106 Overfill Distillate Release

At 0900 hr to 0935 hr on July 23, during the KHT/DHT startup, T-228 was being transferred to T-106. In the process T-106 overfilled and 243 bbls of distillate spilled into the earthen containment. The containment also contained rainfall. A vacuum truck removed 286 bbls of distillate and water mixture which was recycled back to the WWTP. In late August soil cleanup was contracted out and a small bobcat was used with a vactor truck for the soils under the pipeline. Shovel work by hand was used for the tight spots. Some spill material got under the base of the tank and when the weather warmed up in September this material spread. This required an additional mobilization by the contractor who cleaned up the additional contaminated soil. Ten twenty cubic yard bins were filled with the soil (approximately 200 tons) and shipped offsite for disposal as a non-hazardous waste.

July 23, 2016 – PRV Oil/Water Release at GC Unit

The check valve on the 40# Steam to the Secondary Column failed, causing oil to back into the 40# steam header. The 40# steam PRV relieved causing a mixture of oil and steam that was released to atmosphere over the GAS CON unit, at 49 pounds for about 10 minutes. The total release was 13 bbl of which 1.5 bbl reached the ground surface while the rest stayed within the

unit on concrete and equipment. The maintenance department cleaned up the oil off the ground surface. Analytical indicates some soil removal will still be required in this area.

August 18, 2016 – Sewer Cup Overflow SWS Unit

At 0145 hr on August 18, an Operator discovered hydrocarbon and water mixture coming out of the sewer cups in the sour water stripper unit. St Run Water Wash level controller was found to be open possibly due to plugging in the bridle level controller, it was blocked in and eventually sewers stopped running over. AFFF foam was spread over the affected area to prevent fire danger. The release was estimated to be Straight Run/H2O mixture of approximately 200 gallons. A WO was written for maintenance to clean up soil. Cleanup has not been completed and environmental will now take charge of cleanup using third party.

August 23, 2016 – CTI Truck Hydrocarbon Overflow

At 1000 hr on August 23, Approximately 5 gallon of hydrocarbon over flowed off CTI's truck through the air valve that is located on top of the truck. Approximately 5 gallons of hydrocarbon leaked from T-35 to the south side of the lab building. The CTI truck was stopped and the truck operator was notified. The hydrocarbon was cleaned up and the truck valve was checked.

September 30 – Silver Strip Additive Cooling Tower

At 1920 hr on September 30, the Off-Sites supervisor was picking up some silver strip additive at cooling tower after unit operator filled buckets. While picking up a 5 gallon bucket, the handle broke on bucket spilling contents on ground. The spill was cleaned up.

October 5, 2016 – GE SPECAID Tote Leak

At 1245 hr on October 5, a tote of GE SPECAID 8Q5352ULS had a faulty valve and 1/2 gallon of chemical released to the ground (asphalt) at the warehouse yard. The chemical was mixed with oil dry and placed into a drum for shipment offsite as a hazardous waste.

FAX (505) 722-0210

RE: OCD Central Landfarm Semiannual Sampling OrderNo.: 1606995

Dear Ed Riege:

Hall Environmental Analysis Laboratory received 9 sample(s) on 6/17/2016 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0190

Sincerely,

Andy Freeman
Laboratory Manager

RE: OCD Central Landfarm Semiannual Sampling OrderNo.: 1609455

Dear Ed Riege:

Hall Environmental Analysis Laboratory received 11 sample(s) on 9/8/2016 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0190

Sincerely,

Andy Freeman

RE: Quarterly GW Sampling OrderNo.: 1603150

Dear Cheryl Johnson:

Hall Environmental Analysis Laboratory received 2 sample(s) on 3/2/2016 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0190

Sincerely,

Andy Freeman
Laboratory Manager

RE: Quarterly GW Sampling OrderNo.: 1603154

Dear Cheryl Johnson:

Hall Environmental Analysis Laboratory received 4 sample(s) on 3/2/2016 for the analyses presented in the following report.

This report is a revised report and it replaces the original report issued April 01, 2016.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. All samples are reported as received unless otherwise indicated.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

Andy Freeman

Laboratory Manager

RE: Quarterly GW Sampling OrderNo.: 1603229

Dear Cheryl Johnson:

Hall Environmental Analysis Laboratory received 4 sample(s) on 3/3/2016 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0190

Sincerely,

Andy Freeman
Laboratory Manager

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:

*	Value exceeds Maximum Contaminant Level.	B	Analyte detected in the associated Method Blank
D	Sample Diluted Due to Matrix	E	Value above quantitation range
H	Holding times for preparation or analysis exceeded	J	Analyte detected below quantitation limits
ND	Not Detected at the Reporting Limit	P	Sample pH Not In Range
R	RPD outside accepted recovery limits	RL	Reporting Detection Limit
S	% Recovery outside of range due to dilution or matrix	W	Sample container temperature is out of limit as specified

RE: Quarterly GW Sampling OrderNo.: 1603424

Dear Cheryl Johnson:

Hall Environmental Analysis Laboratory received 6 sample(s) on 3/8/2016 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0190

Sincerely,

Andy Freeman
Laboratory Manager

RE: Quarterly GW Sampling OrderNo.: 1603152

Dear Cheryl Johnson:

Hall Environmental Analysis Laboratory received 6 sample(s) on 3/2/2016 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0190

Sincerely,

Andy Freeman

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:

*	Value exceeds Maximum Contaminant Level.	B	Analyte detected in the associated Method Blank
D	Sample Diluted Due to Matrix	E	Value above quantitation range
H	Holding times for preparation or analysis exceeded	J	Analyte detected below quantitation limits
ND	Not Detected at the Reporting Limit	P	Sample pH Not In Range
R	RPD outside accepted recovery limits	RL	Reporting Detection Limit
S	% Recovery outside of range due to dilution or matrix	W	Sample container temperature is out of limit as specified
