614 Reilly Avenue
Farmington, New Mexico 87401

Attention: Mr. David Bays

**RE: CLOSURE REPORT FOR
BURTON FLATS GAS PLANT
CARLSBAD, NEW MEXICO**

The following report covers site closure activities at the Burton Flats Gas Plant near Carlsbad NM (see attached Vicinity Map). Site work was started under the original Work Request No. DJB0045 and continued under subsequent Work Request Nos. DJB0066, DJB0071, DJB0070 and DJB0072.

Work at the site started on 11 July, 2000 and continued to 14 July, 2000. All site work was performed in accordance with El Paso Energy Corporation and AGRA Earth and Environmental Health and Safety guidelines (see attached Health and Safety Plan). Work on the site was temporarily stopped on 14 July, 2000 due to the discovery of a larger than expected area of soil contamination.

On 13 July, 2000, samples were collected from three (3) locations identified as E. End Process Skid, N. Side Pump Pad and S.E. Side Process Skid (see attached Site Map). These samples were sent to SPL laboratories in Houston TX and analyzed for Volatile Organic (method 8260 B), Semi Volatile Organic (method 8270C), Reactivity (methods 7.3.3.1 and 7.3.4.2), Corrosive (method 9045C), and Ignitability (method 1010) and Total Petroleum Hydrocarbons (TPH) (method 418.1). See attached Laboratory Sample Results.

The results of this sampling event shows higher than regulatory limits for Benzene and TPH at the location identified as E. End Process Skid. Laboratory results for this sample location shows 18 parts per million (ppm) Benzene and 8,500 ppm TPH. Laboratory results for the location identified as N. Side Pump Pad shows 1,400 ppm TPH. Regulatory limits for soils are set by New Mexico Oil Conservation Division (NMOCD) at 10 ppm Benzene and 100 ppm TPH.

The decision was made by El Paso Field Services to continue excavation in such a manner as to remove contaminated soil without endangering the integrity of nearby equipment foundations. This was accomplished by excavating from the edges of the foundations outward.

Work at the site was resumed on 31 July, 2000 and continued through to 18 August 2000. A total of 2990 cubic yards of contaminated soil, described as non-exempt hydrocarbon contaminated soil, and 630 gallons of exempt Amine water and sludge was removed and sent for disposal to the Gandy Marley, Inc. disposal facility (see attached Certificates of Waste Status Forms, Manifest and Load Tickets). The disposal facility is located on Hwy 380, 34 miles West of Tatum, New Mexico. The facility's ID number is SCC14225 and their New Mexico OCD permit number is 711-01-0020. ProCycle Oil and Metals, Texas Natural Resource Conservation Commission's (TNRCC's) Registration No. C82431, located at 315 Pronto St. Odessa TX, removed 550 gallons of oily water

and 510 gallons of antifreeze for recycling (see attached Certificates of Waste Status Forms, Manifest and Load Tickets).

On 1 August, 2000 samples were collected from six (6) areas north of the Pump Pad (see attached Site Maps with photographs for sample locations), these samples were also sent to SPL labs and analyzed for Benzene, Ethyl benzene, Toluene and Xylenes (BTEX) and TPH. With the exception of samples identified as 01 South Wall North of Pump Pad and 03 East Wall North of Pump Pad, sample concentrations were below regulatory limits. Sample 01 South Wall North of Pump Pad contained 920 ppm TPH and sample 03 East Wall North of Pump Pad contained 2800 ppm TPH.

Sample 01 was collected from the North side of the Pump Pad foundation (Photo # 19 see attached Site Photos) and sample 03 was collected from the West side of the Cryo skid (Photo # 18). No further soil removal was possible in these areas without undermining the foundations for the Pump Pad and Cryo skid, which remain on the site.

On 10 August, 2000, samples were collected from eight (8) locations within the excavated area identified as the E. End of the Process Skid. These samples were also sent to SPL labs for TPH and BTEX analysis. With the exception of the sample identified as 06 E. End Process Skid West wall 40 feet, all samples were below regulatory limits. Sample 06 E. End Process Skid West wall 40 feet, which contained 4700 ppm TPH, was collected from the E. Side of the Process Skid foundation (Photo # 4). No further soil removal was possible in this area without undermining the foundation for the process skid which was to remain on the site.

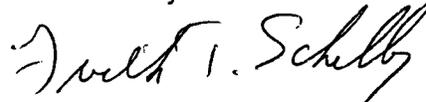

Should you have any questions, please feel free to contact our office.

Respectfully submitted,

AGRA Earth & Environmental, Inc.

George A. Friend

**HEALTH AND SAFETY PLAN
SITE REMEDIATION ACTIVITIES
EL PASO FIELD SERVICES
BURTON FLATS GAS PLANT
CARLSBAD, NEW MEXICO**

A. SITE DESCRIPTION

Location: Carlsbad, New Mexico

Hazards: Potential Petroleum contaminated soils, heavy equipment, Heat-related Stress, and noise

Topography: Site is predominantly flat.

Weather conditions: Hot.

Additional information: Heat Stress may occur in temperatures over 85 degrees. Watch for symptoms of heat stress and/or cold stress. Injuries in and around heavy equipment are common and should be watched.

B. ENTRY OBJECTIVES

The field work will include the removal and disposal of all liquids and contaminated soils on site.

C. ON-SITE ORGANIZATION AND COORDINATION

The following personnel are designated to carry out the stated job functions on site. (Note: One person may carry out more than one job function.)

PROJECT MANAGER: George Friend, AGRA

SITE SAFETY OFFICER/
SITE SUPERVISOR: Arnold Gilmore, AGRA

OTHER PERSONNEL: Sub contractors (Arguijo Oil Field Services)

STATE AGENCY REPS:

CLIENT REPS: David Bays El Paso Field Services

D. HAZARD EVALUATION

Various types of chemical and physical hazards may be encountered on AGRA projects. AGRA personnel and the site safety officer are responsible for determining the types of respirator cartridges and protective gloves and suits required when conducting the work. The following substance(s) are known or suspected to be on site. The primary hazards of each are identified.

Substances Involved

Concentrations (If Known)

Primary Hazards

Petroleum Hydrocarbons		Inhalation, Ingestion Fire, Explosion
Benzene	<5 ppm	Inhalation, Ingestion Fire, Explosion
Ethylbenzene	<5 ppm	Inhalation, Ingestion Fire, Explosion
Toluene	<5 ppm	Inhalation, Ingestion Fire, Explosion
Xylenes	<5 ppm	Inhalation, Ingestion Fire, Explosion

The PEL/TLV (permissible exposure limit, threshold limit value), STEL (short term exposure limit) and IDLH (immediately dangerous to life and health) values for compounds that are readily detectable on-site are listed in Table 1.

TABLE 1

Chemical	PEL/TLV	STEL	IDLH
Benzene	1 ppm	5 ppm	2,000 ppm
Toluene	100 ppm	150 ppm	2,000 ppm
Ethylbenzene	100 ppm	125 ppm	2,000 ppm
Xylenes	100 ppm	150 ppm	10,000 ppm

The following additional hazards are expected on site:

On-Site personnel should be aware of vehicle traffic and of moving parts on the various equipment and backhoe equipment. Other physical hazards include overhead hazards, slipping, tripping, falling, cuts, bruises, strains, sprains, heat stress, biohazards, snakes, and dust. Caution should also be exercised around open excavations, including trenches and test pits.

Exposure to these hazards will be minimized by using safe work practices and personnel protective equipment.

E. PERSONAL PROTECTIVE EQUIPMENT

Required Level D PPE:

- Hard hat
- Safety glasses
- Steel toe/shank boots
- Hearing protection
- Work gloves

Level C PPE:

- Half-face air purifying respirator (SHA/NIOSH approved) with suitable safety glasses and OV-HEPA cartridges (purple-black color)
- White tyvek suits, chemical resistant;
- PVC or nitrile gloves with work gloves on outside
- Steel toe/shank boots and hard hat
- Hearing protection

Based on evaluation of potential hazards, the following levels of personal protection have been designated for the applicable work areas or tasks:

Level D: Will be required for all tasks unless sustained organic vapors, explosion hazards, or low or excessive oxygen levels occur within any persons breathing zone which will require an upgrade to one of the levels listed below. Level D protection is anticipated for all operations on this project.

Level C: 20 ppm - 300 ppm on the Photo ionization Detector (PID)

First-aid equipment is available on-site at the following locations:

First-aid kit: In the AGRA truck on-site
Other: Phone in the AGRA truck
Fire Extinguishers located in AGRA truck and on site

G. CONTINGENCY PLAN

1. Emergency Procedures (should be modified as required for any incident)

The following standard emergency procedures will be used by on-site personnel. The Site Safety Officer (SSO) shall be notified of any on-site emergencies and be responsible for ensuring that the appropriate procedures are followed.

Personnel Injury: The SSO and Project Manager should evaluate the nature of the injury, and the affected person should be decontaminated to the extent possible prior to movement. The SSO shall initiate the appropriate first aid, and arrangements should be made for an ambulance and with the designated medical facility (if required).

No persons shall reenter the work zone until the cause of the injury or symptoms is determined and remedied. If the cause of the injury or absence of the injured person does not affect the performance or safety of the remaining site personnel, operations may continue, with the on-site Safety Officer initiating the appropriate first aid and necessary follow-up.

Fire/Explosion: Upon notification of a fire or explosion on site, all site personnel will assemble upwind at a safe distance. The fire department shall be alerted and all personnel moved to a safe distance from the involved area.

Personal Protective Equipment Failure: If any site worker experiences a failure or alteration of protective equipment that affects the protection factor, that person shall immediately leave the Exclusion Zone. Reentry shall not be permitted until the equipment has been repaired or replaced.

Other Equipment Failure: If any other equipment on-site fails to operate properly, the Project Team Leader and SSO shall be notified and then determine the effect of this failure on continuing operations on-site. If the failure affects the safety of personnel or prevents safe completion of site activity, all personnel shall leave the work zone until the situation is evaluated and appropriate actions taken.

In all situations, when an onsite emergency results in evacuation of the Work Zone, personnel shall not reenter until:

- The conditions resulting in the emergency have been corrected.
- The hazards have been reassessed.
- The Site Safety Plan has been reviewed.
- Site personnel have been briefed on any changes in the Site Safety Plan.
- AGRA's office personnel have been informed of the emergency condition.

H. PERSONAL MONITORING

In the event situations require

1. A **Photo-ionization Device (PID)**, will be used in the event situations require the soil and atmosphere in the work zones to be monitored . Use of the buddy system for all tasks will be implemented.
2. A **Four Gas Meter** will be used in the event situations require the monitoring for explosion or fire hazards and for oxygen content. Should the meters demonstrate an unacceptable concentration, all work will cease in the area. The site safety officer will notify the Project Manager and appropriate measures to reduce the hazard or exposure to the hazard will be implemented. A personal monitoring log will be kept for all projects.

Action levels are as follows:

- a) **Oxygen:**
 - Less than 19.5% oxygen - Monitor wearing SCBA. Note: **Combustible gas readings are not valid in atmospheres <19.5% oxygen.**
 - 19.5% - 25% Oxygen - Continue monitoring, SCBA not needed based **ONLY** on oxygen content.
 - >25% Oxygen - **DISCONTINUE MONITORING, LEAVE SITE - FIRE POTENTIAL.**
- b) **Combustible Gas Indicator:**
 - <10% LEL - Continue monitoring with caution.
 - 10 - 20% LEL - Continue monitoring with extreme caution, especially as higher levels are encountered.
 - 20% LEL - **EXPLOSION HAZARD, EVACUATE FROM AREA.**
- c) **Organic Vapor Monitor:**
 - If concentrations of organic vapors **exceed 20 ppm**, or ten times the PEL for a given compound, **OVER THE BACKGROUND** in the breathing zone, upgrade the level of protection from Level D to Level C.
- d) **H₂S Indicator**
 - <10 ppm- continue monitoring with caution.
 - 10 ppm discontinue monitoring, **LEAVE WORK AREA AND CONGREGATE AT THE DESIGNATED MEETING POINT.**

I. GENERAL PROJECT SAFETY REQUIREMENTS

The project operations shall be conducted with the following minimum safety requirements employed:

1. Eating, drinking, chewing gum or tobacco, smoking, or any practice that increases the probability of hand to mouth transfer and ingestion of materials is prohibited in any work area except the designated break area.
2. Hands must be thoroughly washed upon leaving a contaminated or suspected contaminated area before eating, drinking, smoking, or any other activities transpire.
3. Legible and understandable precautionary labels shall be prominently affixed to containers of raw materials, intermediates, products, mixtures, scrap waste, debris, and contaminated clothing.
4. Contaminated protective equipment shall not be removed from the regulated area until it has been cleaned or properly packaged and labeled.
5. Removal of materials from protective clothing or equipment by blowing, shaking, or any other means which may disperse materials into the air is prohibited.
6. Project personnel on-site must use the "buddy" system when wearing any respiratory protective devices. Communications between members must be maintained at all times. Emergency communications shall be prearranged in case of encountering unexpected situations. Visual contact must be maintained between "pairs" on-site, and each team should remain in close proximity to assist each other in the event of an emergency.
7. Field operations personnel shall be cautioned to inform each other of symptoms of the presence of toxics, such as: headaches, dizziness, nausea, blurred vision, cramps, irritation of eyes, skin, or respiratory tract, changes in complexion or skin discoloration, changes in apparent motor coordination, changes in personality or demeanor, excessive salivation or changes in pupillary response, and changes in speech ability or pattern.
8. No excessive facial hair, which interferes with a satisfactory fit of the respirator will be allowed on personnel required to wear respirators.
9. All respiratory protection selection, use, and maintenance shall meet the requirements of established company procedures, recognized consensus standards (AIHA, ANSI, NIOSH), and shall comply with the requirements set forth in 29 CFR 1910.134.
10. Appropriate work areas for support, contamination reduction, and exclusion will be established.
11. All personnel on-site are to be thoroughly briefed on the anticipated hazards, equipment requirements, safety practices, emergency procedures and communications methods, initially and in daily briefings.
12. Employee vital signs will be monitored when ambient temperatures are above 95 degrees Fahrenheit.
13. Gross decontamination and removal of all personal protective equipment shall be performed prior to exiting the facility. Contaminated clothing will be removed and collected in a plastic

lined drum for disposal.

14. The project manager will be responsible to take the necessary steps to ensure that employees are protected from physical and chemical hazards, which could include: falling objects such as tools or equipment, falls from elevations, tripping over hoses, pipes, tools, or equipment, slipping on wet or oily surfaces, insufficient or faulty protective equipment, insufficient or faulty operations, equipment, or tools, and breathing difficulties.
15. An adequate supply of potable water shall be provided on the site. Portable containers used to dispense drinking water shall be capable of being tightly closed. Water shall not be dipped from containers. Any container used to distribute drinking water shall be clearly marked as to the nature of its contents and not used for any other purpose. Where single service cups are supplied, both a sanitary container for the unused cups and a receptacle for disposing of the used cups shall be provided. Employees will be provided with an adequate supply of water to wash their hands with while on site.
16. Excavation Safety Requirements
 1. Underground utilities such as gas and water mains and electrical lines should be located prior to excavation.
 2. The presence of underground structures such as tanks, vaults, etc., should be identified.
 3. Overhead power lines should be identified and equipment operators informed of their location.
 4. No employee other than the designated, licensed operator shall operate excavation equipment.
 5. Exhaust from engines or other combustion units should be directed away from the work area.
 6. No one shall enter test pits or excavations greater than (4) feet in depth.
 7. In the event that there is a need to enter an excavation deeper than four (4) feet, a site-specific entry plan will be prepared.

18. Hydrogen Sulfide

No potential for exposure to H₂S is anticipated at this site.

All site personnel shall read the above plan and be familiar with its provisions.

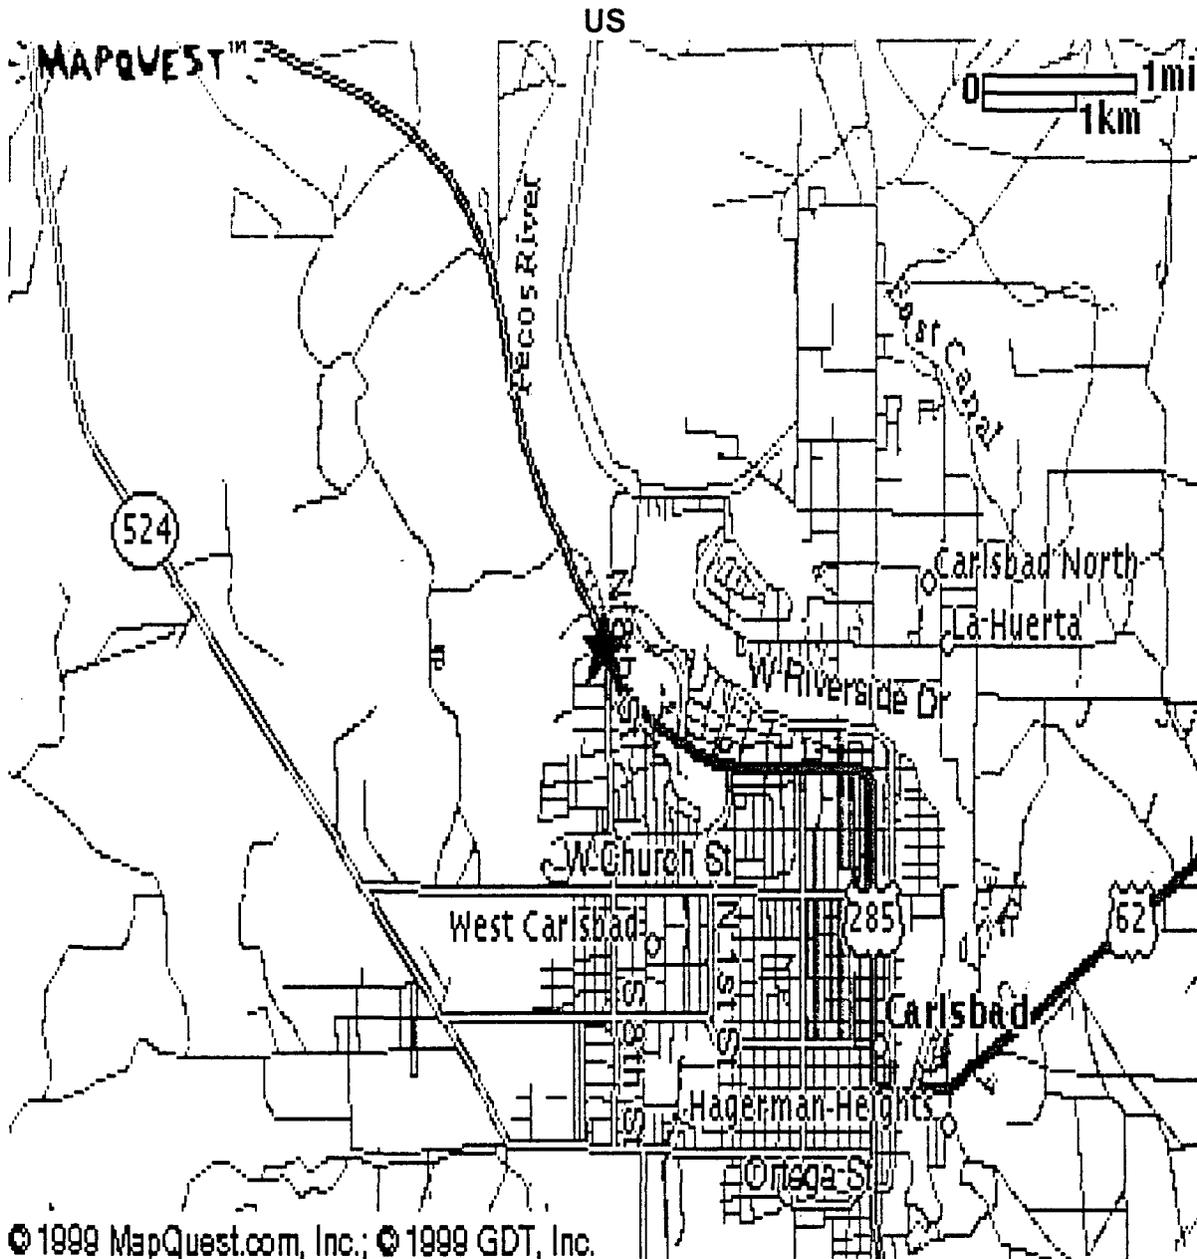

I have read the Site Specific Health and Safety Plan (SSHSP) for the **Burton Flats Gas Processing Facility** and fully understand the hazards associated with the project. I will comply with the minimum safety requirements set forth in the SSHSP. I agree to notify the responsible employee of AGRA should any unsafe acts be witnessed by me while I am on the project site.

Emiferia B. Hernandez	<i>Emiferia B. Hernandez</i>

Note: Load out 14 dump trucks with contaminated soil. permission to backfill acid today.

AGRA Earth and Environmental

Daily Safety Meeting

Project Name Burton Flat Gas flt. Project # 0517-000078
 Site Supervisor Arnold Gilmore Time 7:30 AM
 Location Crested n.m. Date 8-16-00

Planned Activities Load dump truck with contaminated soil. Backfill hole, east end of process skid north and south ends.

Safety Topics Presented Watch for cars off of bank while backfill is pushed in to fill.

PRINT NAME	SIGNATURE
Chen LUTEN	Chen Lutén
Emilia R. Hernandez	Emilia R. Hernandez
ARNOLD GILMORE	Arnold Gilmore

at! Load 15 loads contaminated soil, all bed soil off location.

AGRA Earth and Environmental Daily Safety Meeting

Project Name Burton Flats Gas pit Project # 0517-000078
 Site Supervisor Arnold Gilmore Time 7:15 A.M.
 Location Carlsbad N.M. Date 8-17-00

Planned Activities Load truck with contaminated soils
Back fill hole with clean soil.

Safety Topics Presented wear dust mask as needed while
backfilling.

PRINT NAME	SIGNATURE

AGRA Earth and Environmental Daily Safety Meeting

Project Name Burton Flat Gas Pit Project # 0517-000078
 Site Supervisor Arnold Gilman Time 7:00 A.M.
 Location Carlsbad N.M. Date 8-18-00

Planned Activities Continues to back fill hole east
And to N.E. of process skid.

Safety Topics Presented Drink plenty of fluid and wear
P.P. equipment.

PRINT NAME	SIGNATURE
Chen LUYEN	Chen LUYEN
Fernando R. Hernandez	Fernando R. Hernandez

Case Narrative for:
El Paso Energy

RECEIVED JUL 24 2000

Certificate of Analysis Number:
00070344

Report To: Agra Earth & Environmental George Faiend 8519 Jefferson North East Albuquerque NM 87113- ph: (505) 821-1801 fax: (505) 821-7371	Project Name: El Paso Energy Site: Carlsbad, NM Site Address: PO Number: State: New Mexico State Cert. No.: Date Reported:
---	---

Your sample ID "E. End Process Skid" (SPL ID: 00070344-01) was randomly selected for use in SPL's quality control program for the Total Petroleum Hydrocarbons analysis by SW846 Method 418.1. The Matrix Spike (MS) and Matrix Spike Duplicate (MSD) recoveries were outside of the advisable quality control limits for Petroleum Hydrocarbons, TR (Batch ID: R) due to matrix interference. A Laboratory Control Sample (LCS) was analyzed as a quality control check for the analytical batch and all recoveries were within acceptable limits.

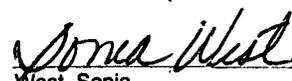

Your sample ID "E. End Process Skid" (SPL ID: 00070344-01) was randomly selected for use in SPL's quality control program for the Semivolatile Organics analysis by SW846 Method 8270. The Matrix Spike (MS) and Matrix Spike Duplicate (MSD) recoveries were outside of the advisable quality control limits for several compounds (Batch ID: 6048) due to matrix interference. A Laboratory Control Sample (LCS) was analyzed as a quality control check for the analytical batch and all recoveries were within acceptable limits.

Any data flags or quality control exceptions associated with this report will be footnoted in the analytical result page(s) or the quality control summary page(s).

Please do not hesitate to contact us if you have any questions or comments pertaining to this data report. Please reference the above Certificate of Analysis Number.

This report shall not be reproduced except in full, without the written approval of the laboratory. The reported results are only representative of the samples submitted for testing.

SPL, Inc. is pleased to be of service to you. We anticipate working with you in fulfilling all your current and future analytical needs.
