General Description of Remedial Action: Dug to 11' and found high chlorides and TPH.

CHLORIDE FIELD TESTS

Soil boring was completed 8/22/01 and found chlorides at 94 ppm @ 30' and TPH was 76 ppm.

The boring found redbed clay at 23' and no groundwater present. This site is surrounded by a historic oil spill from the adjacent tank battery. ROC excavated a radius of 15' up to the battery fence. A compacted clay layer was installed on the bottom and walls to create a barrier between the remediated junction box and the historic oil impacted area. A water tight junction box was installed and backfilled with clean soil. Natural attenuation will remediate the remaining hydrocarbon.

FINAL ANALYTICAL RESULTS: Sample Date 08/30/2001 Sample Depth 9'

Procure 5-point composite sample of bottom and 4-point composite sample of sidewalls. TPH, BTEX and Chloride laboratory test results completed by using an approved lab and testing procedures pursuant to NMOCD guidelines.

General Description of Remedial Action: Dug to 11' and found high chlorides and TPH.

Soil boring was completed 8/22/01 and found chlorides at 94 ppm @ 30' and TPH was 76 ppm.
The boring found redbed clay at 23' and no groundwater present. This site is surrounded by a historic oil spill from the adjacent Conoco battery. ROC excavated a radius of 15' up to Conoco's fence. A compacted clay layer was installed on the bottom and walls to create a barrier between the remediated junction box and the historic oil impacted area. A water tight junction box was installed and backfilled with clean soil.
