1.0 INTRODUCTION

This Stage 2 Abatement Plan, Remediation Activities Report for the Westgate Subdivision, Grimes Battery and Tasker Road, describes the activities related to the remediation of the site conducted in July 2001, September 2001, and the year of 2002.

2.0 2001 ACTIVITIES

2.1 Baseline Air Monitoring - Air Quality Survey and Test Excavation and Isolation Flux Chamber Sampling

The report detailing the baseline air quality monitoring and flux chamber air monitoring activities was submitted to the NMOCD on September 17, 2002 by BBC International, Inc. (BBC). This report describes the activities conducted in July 2001 by URS Corporation and is titled *Characterization Of Potential Air Emissions Associated With Remediation Activities Near The Westgate Subdivision, Phase I Final Air Monitoring Report, March 2002*.

2.2 Surface Soil Removal - West Grimes Battery Area and Backfilling of Previous Soil Removal Areas

In September 2001, surficial soils that had been impacted by hydrocarbons on the west and northeast sides of the Grimes Battery site were removed, disposed of, and backfilled with clean top soil. These impacted soils had been discovered and investigated in the previous site investigations. In addition, three (3) areas that had been previously excavated and disposed of were backfilled with clean top soil (**See report: Westgate Subdivision, Grimes Battery and Tasker Road, Stage 2 Abatement Plan, October 1999, Sections 4.1.1 Task 1; 4.1.2. Task 2; 4.1.3. Task 3**). These activities were approved by the NMOCD in their letter dated May 2, 2001.

The volume of soil that was removed in Tasks 1 and 2 was 10,248 cubic yards with a maximum depth of five (5) feet in places. The soil was disposed of at the NMOCD-approved disposal facility owned and operated by Sundance Services in Eunice, NM.

During the beginning of the process of soil removal (Tasks 1 and 2), plaintiff representatives¹ were present and requested taking some samples. BBC split samples with the plaintiffs on September 14, 2001 and BBC's data results are located in **APPENDIX I – Table 1**. The analytical tests run were USEPA Method 418.1 TPH. Soil removal continued and again samples were taken and split with the plaintiffs on September 18, 2001 with the results located in **APPENDIX I – Table 2**. The analytical tests performed were USEPA Methods 418.1 TPH, 8260B BTEX, and New Mexico Water Quality Control Commission (WQCC) metals. Soil removal continued and again samples were taken and split with the plaintiffs on September 18, 2001 with the results located in **APPENDIX I – Table 3**. Soil removal continued and on September 25, 2001 bottom confirmation samples were taken with the results located in **APPENDIX I – Table 4**. The analytical tests run were USEPA Methods 418.1 TPH, 8260B BTEX, and New Mexico Water Quality Control Commission (WQCC) metals. The results were below NMOCD-approved Stage 2 Abatement Plan levels and the sites were backfilled with clean top soil. During soil removal and backfilling operations, a water truck was used for dust control and compaction per the Stage 2 Abatement Plan.

The amount of top soil backfilled for all three areas (Tasks 1, 2, and 3) was 11,232 cubic yards.

¹ The referenced plaintiffs are those in the Conception and Rosario Acosta, et al., Plaintiffs vs. Shell Western Exploration and Production, Inc.; Shell Oil Company, Altura Energy, L.L.C.; Altura Energy LTD.; and Los Cuarto, Inc. a/k/a Los Cuarto, Defendants

The data obtained by the plaintiffs was not made available; therefore no plaintiff data is included with this report.

2.3 Air Discharge Permit Activities

As discussed with the NMOCD (*See report: Westgate Subdivision, Grimes Battery and Tasker Road, Stage 2 Abatement Plan, May 2000, Section 2.9*) the New Mexico Environment Department, Air Quality Bureau (AQB), was contacted for a determination of necessary discharge permits. Mr. R.C. Cudney of Environmental Services, Inc. of Albuquerque was contracted to contact the AQB to determine the necessity of a discharge permit for the air treatment system to be utilized on the site. Mr. Cudney utilized the data acquired by URS Corporation (*See report: Characterization Of Potential Air Emissions Associated With Remediation Activities Near The Westgate Subdivision, Phase I Final Air Monitoring Report*) and the required models to file a Notice of Intent with the AQB. This Notice of Intent was submitted to the AQB on December 19, 2001 and was reviewed by the AQB. On January 9, 2002, the AQB issued a determination that the emissions from the air treatment units were too low to trigger 20 NMAC 2.72 – Construction Permits or 2.73 – Notice of Intent and Emissions Inventory Requirements. Therefore the AQB issued a notice of No Permit Required (NPR) authorizing the operation of the facility as stated in the application (the letter of January 9, 2002). In addition, the AQB determined that the New Source Performance Standards (NSPS) or National Emission Standards for Hazardous Air Pollutants (NESHAPS) did not apply to this activity. A copy of this letter was submitted to the NMOCD.

3.0 2002 ACTIVITIES

3.1 Westgate Remediation Site Preparations

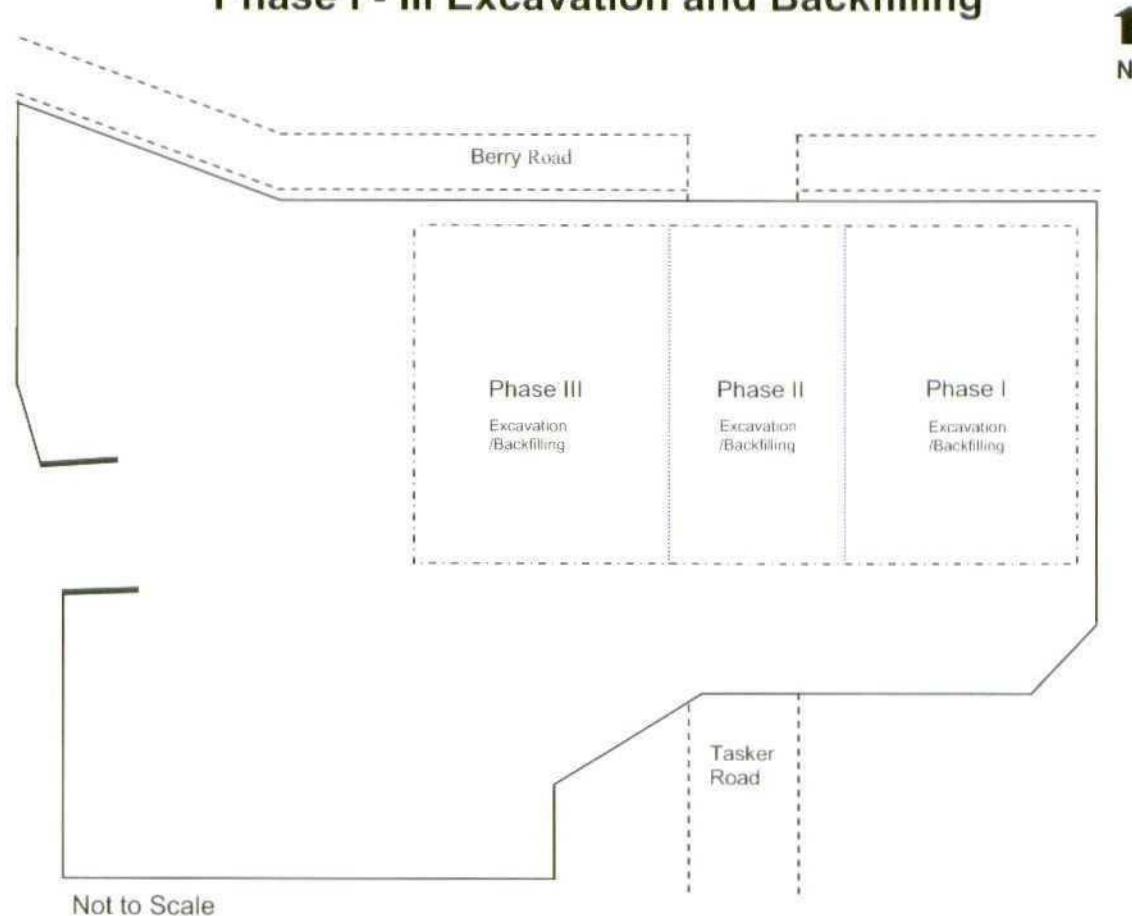

Upon the completion of all requirements necessary to start the site preparation for the Tasker Road remediation activities (*See report: Westgate Subdivision, Grimes Battery and Tasker Road, Stage 2 Abatement Plan, October 1999, Sections 4.1.4 Task 4; 4.1.5. Task 5 and See report: Westgate Subdivision, Grimes Battery and Tasker Road, Stage 2 Abatement Plan, May 2000, Section 2.8*) the site was fenced off closing Tasker Road to through traffic for security and street barricades and detour signs were installed around the neighborhood according to the City of Hobbs regulations (*See Diagram 1*). These activities were performed starting February 26, 2002 through March 6, 2002. In addition, a bus turnaround was installed on the south side of the fenced site on Tasker Road for school buses that operated in the neighborhood. The rest of the site was prepared with the installation of office trailers, electrical wiring, the tire wash station, and a storm water diversion berm around the site perimeter through March 15, 2002.

On March 18, 2002, the installation of the fabric structure began. This structure was manufactured by Universal Fabric Structures of Quakertown, Pennsylvania. The structure consisted of an aluminum metal framework with a durable all-weather PVC membrane fabric covering. This structure provided the best technology for control of dust and any volatilized organic emissions and also provided protection from the elements during excavation. The structure had an opening large enough for earth moving equipment to pass through with a roll up door and man-door for entrance and exit.

In addition to providing a cover for the excavations, the structure was operated in a negative pressure atmosphere with four air intake vents on the north side of the structure. On the south side of the structure four outlet vents were connected to an air treatment system adjacent to the structure via ductwork. This air scrubbing system was comprised of two electrically powered low pressure, high volume (cubic feet per minute or cfm) blowers that drew the air from inside the structure through two fixed beds of activated carbon then to vent pipes for release to the atmosphere. The activated carbon beds removed dust and stripped the air of any volatile organics. The air treatment system was

designed and manufactured by TIGG Corporation of Pittsburgh, Pennsylvania. In order to assist in the reduction of noise associated with the air treatment system, insulated wooden sound barriers were erected around the blowers. In addition, a meteorological station and two PM-10 particulate monitoring stations were installed. The site was completed and ready for implementation on April 3, 2002. Photographs of the set up activities can be found in [Appendix II: Site Photographs; Structure Assembly](#).

Diagram 1: Westgate Site Layout Phase I - III Excavation and Backfilling

3.2 Open House

Prior to the start of remediation activities, two open houses were held at the site. The purpose of the open houses was to allow a tour of the site and to explain the operations that were to be conducted at the site. The first open house held on April 5, 2002 was for NMOCD officials, the media, and city and state officials. The second open house held on April 6, 2002 was for the residents of the Westgate neighborhood.

3.3 Phase I – Excavating and Backfilling

On April 15, 2002, Phase I soil removal operations started on property east of Tasker Road ([See Diagram 1](#)). All soil removal operations were conducted inside the fabric structure. The air treatment system was operated with both carbon filtration beds and blowers during all soil removal operations which were conducted during the hours of 8 to 5 Monday through Friday. Due to the placement of the air treatment system being close to one residence on Tasker, the air blower closest to the residence was turned off at night and on weekends to reduce the amount of noise. The other blower and carbon bed was dedicated to run 24 hours a day, 7 days a week during soil removal and soil backfilling operations. In addition to the air treatment and filtration system, a water truck was used to spray water inside the structure and outside in the fenced area to control dust. In addition, the open area just west of the fence perimeter and the exit road to Sanger Street was watered frequently for dust control.

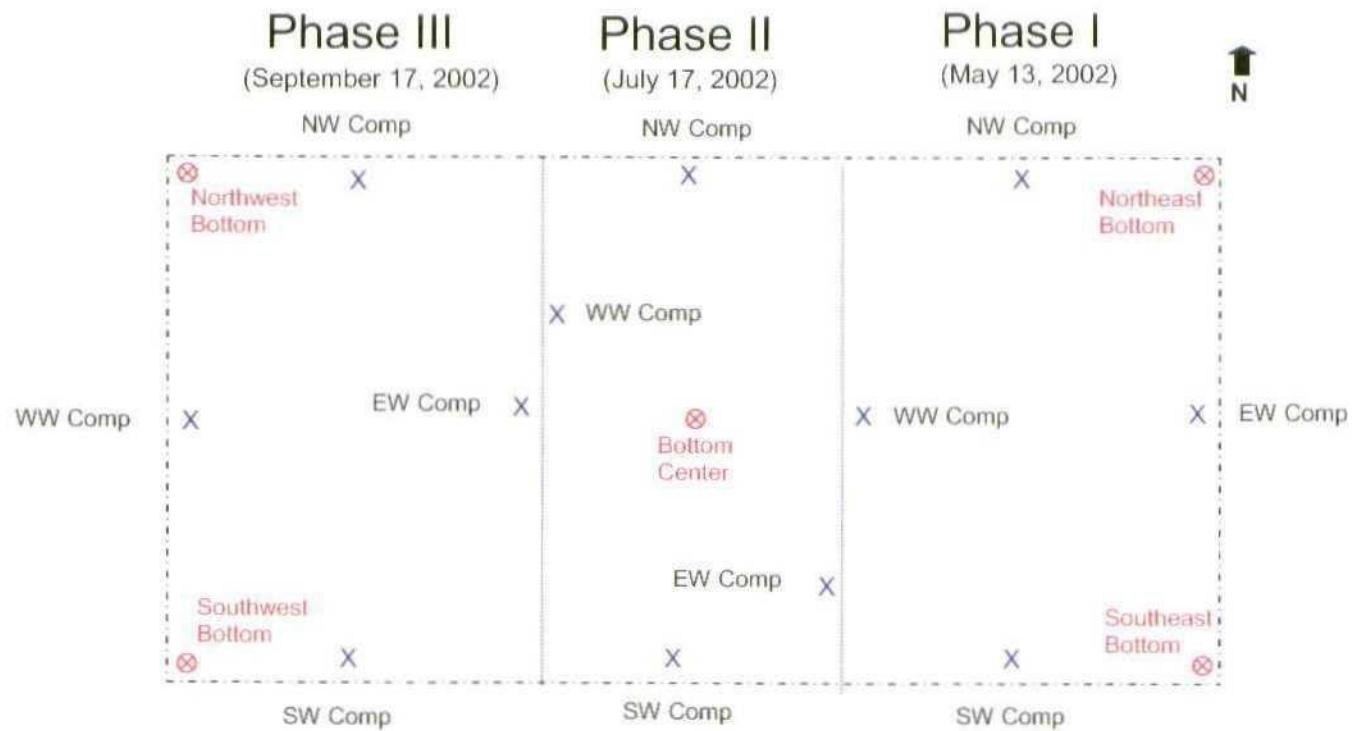

The soil was removed utilizing an excavator and was placed in 22 yard capacity dump trucks. Each truck was tarped before leaving the inside of the fabric structure and then stopped at a tire wash station to wash off the truck and trailer tires before leaving the site. The trucks followed a main caliche road to the south to Sanger Street, then headed west to West County Road, then headed south on the truck by-pass around the south side of Hobbs then to the disposal facility near Eunice, NM. The depth of the soil excavation area was ten (10) to eleven (11) feet below ground surface and approximately 120 feet by 120 feet in size ([See report: Westgate Subdivision, Grimes Battery and Tasker Road, Stage 2 Abatement Plan, May 2000, Section 2.8](#)). A total of 7,010 cubic yards of soil was removed during Phase I. All soils were disposed of at the NMOCD-approved disposal facility owned and operated by Sundance Services in Eunice, NM. All fluids generated from the tire washing activities were also disposed of at the NMOCD-approved disposal facility owned and operated by Sundance Services in Eunice, NM.

After the removal of the soil, confirmation soil samples were taken ([See report: Westgate Subdivision, Grimes Battery and Tasker Road, Stage 2 Abatement Plan, May 2000, Section 2.7](#)). On May 13, 2002, discrete samples were taken in the northeast and southeast bottom and four-point composite samples were taken from each sidewall ([See Diagram 2](#)). The samples were analyzed for TPH, BTEX, and New Mexico Water Quality Control Commission (WQCC) metals using USEPA Methods 418.1, 8260B, and 6010B, respectively. The results of this sampling event are in [Appendix III: Soil Confirmation Sampling Data; Table 1](#). The results met the Stage 2 Abatement Plan approved by the NMOCD on May 2, 2001.

The excavation was then backfilled with 489 cubic yards of red clay creating a liner of approximately one foot in thickness. The clay was compacted using a vibratory compactor. Upon completion of the installation of the clay liner, backfilling of the excavation commenced with 4,460 cubic yards of caliche added and compacted with a vibratory compactor. The final layer of approximately two feet in thickness was backfilled with 1,800 cubic yards of top soil and compacted with a vibratory compactor to the 95 Modified Standard for compaction according to the New Mexico Building Code.

Phase I was completed on May 24, 2002. Photographs of activities conducted during Phase I can be found in [Appendix II: Site Photographs; Phase I](#).

3.4 Phase II – Excavating and Backfilling

Phase II was started on May 28, 2002 with the movement of the air treatment system further to the west to accommodate the movement of the fabric structure. The fabric structure was split in two parts and moved by a 200 ton crane further west to cover the second excavation area and secured in place starting on June 3, 2002 and completed on June 14, 2002. The air system was reconnected to the fabric structure during this time also.

On June 17, 2002, Phase II soil removal operations started on Tasker ([See Diagram 1](#)). This phase included the removal of a portion of Tasker Road. All soil removal operations were conducted inside the fabric structure. The air treatment system was operated with both carbon filtration beds and blowers during all soil removal operations which were conducted during the hours of 8 to 5 Monday through Friday. Due to the placement of the air treatment system being close to one residence on Tasker, the air blower closest to the residence was turned off at night and on weekends to reduce the amount of noise. The other blower and carbon bed was dedicated to run 24 hours a day, 7 days a week during soil removal and soil backfilling operations. In addition to the air treatment and filtration system, a water truck was used to spray water inside the structure and outside in the fenced area to control dust. In addition, the open area just west of the fence perimeter and the exit road to Sanger Street was watered frequently for dust control.

The soil was removed utilizing an excavator and was placed in 22 yard capacity dump trucks. Each truck was covered with a tarp before leaving the inside of the fabric structure and then stopped at a tire wash station to wash off the truck and trailer tires before leaving the site. The trucks followed a main caliche road to the south to Sanger Street, then headed west to West County Road, then headed south on the truck by-pass around the south side of Hobbs then to the disposal facility near Eunice, NM. The depth of the soil excavation area was ten (10) to eleven (11) feet below ground surface and approximately 75 feet by 120 feet in size ([See report: Westgate Subdivision, Grimes Battery and Tasker Road, Stage 2 Abatement Plan, May 2000, Section 2.8](#)). A total of 4,840 cubic yards of soil was removed during Phase II. All soils were disposed of at the NMOCD-approved disposal facility owned and operated by Sundance Services in Eunice, NM. All fluids generated from the tire washing activities were also disposed of at the NMOCD-approved disposal facility owned and operated by Sundance Services in Eunice, NM.

After the removal of the soil, confirmation soil samples were taken ([See report: Westgate Subdivision, Grimes Battery and Tasker Road, Stage 2 Abatement Plan, May 2000, Section 2.7](#)). On July 17, 2002, a discrete sample was taken in the center of the bottom and four-point composite samples were taken from each sidewall ([See Diagram 2](#)). The samples were analyzed for TPH, BTEX, and New Mexico Water Quality Control Commission (WQCC) metals using USEPA Methods 418.1, 8260B, and 6010B, respectively. The results of this sampling event are in [Appendix III: Soil Confirmation Sampling Data; Table 2](#). The results met the Stage 2 Abatement Plan approved by the NMOCD on May 2, 2001.

The excavation was then backfilled with 491 cubic yards of red clay creating a liner of approximately one foot in thickness. The clay was compacted using a vibratory compactor. Upon completion of the installation of the clay liner, backfilling of the excavation commenced with 3,200 cubic yards of caliche added and compacted with a vibratory compactor. The final layer of approximately two feet in thickness was backfilled with 1,500 cubic yards of top soil and compacted with a vibratory compactor to the 95 Modified Standard for compaction according to the New Mexico Building Code.

Phase II was completed on July 25, 2002. Photographs of activities conducted during Phase II can be found in [Appendix II: Site Photographs, Phase II](#).

3.5 Phase III – Excavating and Backfilling

Phase III was started on July 26, 2002 with the reconfiguration of the air treatment system to accommodate the movement of the fabric structure. The fabric structure was split in two parts and moved by a 200 ton crane further west to cover the third excavation area and secured in place starting on August 5, 2002 and completed on August 9, 2002. The air system was reconnected to the fabric structure during this time also.

On August 12, 2002, Phase III soil excavation operations started on property west of Tasker Road ([See Diagram 1](#)). All soil removal operations were conducted inside the fabric structure. The air treatment system was operated with both carbon filtration beds and blowers during all soil removal operations which were conducted during the hours of 8 to 5 Monday through Friday. Due to the placement of the air treatment system being close to one residence on Tasker, the air blower closest to the residence was turned off at night and on weekends to reduce the amount of noise. The other blower and carbon bed was dedicated to run 24 hours a day, 7 days a week during soil removal and soil backfilling operations. In addition to the air treatment and filtration system, a water truck was used to spray water inside the structure and outside in the fenced area to control dust. In addition, the open area just west of the fence perimeter and the exit road to Sanger Street was watered frequently for dust control.

The soil was removed utilizing an excavator and was placed in 22 yard capacity dump trucks. Each truck was tarped before leaving the inside of the fabric structure and then stopped at a tire wash station to wash off the truck and trailer tires before leaving the site. The trucks followed a main caliche road to the south to Sanger Street, then headed west to West County Road, then headed south on the truck by-pass around the south side of Hobbs then to the disposal facility near Eunice, NM. The depth of the soil excavation area was ten (10) to eleven (11) feet below ground surface and approximately 125 feet by 120 feet in size ([See report: Westgate Subdivision, Grimes Battery and Tasker Road, Stage 2 Abatement Plan, May 2000, Section 2.8](#)). A total of 7,298 cubic yards of soil was removed during Phase III. All soils were disposed of at the NMOCD-approved disposal facility owned and operated by Sundance Services in Eunice, NM. All fluids generated from the tire washing activities were also disposed of at the NMOCD-approved disposal facility owned and operated by Sundance Services in Eunice, NM.

After the removal of the soil, confirmation soil samples were taken ([See report: Westgate Subdivision, Grimes Battery and Tasker Road, Stage 2 Abatement Plan, May 2000, Section 2.7](#)). On September 17, 2002, discrete samples were taken in the northwest and southwest bottom and four-point composite samples were taken from each sidewall ([See Diagram 2](#)). The samples were analyzed for TPH, BTEX, and New Mexico Water Quality Control Commission (WQCC) metals using USEPA Methods 418.1, 8260B, and 6010B, respectively. The results of this sampling event are in [Appendix III: Soil Confirmation Sampling Data; Table 3](#). The results met the Stage 2 Abatement Plan approved by the NMOCD on May 2, 2001.

The excavation was then backfilled with 646 cubic yards of red clay creating a liner of approximately one foot in thickness. The clay was compacted using a vibratory compactor. Upon completion of the installation of the clay liner, backfilling of the excavation commenced with 2,940 cubic yards of caliche added and compacted with a vibratory compactor. The final layer of approximately three feet in thickness was backfilled with 4,560 cubic yards of top soil and compacted with a vibratory compactor to the 95 Modified Standard for compaction according to the New Mexico Building Code.

Phase III was completed on October 1, 2002. A total of 19,148 cubic yards of soil was disposed of and a total of 20,086 cubic yards of clay and backfill was used at the site. Photographs of activities conducted during Phase III can be found in [Appendix II: Site Photographs; Phase III](#).

3.6 Westgate Site Dismantle

The dismantling and restoration of the site started on October 2, 2002 and was completed on December 12, 2002. The air treatment system, sound barriers, and associated electrical equipment were disassembled starting on October 2, 2002 and the fabric structure was dismantled starting on October 11, 2002. These activities were completed on October 19, 2002. The rest of the site dismantle and restoration including the removal of office trailers, tire wash station, fencing, replacement of the portion of Tasker Road and sidewalks, removal of street barricades, and other site materials was completed in mid-November 2002 ([See Appendix II: Site Photographs; Structure Dismantle](#)). The entire site was smoothed, contoured, and compacted in early December. All site activities were completed by mid-December 2002 ([See Appendix II: Site Photographs; Completed Site](#)).

4.0 HEALTH, SAFETY, AND AIR MONITORING PLAN

As part of the Stage 2 Abatement Plan, a comprehensive health and safety plan was created to monitor the health and safety of the site personnel during the soil remediation activities. In addition, an on-site and off-site site perimeter air monitoring plan was created ([See report: Westgate Subdivision, Grimes Battery and Tasker Road, Stage 2 Abatement Plan, May 2000, Appendix III](#)). This plan was developed to insure all site personnel followed the safety procedures developed specifically for the site and to monitor the air quality in and around the site and the Westgate neighborhood that may be impacted by site operations.

4.1 Safety

Prior to each day's site activities, a safety meeting was conducted by the on-site safety director for all personnel working on the site. Topics of concern, site specific operations, and other general safety factors were discussed among all personnel. During the course of site operations, there were no near misses, incidents, or accidents among any personnel working on the site.

4.2 Stationary Air Monitoring – PM₁₀

As previously mentioned, another part of the Health, Safety, and Air Monitoring Plan was air monitoring activities. This plan was designed to monitor the air quality on the site, the outer perimeter, and areas around the neighborhood. A general plan was created and reported in the Stage 2 Abatement Plan of May 2000, but the final plan was developed once the Phase I air monitoring ([See report: Characterization Of Potential Air Emissions Associated With Remediation Activities Near The Westgate Subdivision, Phase I Final Air Monitoring Report, March 2002](#)) results were reviewed.

There were two parts of the air monitoring program. The first part, conducted by URS Corporation, was the installation of two PM₁₀ monitoring stations and a meteorological monitoring station. This part of the air monitoring program is referred to as Phase II; with Phase I being the monitoring previously discussed in the above mentioned report. The objective of the Phase II monitoring was to monitor particulate matter concentrations at the site during remediation activities. The data was used to modify site activities or institute other control mechanisms, as appropriate, to maintain PM concentrations below a predetermined threshold value.

Ambient measurements began in March of 2002 and continued throughout the remediation with the exception of an approximate two week period in early June when the stations and excavation structure were being relocated. The particulate monitoring was conducted using a Ruppercht and

Patashnick TEOM monitor. This unit has U.S. EPA equivalency for PM₁₀ monitoring (EQPM-1090-079). The meteorological monitoring sensors were manufactured by MetOne instruments and met all U.S. EPA requirements for PSD monitoring.

The pre-determined threshold value used in this monitoring is the U.S. EPA National Ambient Air Quality Standard (NAAQS) for 24-hour PM₁₀ of 150 µg/m³. During the 181 days of monitoring this threshold was exceeded at the East site on five days and was not exceeded at the South site. The five exceedence days were caused by high winds causing off-site dust to pass through the site, off-site occurrences such as a City of Hobbs street sweeper passing by the PM₁₀ station causing dust clouds that were registered by the instruments, and normal site activities ([See Appendix II: Site Photographs; Phase I; Pictures No. 31 & 32; Appendix IV: Results Of Particulate Measurements Made During Remediation Activities Near The Westgate Subdivision, Phase II Air Monitoring Report, March 2003](#), pages 3-2 and 3-3; [Appendix IV: Results Of Particulate Measurements Made During Remediation Activities Near The Westgate Subdivision, Phase II Air Monitoring Report, March 2003](#), last section, Operations Log, last 4 pages).

For greater detail of the PM₁₀ monitoring activities, please see [Appendix IV: Results Of Particulate Measurements Made During Remediation Activities Near The Westgate Subdivision, Phase II Air Monitoring Report, March 2003](#).

4.3 Walk-A-Round Air Monitoring

The second part of the air monitoring program was the walk-a-round monitoring of the ambient air both on-site and off-site during site activities only. The air monitoring was conducted using specialized hand-held instruments. These types of instruments were the same used during the flux chamber air testing that was conducted in the Phase I air monitoring in July 2001. **Table 1** below is a list of the instruments used during the remediation activities and what air constituents each one was calibrated to detect:

Table 1: Air Monitoring Instruments

INSTRUMENT	CONSTITUENT
Foxboro TVA 1000	Volatile Organic Compounds PID/FID - ppm
Mini RAE 2000	Volatile Organic Compounds PID/FID - ppm
Jerome 431-X	Mercury - Hg Mg/m ³
Jerome 631-X	Hydrogen Sulfide - H ₂ S ppm
Gastech GT 201	%LEL; ppm; %O ₂
MIE PDR 1000	Dust - Mg/m ³

During the soil remediation activities, twice daily walk-a-round air monitoring was conducted at five sites that were off-site and outside of the fence perimeter using the above mentioned hand-held instruments ([See Appendix V: Westgate Walk-A-Round Air Monitoring](#)). Two of these monitoring sites were located in the vicinity of the previous sites that had stationary air monitoring stations during the Phase I air monitoring activities in July 2001. These sites were located near 1701 San Andres, northeast of the work site, and 1412 Berry, east of the work site. Additional off-site monitoring points were located just south of the site on Tasker Street at the bus turn-a-round that was built due to the closure of Tasker Street for the remediation, on the north side of the perimeter near 1401 Tasker, and west of the site entrance near the location of the groundwater monitor well GMW-10.

There were five other monitoring points inside the site perimeter. One point was near groundwater monitor well GMW-7 (monitored twice daily), which is located to the south of the excavation area and the others were the inlet and outlet sample ports of the two carbon air purification beds and inside the

fabric structure. The inside of the structure, the inlets, and the outlets of the carbon beds were monitored once a day at the end of each day's activities ([See Appendix V: Westgate Walk-A-Round Air Monitoring](#)).

The results of the walk-a-round air monitoring did not indicate any detections over the thresholds outlined in the air monitoring plan ([See report: Westgate Subdivision, Grimes Battery and Tasker Road, Stage 2 Abatement Plan, May 2000, Appendix III, Sections 10.2.3, 10.2.4, 10.3, and 10.3.1, pages 10-2 – 10-10](#)). Since there were no detections above the thresholds, no response action or adjustments were necessary.

5.0 RECOMMENDATION

With the submission of this report, Shell Exploration and Production Company (Shell E & P) respectfully requests the concurrence of the NMOCD that the requirements of the Westgate Subdivision, Grimes Battery and Tasker Road, Stage 2 Abatement Plan are completed, except for the requirements relating to groundwater. The remaining activities relating to groundwater will continue until the requirements of the NMOCD have been met. All activities associated with groundwater will continue to be reported in the annual groundwater reports submitted to the NMOCD.

Analytical and Quality Control Report

Cliff Brunson
BBC International Inc.
P.O. Box 805
Hobbs, NM 88241

Report Date: September 26, 2001

Order ID Number: A01092001

Project Number: N/A
Project Name: Shell Westgate
Project Location: Hobbs, NM

Enclosed are the Analytical Results and Quality Control Data Reports for the following samples submitted to TraceAnalysis, Inc.

Sample	Description	Matrix	Date Taken	Time Taken	Date Received
179672	GBN-13P	Soil	9/18/01	17:00	9/19/01
179673	GBN-14P	Soil	9/18/01	17:10	9/19/01
179674	GBN-16P	Soil	9/18/01	17:17	9/19/01
179675	GBN-17P	Soil	9/18/01	17:20	9/19/01
179676	GBN-18P	Soil	9/18/01	17:32	9/19/01

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 7 pages and shall not be reproduced except in its entirety including the chain of custody (COC), without written approval of TraceAnalysis, Inc.

Dr. Blair Leftwich, Director

Percent recovery is based on the spike result. RPD is based on the spike and spike duplicate result.

Surrogate	MS Result	MSD Result	Units	Dilution	Spike Amount	MS % Rec	MSD % Rec	Recovery Limits
Dibromofluoromethane	50.4	50.8	µg/Kg	1	50	100	101	90 - 112
Toluene-d8	50.3	50.7	µg/Kg	1	50	100	101	91 - 107
4-Bromofluorobenzene	50.9	50.0	µg/Kg	1	50	101	100	83 - 110

Analytical and Quality Control Report

Cliff Brunson
BBC International Inc.
P.O. Box 805
Hobbs, NM 88241

Report Date: October 4, 2001

Order ID Number: A01092701

Project Number: N/A
Project Name: Shell Westgate
Project Location: Hobbs, NM

Enclosed are the Analytical Results and Quality Control Data Reports for the following samples submitted to TraceAnalysis, Inc.

Sample	Description	Matrix	Date Taken	Time Taken	Date Received
180301	GBN-19	Soil	9/25/01	16:50	9/26/01
180302	GBN-20	Soil	9/25/01	16:56	9/26/01
180303	GBN-21	Soil	9/25/01	17:05	9/26/01
180304	GBN-22	Soil	9/25/01	17:11	9/26/01
180305	GBN-23	Soil	9/25/01	17:15	9/26/01
180306	GBN-24	Soil	9/25/01	17:30	9/26/01
180307	GBN-25	Soil	9/25/01	17:37	9/26/01
180308	GBN-26	Soil	9/25/01	17:45	9/26/01

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 20 pages and shall not be reproduced except in its entirety including the chain of custody (COC), without written approval of TraceAnalysis, Inc.

APPENDIX II

Site Photographs
Structure Assembly
March 2002

**Westgate Stage 2 Abatement Plan-
Remediation Activities Report
Hobbs, New Mexico**

Prepared for:
Shell Exploration & Production Company
Houston, Texas

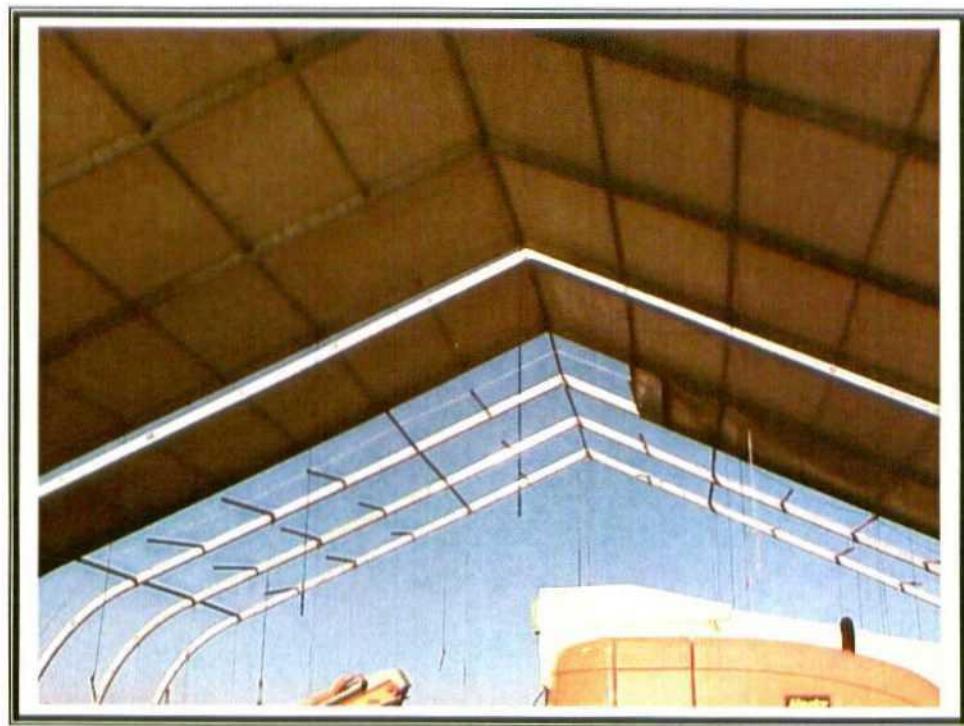

May 2003

Prepared by:
BBC International, Inc.

Structure Assembly

1. Structure ribs are raised and bolted in place.

2. View from inside structure. A panel of fabric is being guided up the structure ribs.

Structure Assembly

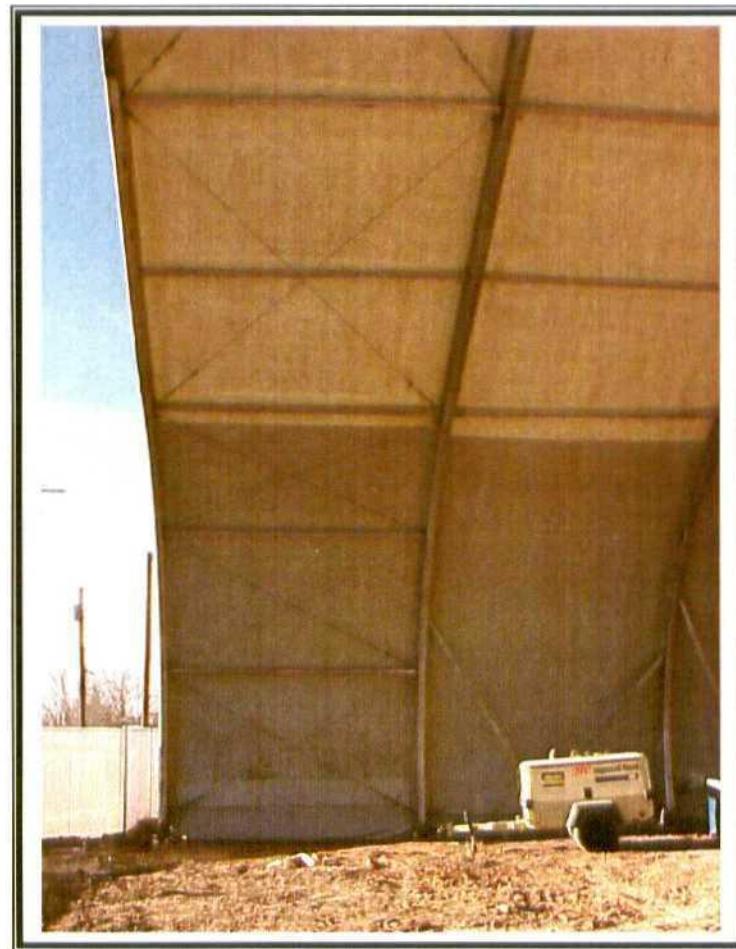

3. View from inside of structure.

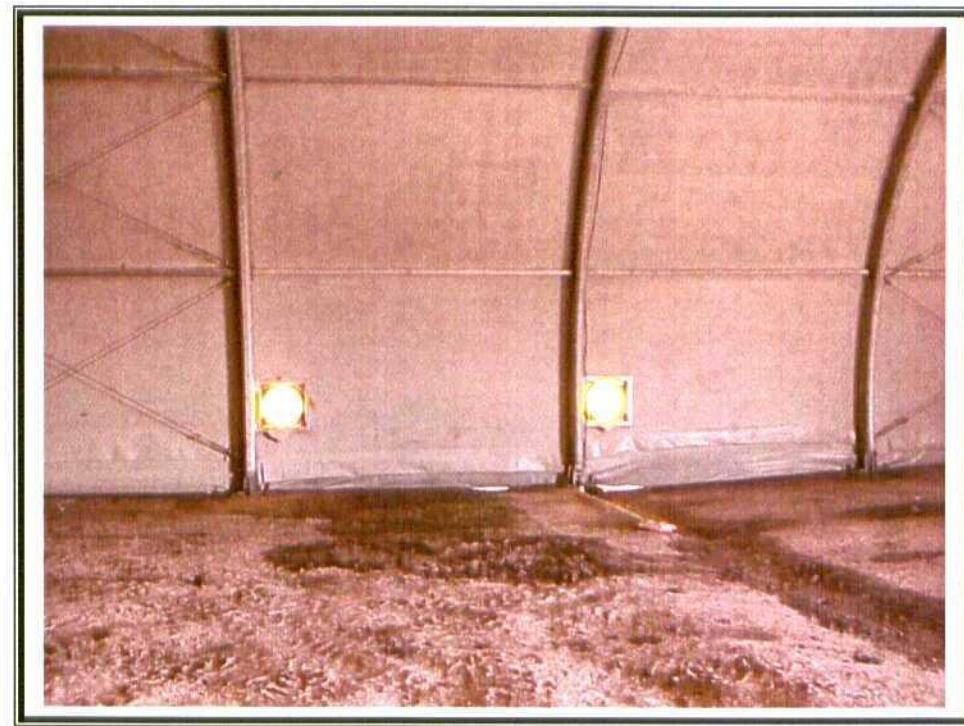

4. Electrician wiring structure lighting.

Structure Assembly

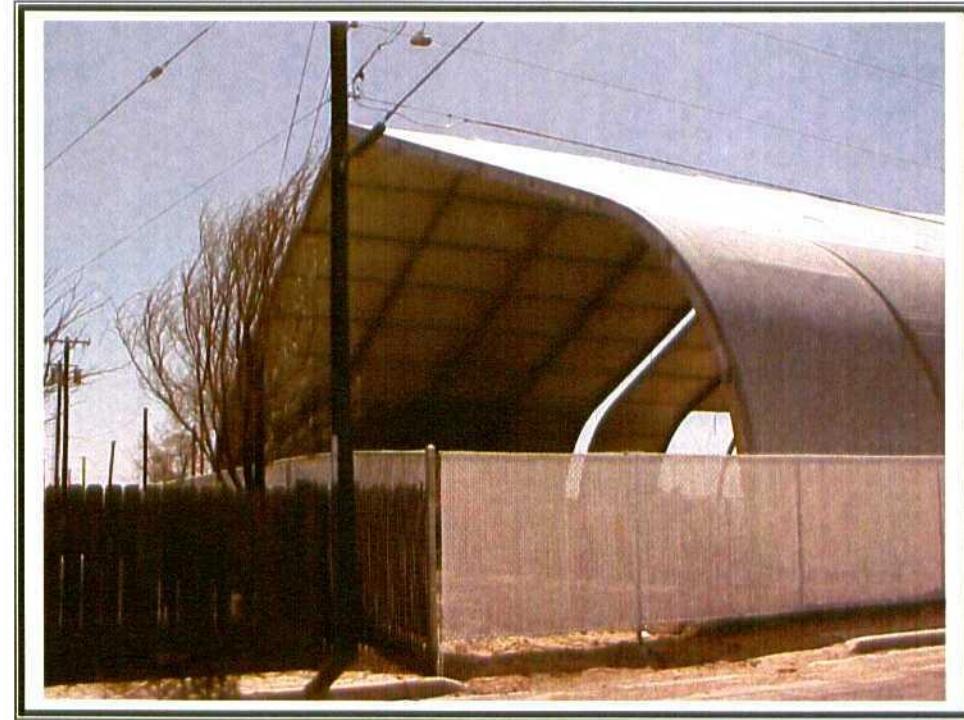

5. View from inside structure facing north wall. Cross beams and tension cables have been secured on first section.

Structure Assembly

6. Air intake inlets that lead to carbon filtration system.

7. Rear view of structure from the corner of San Andres.

Structure Assembly

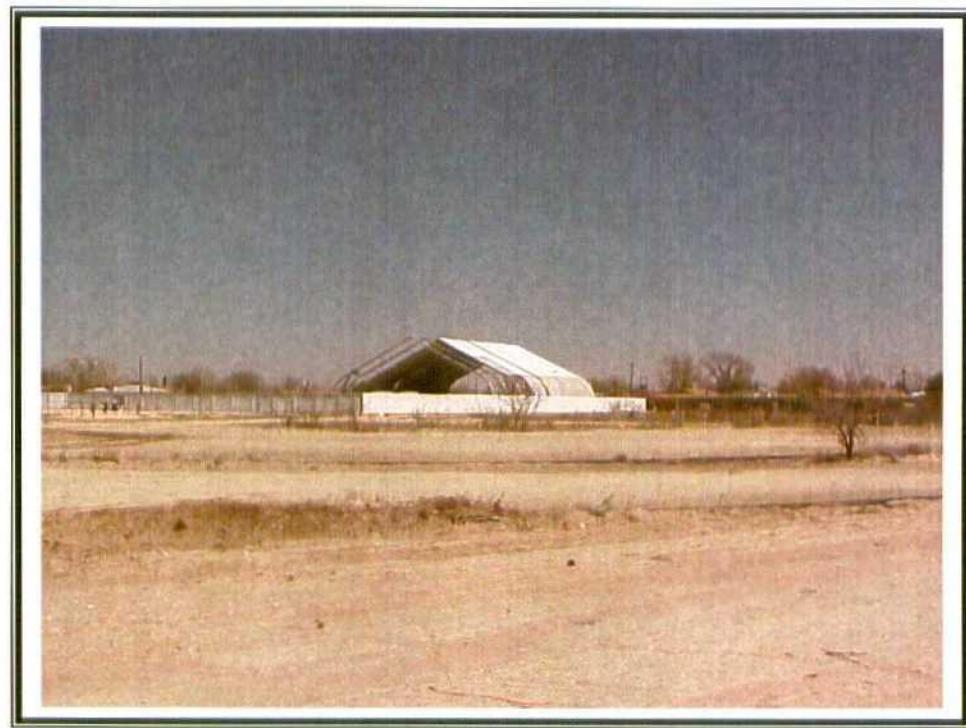

8. Rear view of structure from San Andres.

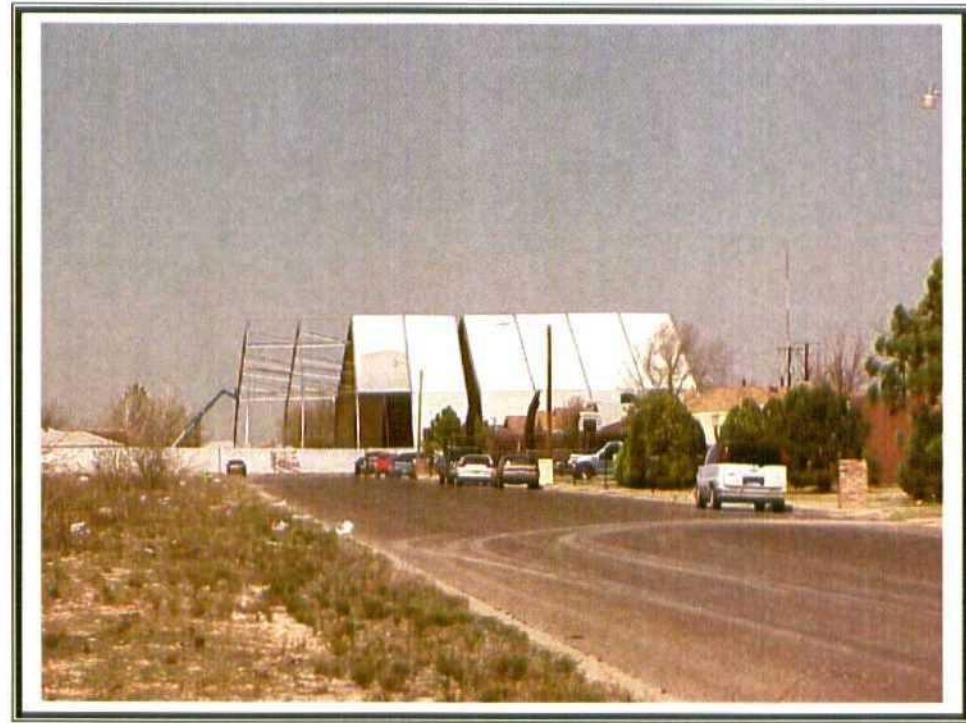

9. View of structure assembly from North Tasker Street.

Structure Assembly

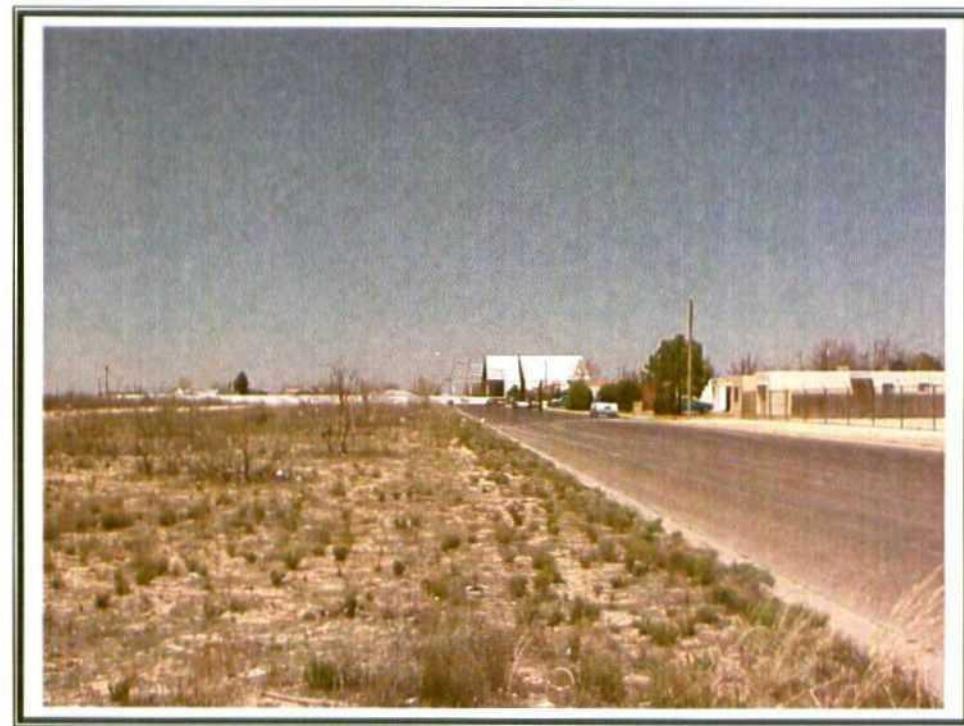

10. View of structure from nearby field.

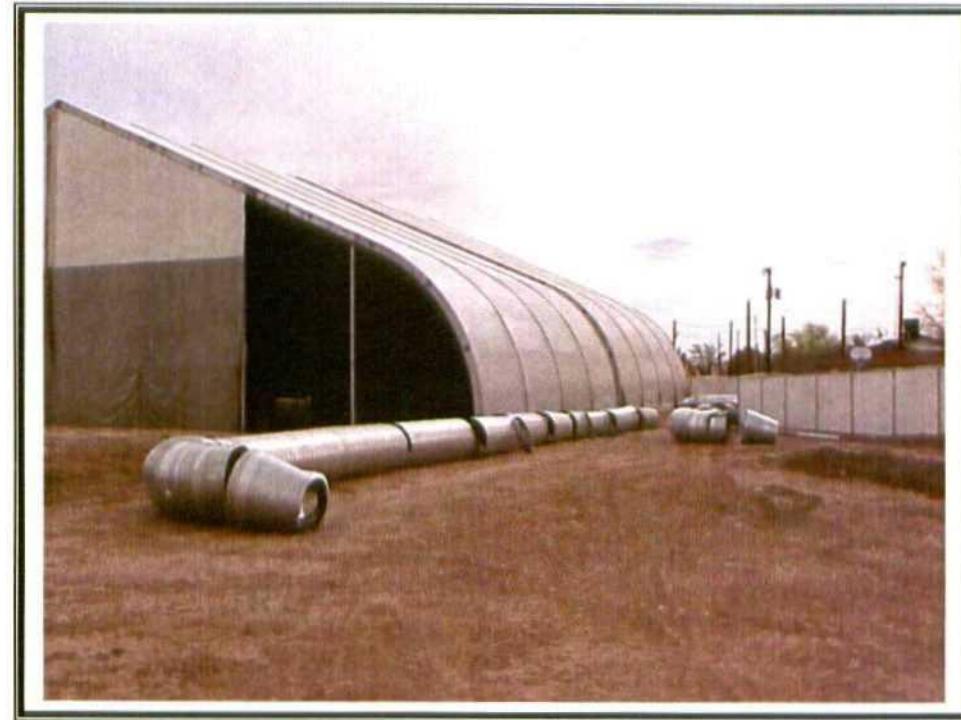

11. View of structure assembly from South Tasker.

Structure Assembly

12. Distant view from South Tasker.

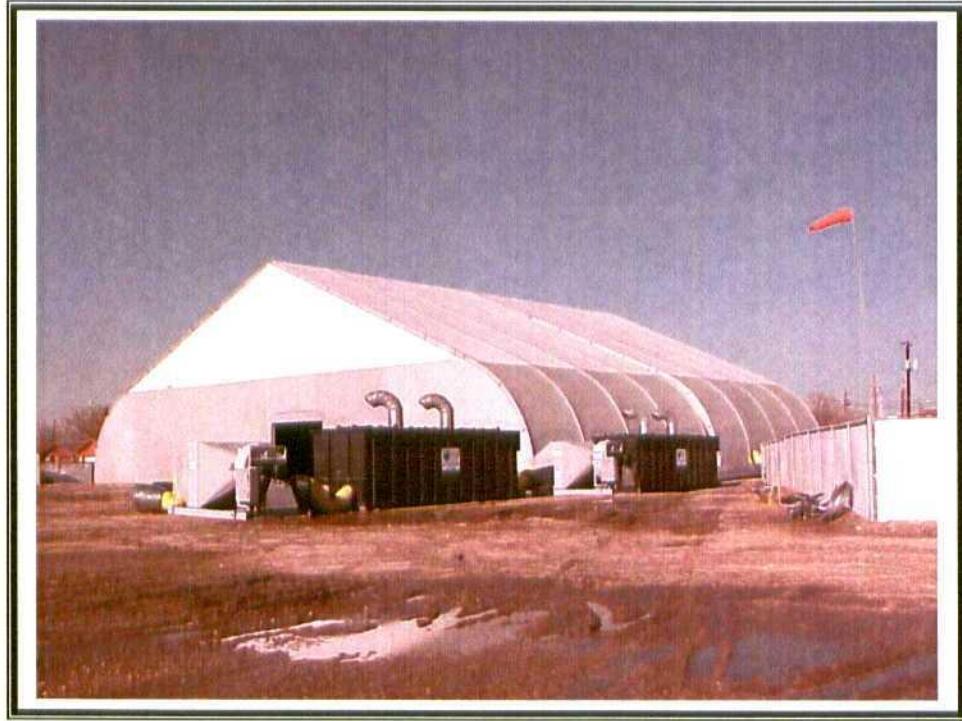

13. One structure panel left to be installed. Duct work for carbon filtration system is being assembled.

Structure Assembly

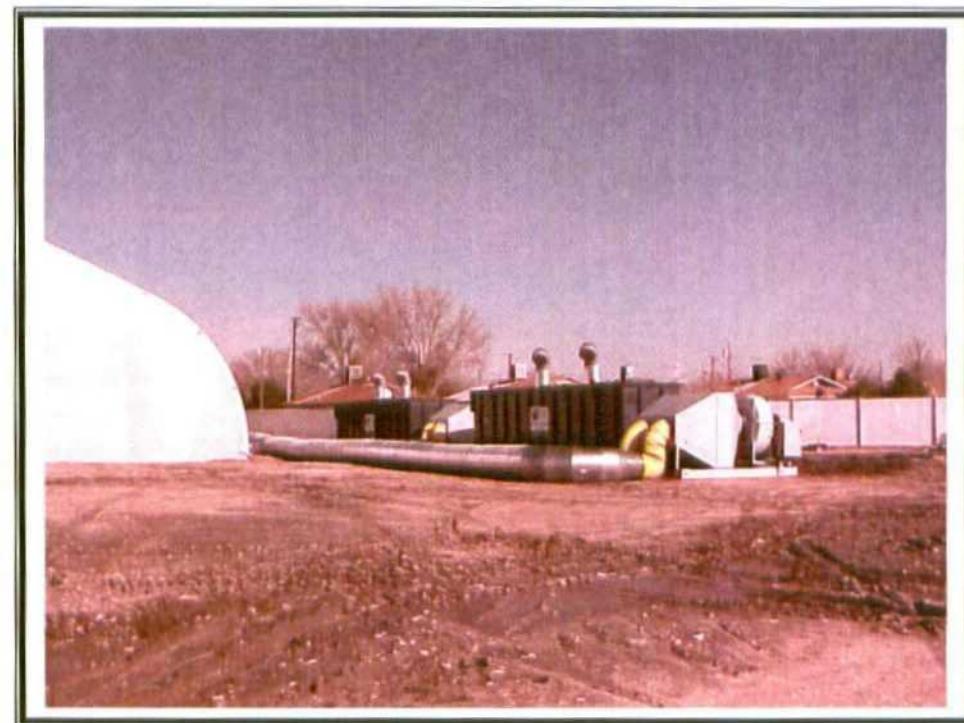

14. Assembling duct work for carbon filtration system.

15. Structure and carbon filtration system assembly complete.

Structure Assembly

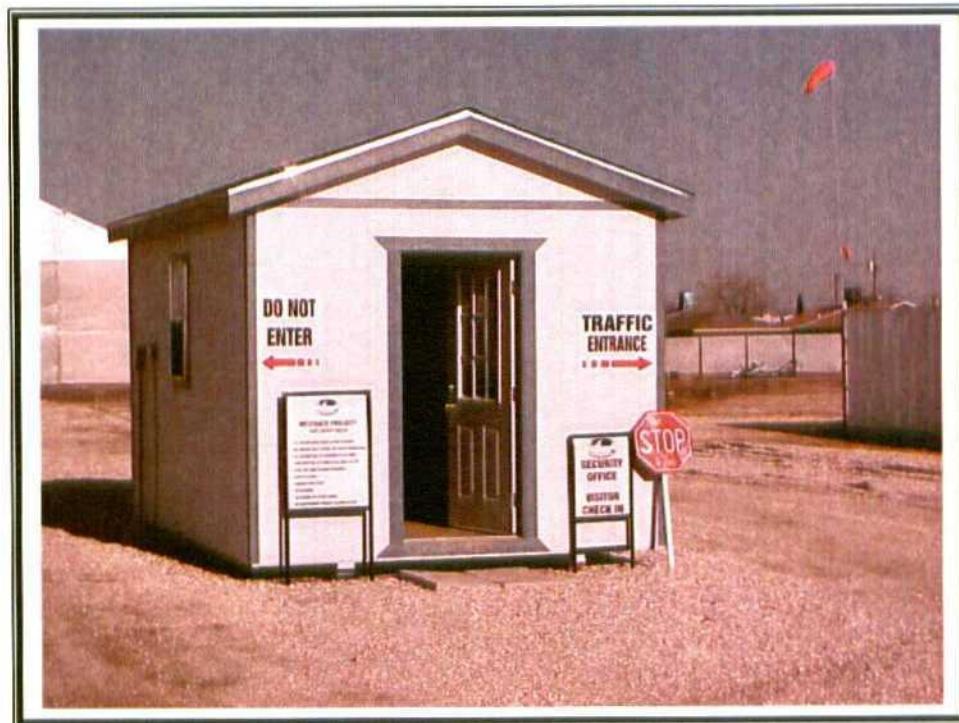

16. Carbon Filtration Unit.

17. Bus turnaround at South Tasker.

Structure Assembly

18. Site Security office and visitor check – in.

19. Project identification sign at site entrance and designated smoking area.

11. Phase I Excavation – Truck hauling soil out of structure

12. Phase I Excavation – ramp used to back into structure

Phase I

13. Phase I Excavation – Excavator loading dump truck

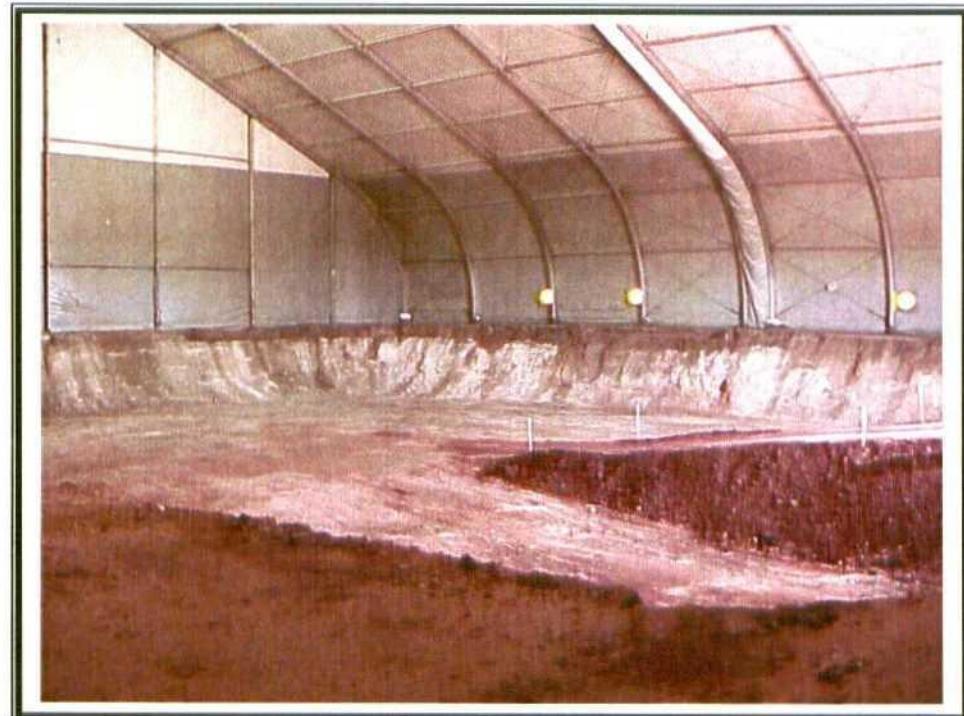

14. Phase I Excavation – Dump truck loading at bottom of excavated area

Phase I

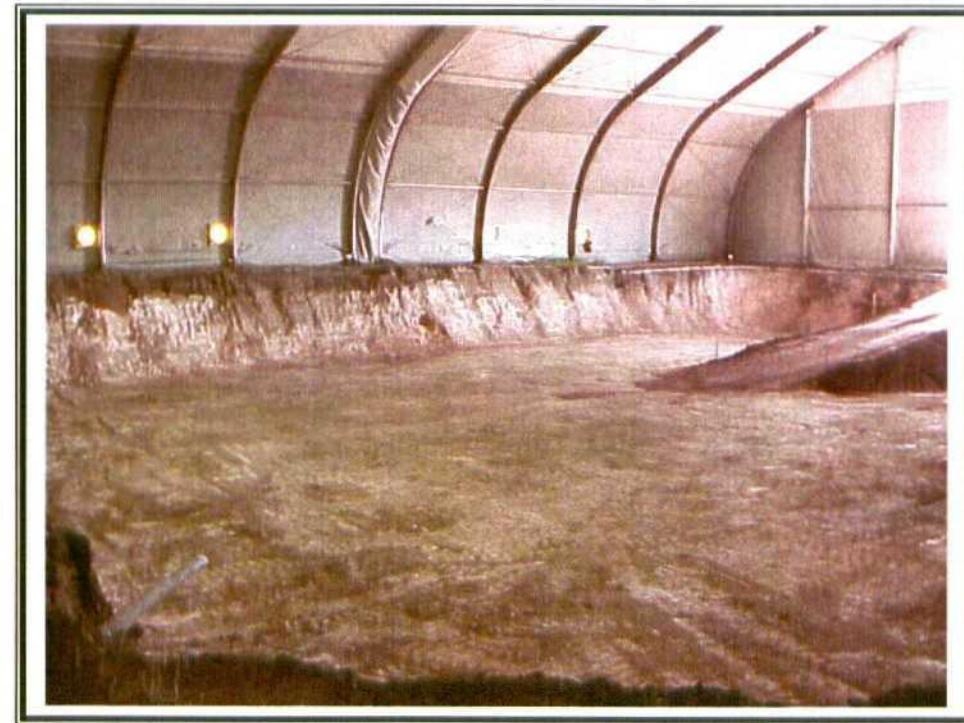

15. Phase I Excavation – Bottom hole

16. Phase I Excavation – Bottom hole and clay ramp

Phase I

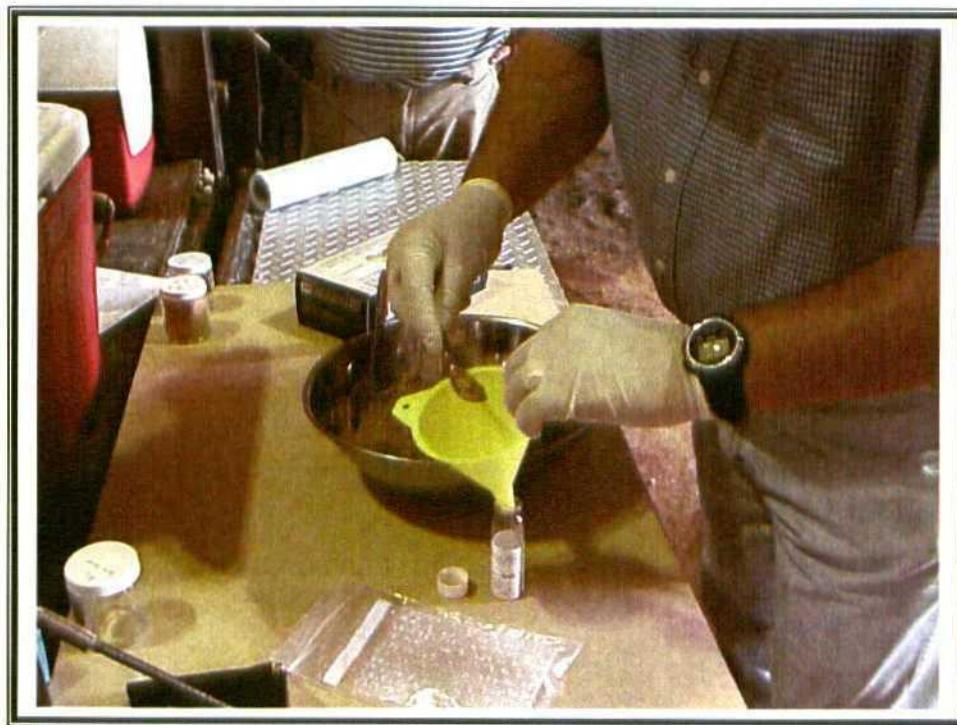

17. Phase I Excavation – Bottom hole

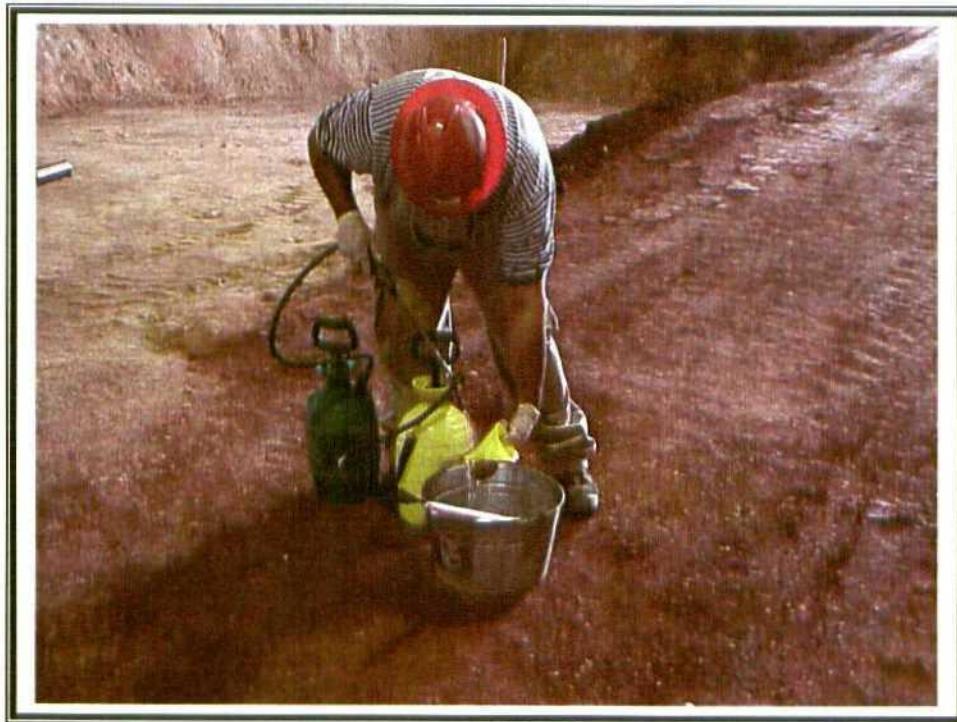

18. Phase I – Confirmation Sampling. Orange flag marks sample points on east wall and one at ground level.

Phase I

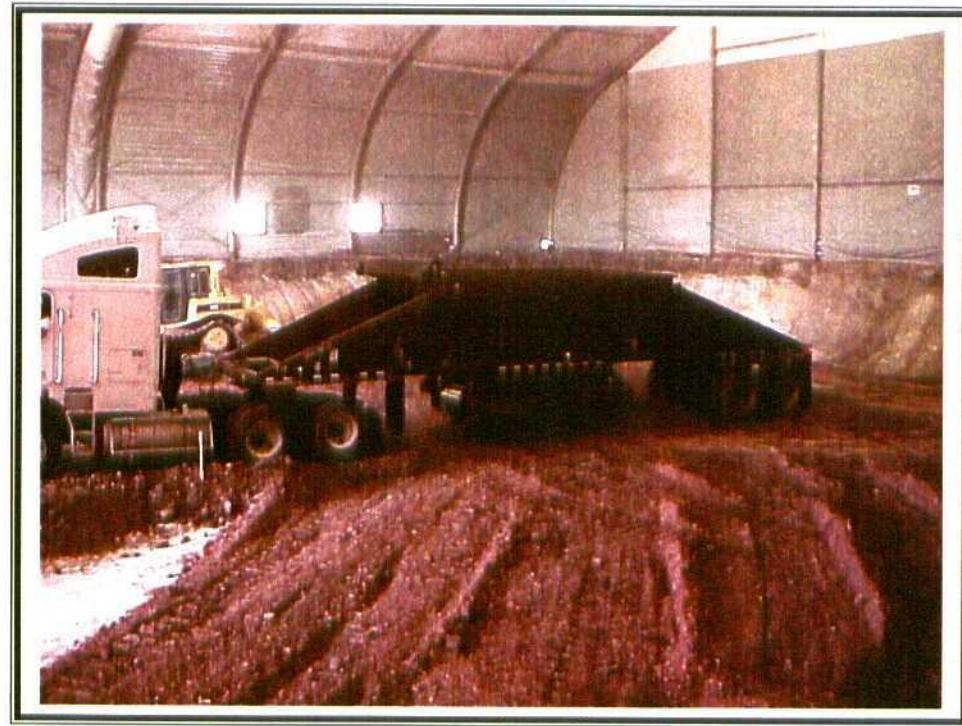

19. Phase I – Confirmation Sampling. Filling sample jar with composite soil sample.

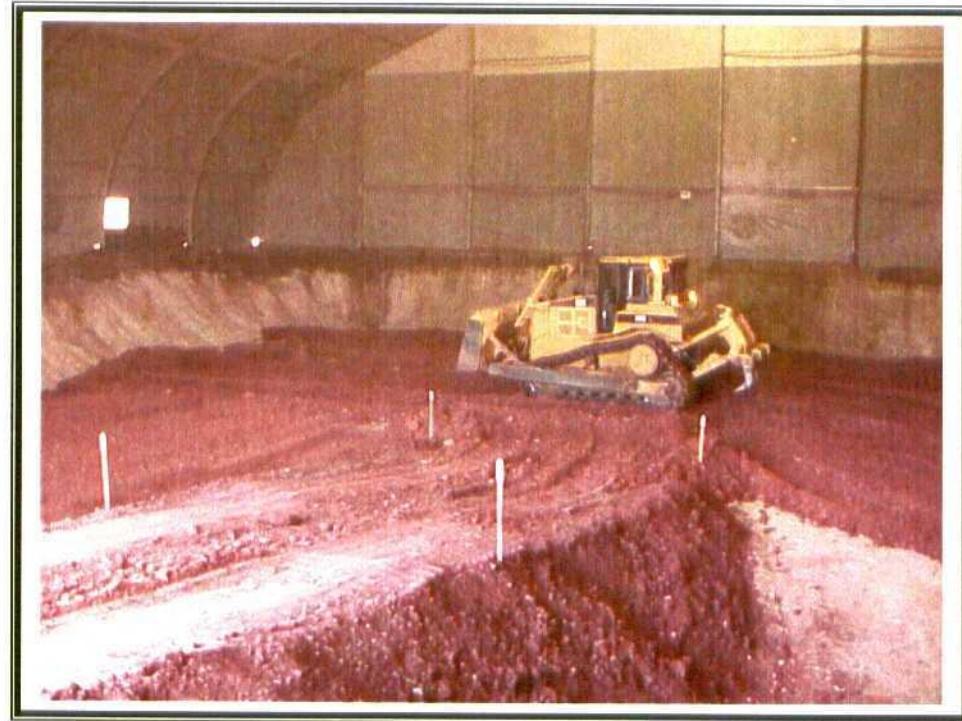

20. Phase I – Confirmation Sampling. Technician performing decontamination procedures on sampling tools.

Phase I

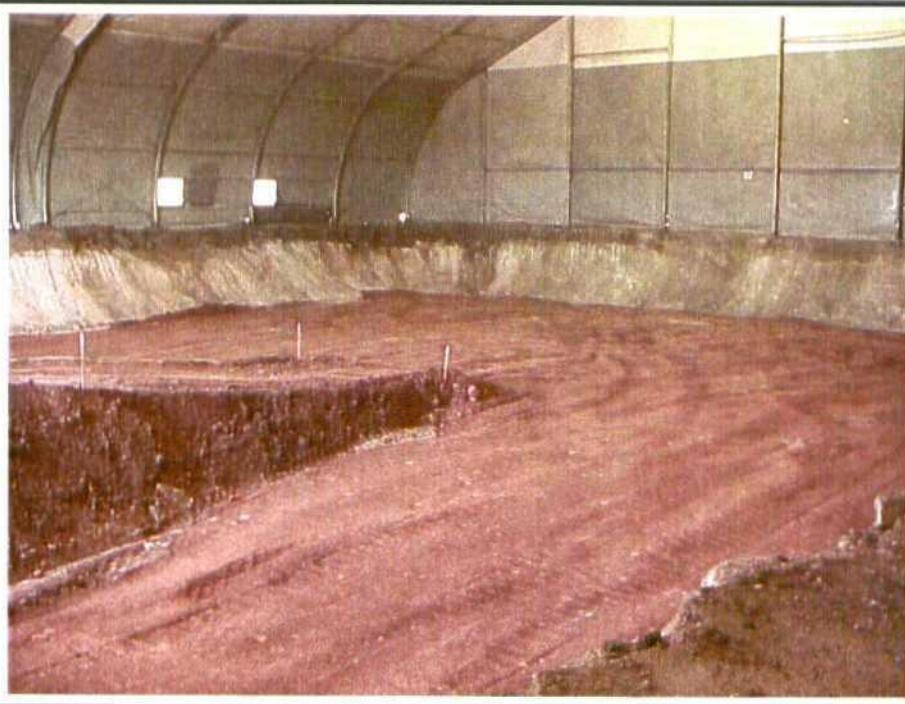

21. Phase I – Backfilling. Dump truck dumping a load of clay at bottom of excavated area.

22. Phase I – Backfilling. Dozer leveling clay liner.

Phase I

23. Phase I – Backfilling. Clay liner.

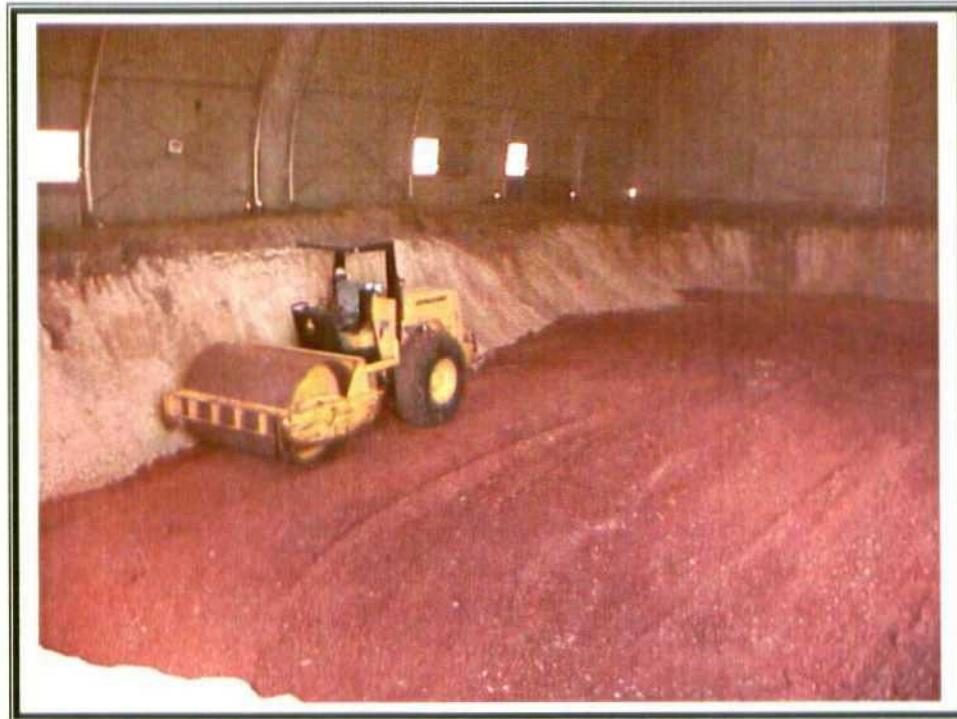

24. Phase I – Backfilling. Watering down clay to minimize dust.

Phase I

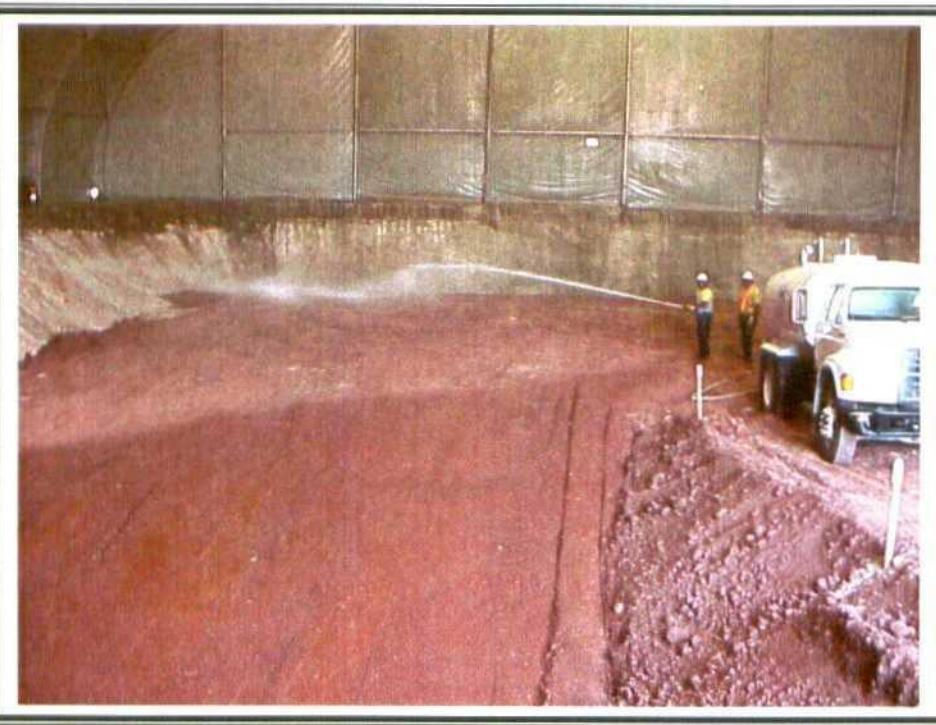

25. Phase I – Backfilling. Truck loading up clay to dump inside structure for clay liner.

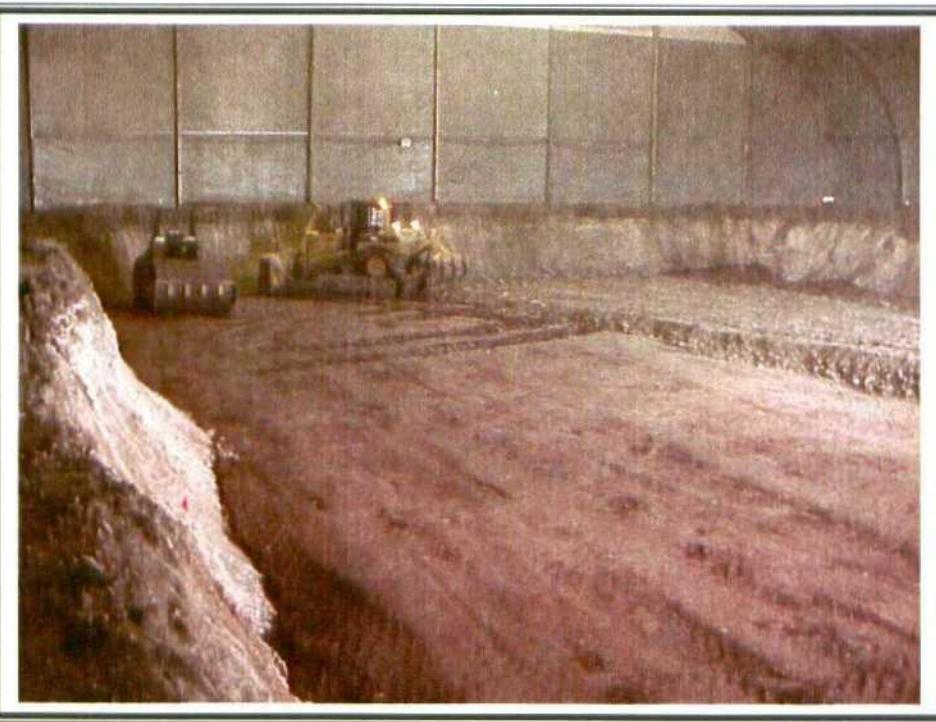

26. Phase I – Backfilling. Roller packing down clay liner.

Phase I

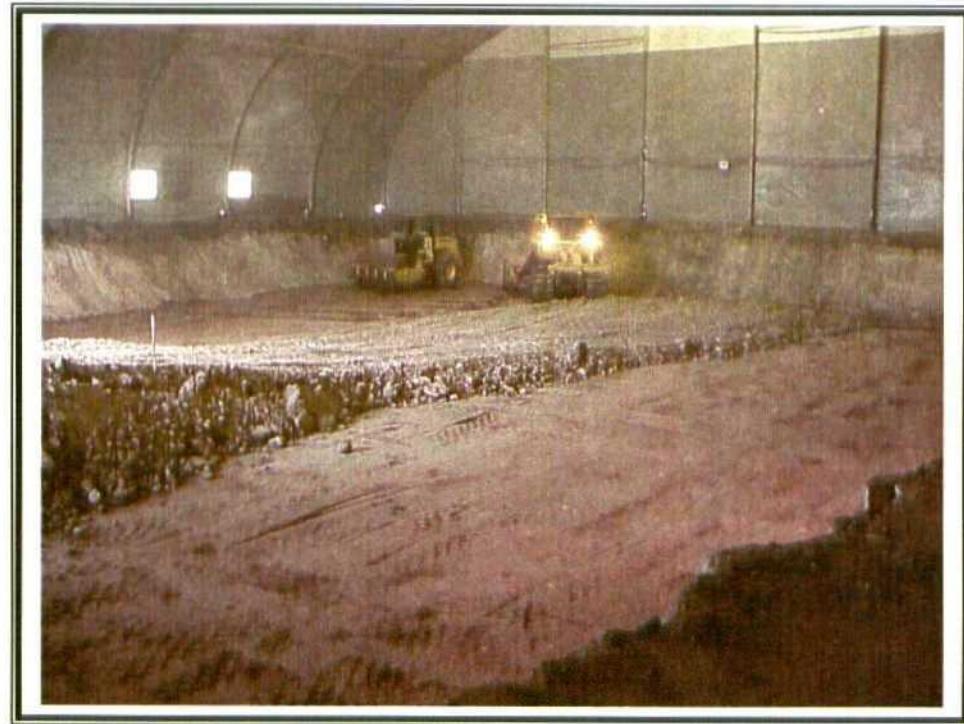

27. Phase I – Backfilling. Watering down clay liner inside structure.

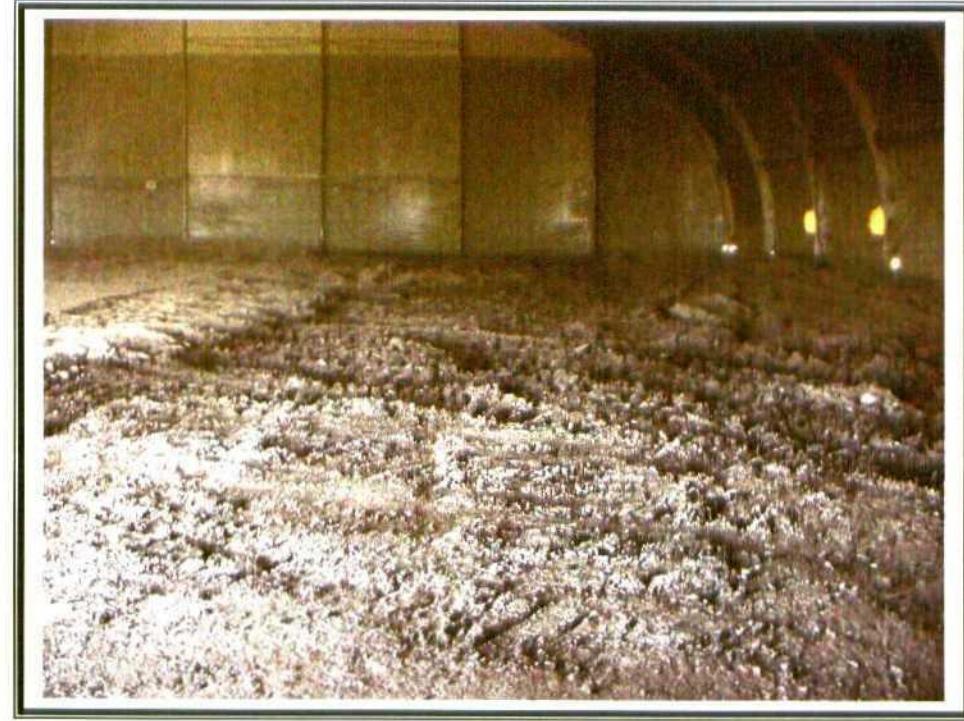

28. Phase I – Backfilling. Dozer and vibratory roller spreading caliche backfill.

Phase I

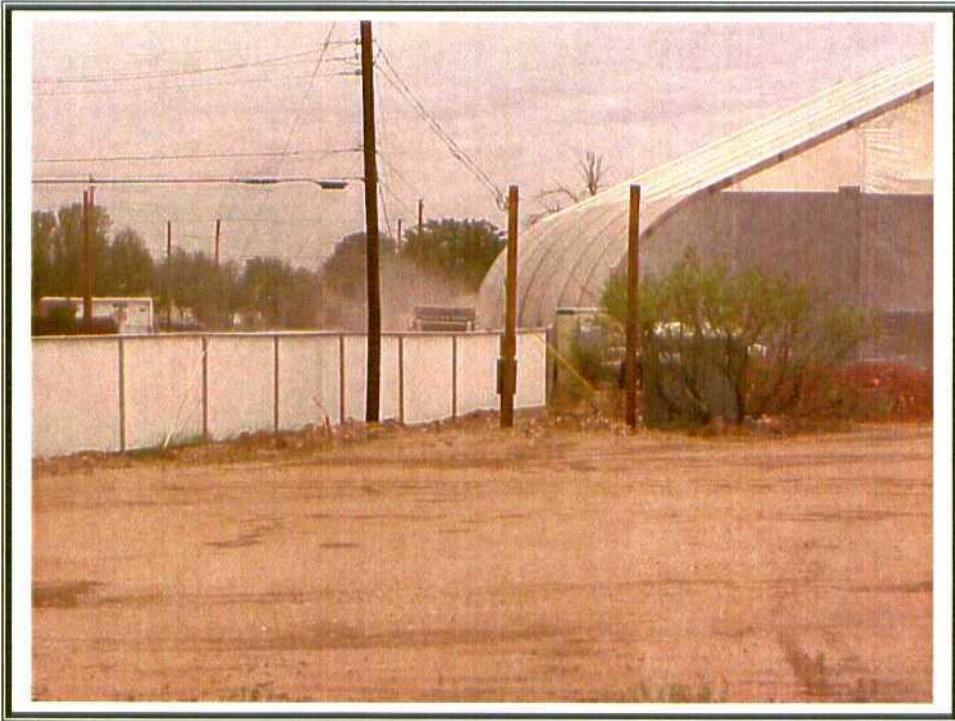

29. Phase I – Backfilling. Dozer and vibratory roller spreading caliche backfill.

30. Phase I – Backfilling. Final stage of backfill (topsoil).

Phase I

31. Phase I – Backfilling. City of Hobbs street sweeper off site on Berry Drive.

32. Phase I – Backfilling. City of Hobbs street sweeper off site on Berry Drive.

33. Phase I – Backfilling. Watering site to minimize dust.

Phase II
June – August 2002

**Westgate Stage 2 Abatement Plan-
Remediation Activities Report
Hobbs, New Mexico**

Prepared for:
Shell Exploration & Production Company
Houston, Texas

May 2003

Prepared by:
BBC International, Inc.

1. First Structure Move. Crane supporting manlift while structure crew secure support beams.

2. Structure Move. Perspective photo of crane and manlift.

Phase II

3. Structure Move. Perspective photo of structure and crane from neighborhood.

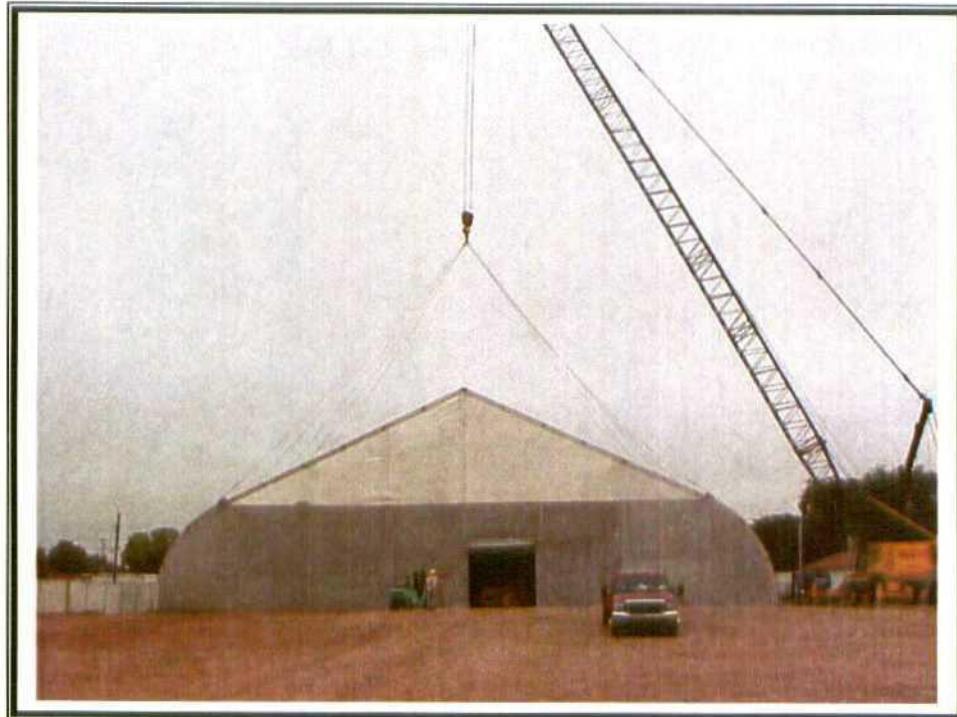

4. Universal Fabric Structure crewman working inside structure preparing for structure move.

Phase II

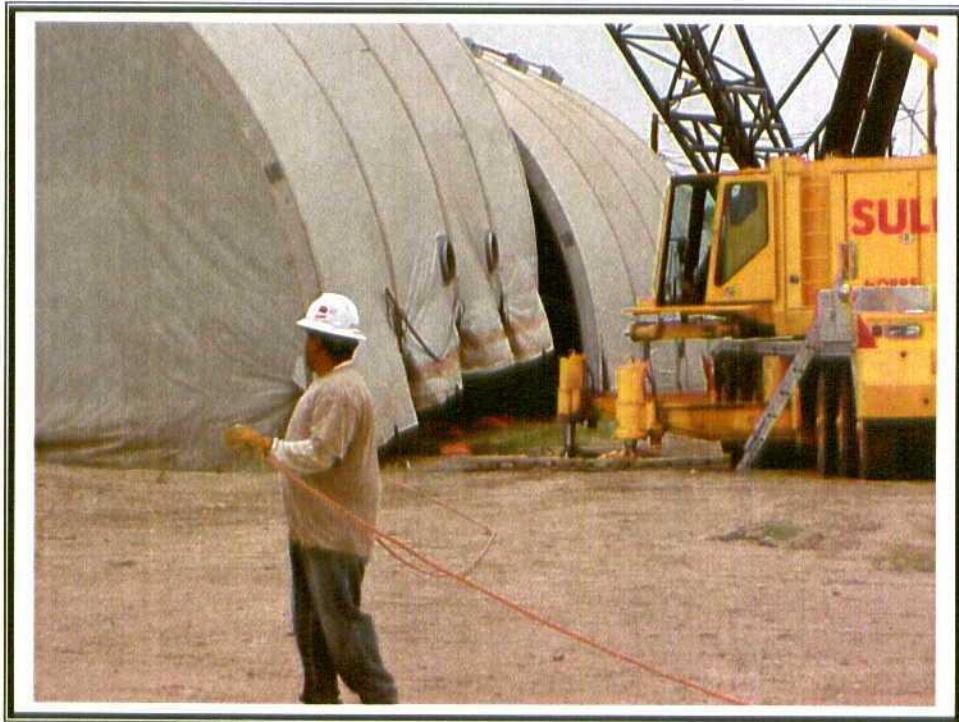

5. Universal Fabric Structure crewman securing support beams in preparation for structure move.

6. Rigging up crane cables to lift structure.

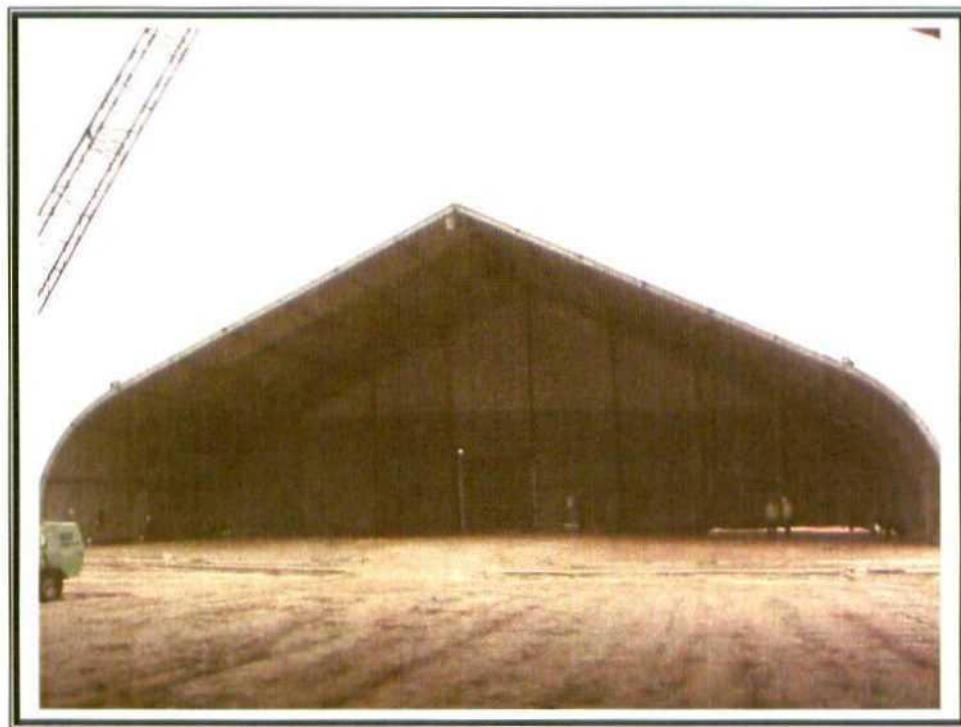

Phase II

7. Ropes tied to corners of structure were used to minimize swaying motion.

8. First half of structure off the ground and moving slowly forward.

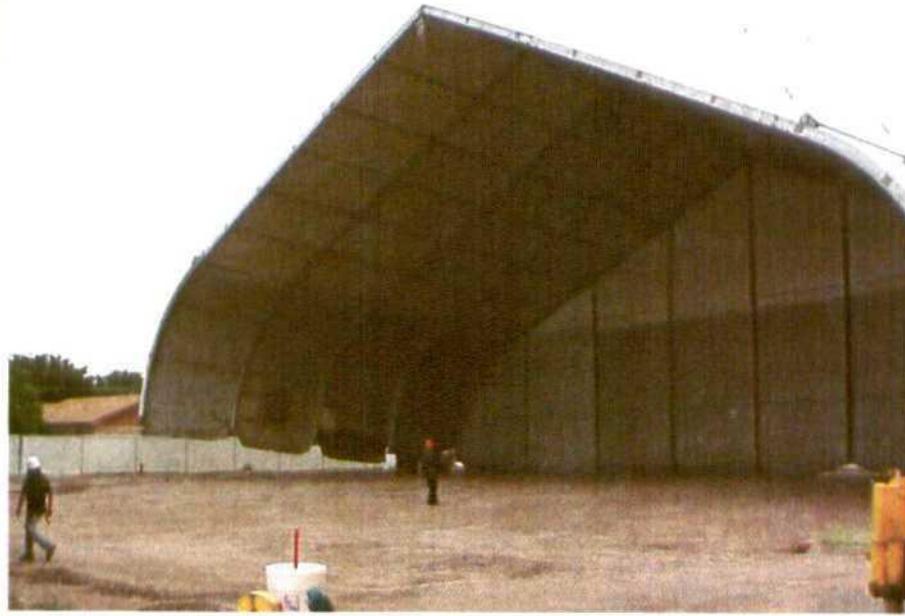

9. Rear view of the first half of the structure after being moved.

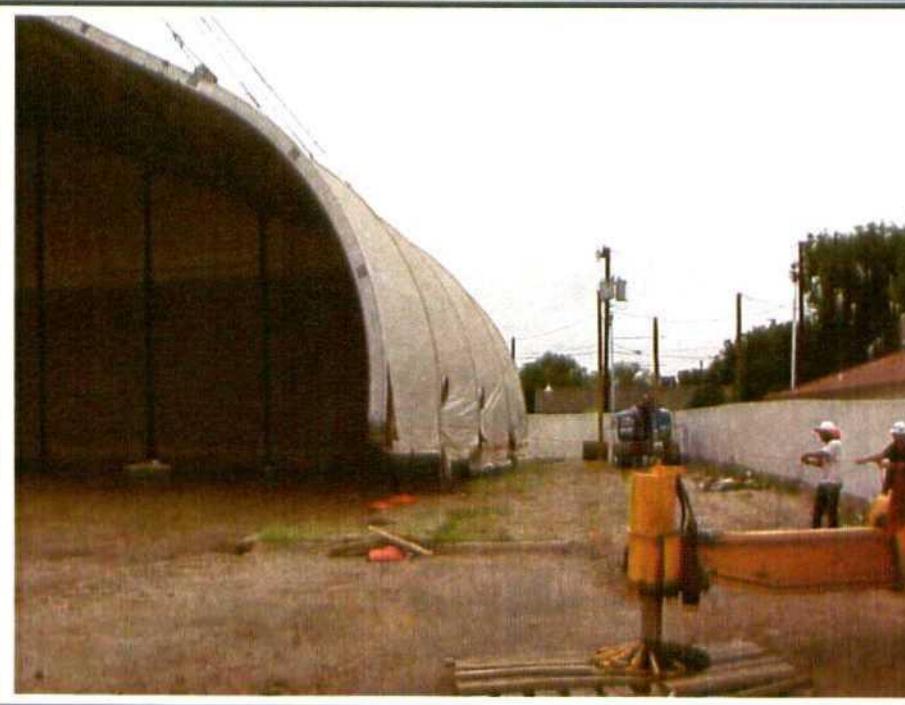

10. View from a nearby field of the structure move.

Phase II

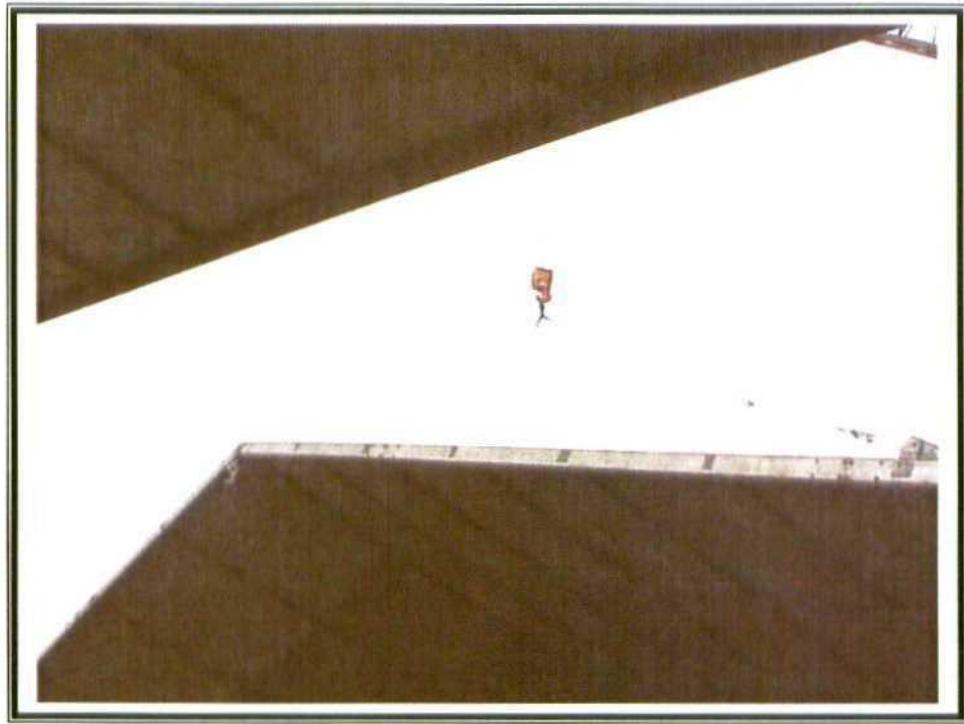

11. Lifting and moving back half of structure.

12. Lifting and moving back half of structure. Workers hold a rope tied to the corner of the structure to keep it steady.

13. Back half of structure is carefully and slowly moved into position.

14. The crane steadily closes the gap between the two massive structure halves.

15. A panel of fabric is guided up support beams to bridge the gap between the two halves of the structure.

16. A jackhammer is used to bolt structure beams into the ground.

Phase II

17. Phase II Excavation.

18. Phase II Excavation. Dump truck backed into structure to load up soil.

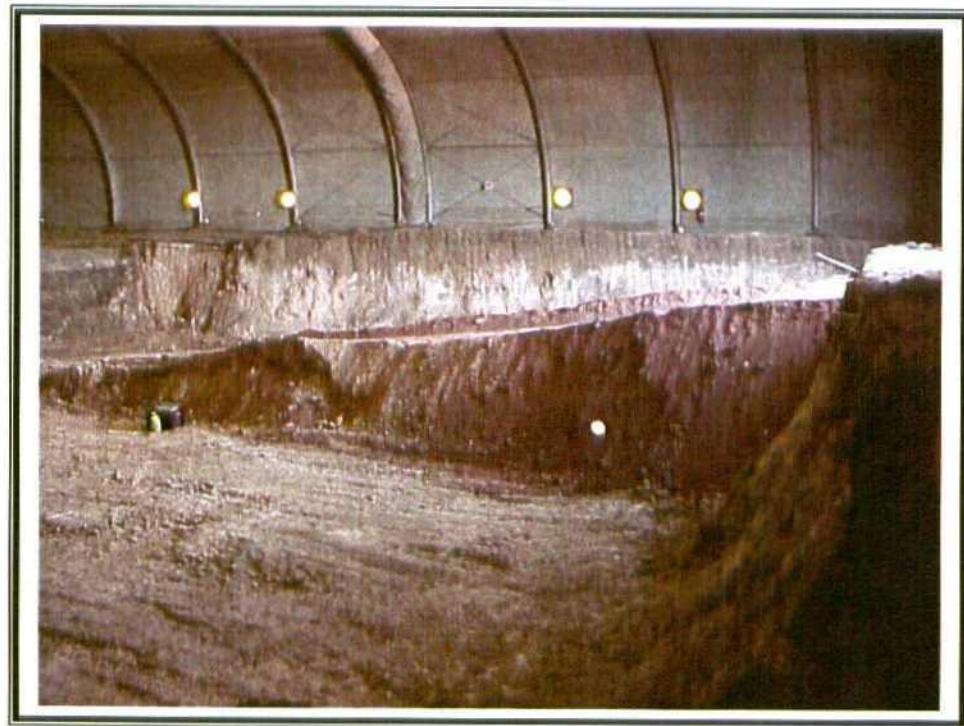

Phase II

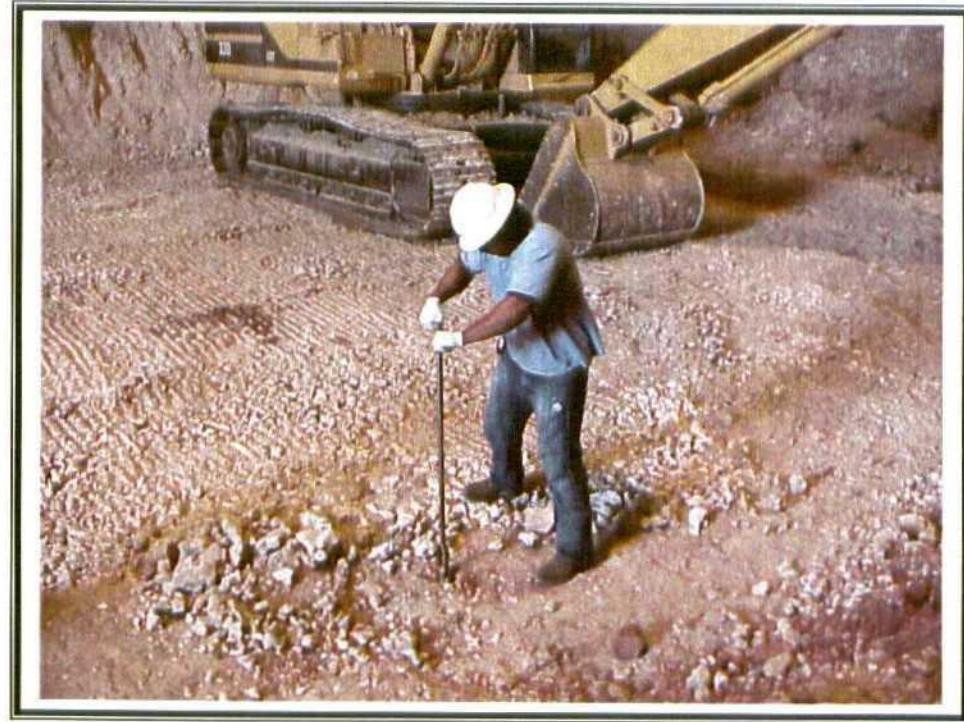

19. Phase II Excavation. Excavator loading up dump truck.

20. Phase II Excavation. Excavator piling up soil to be loaded into dump trucks.

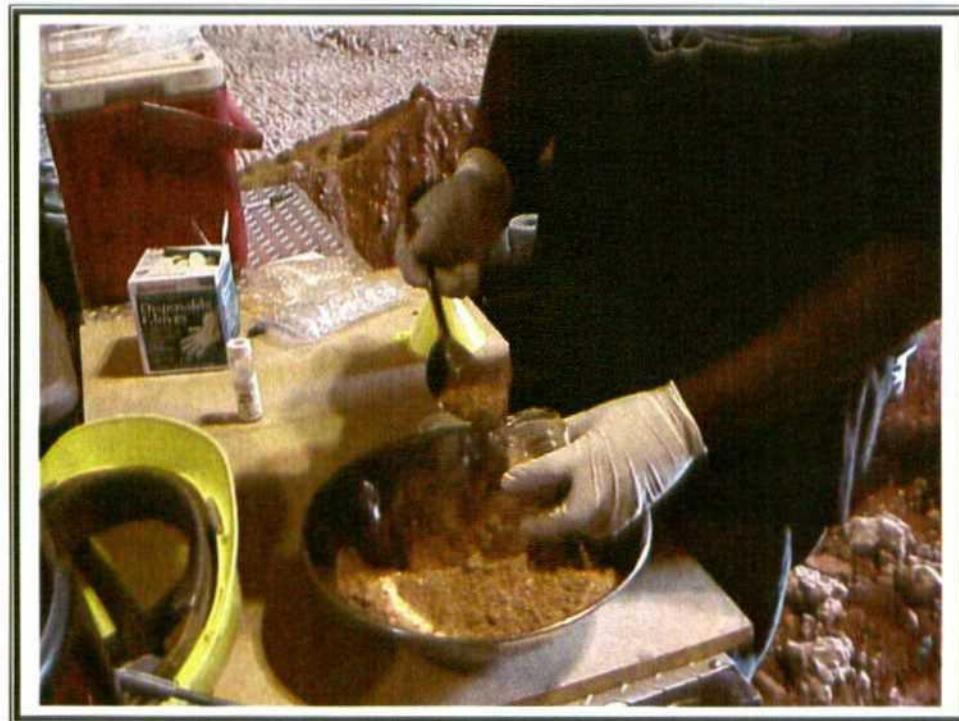

21. Phase II Excavation – bottom hole.

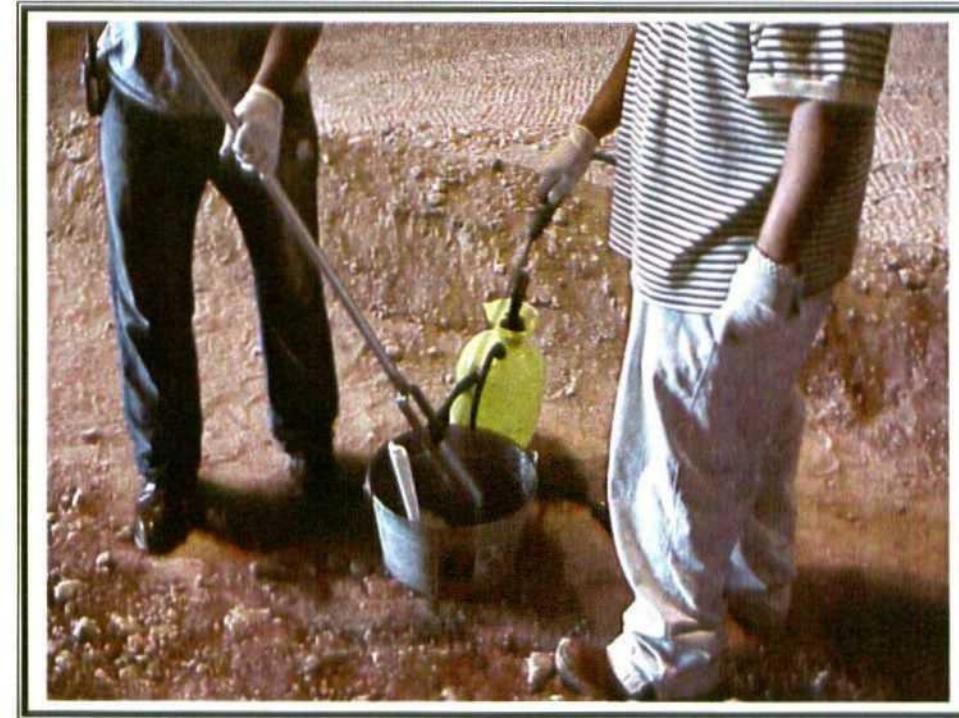

22. Phase II – Confirmation sampling.

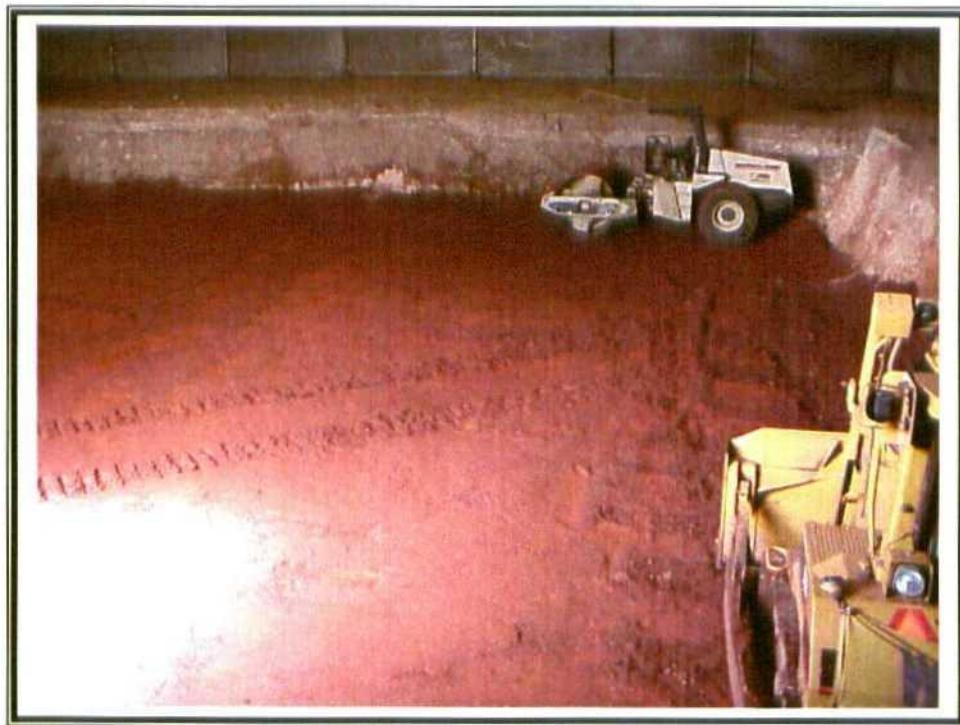

Phase II

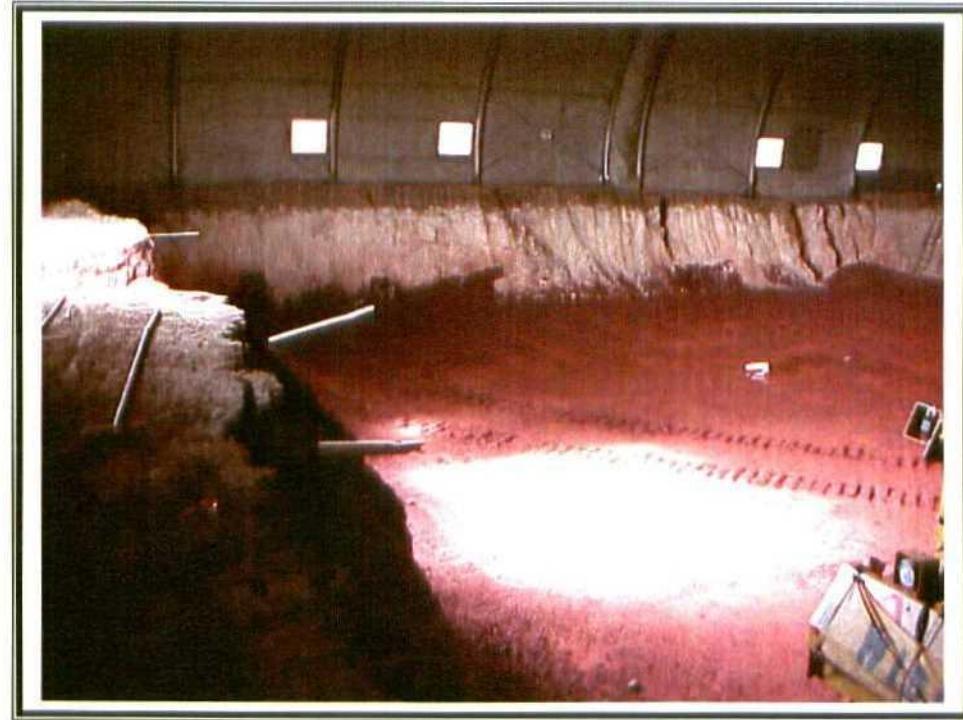

23. Phase II – Confirmation sampling. Filling sample jars with soil composite sample.

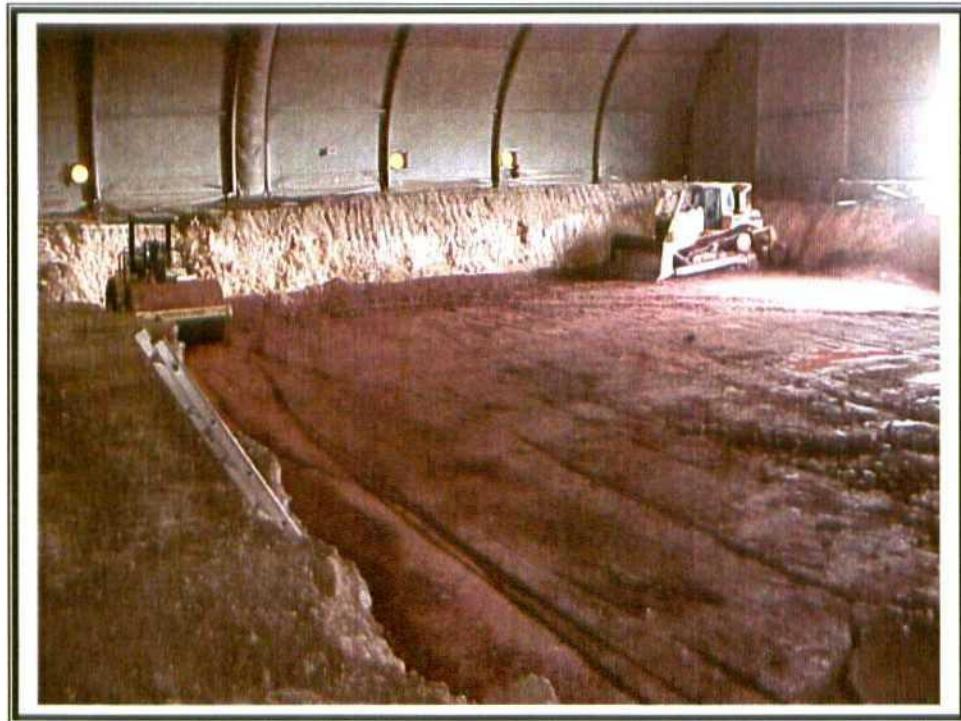

24. Phase II – Confirmation sampling. Deconning hand auger after sample collection.

25. Phase II – Backfill clay liner.

26. Phase II – Backfill clay liner.

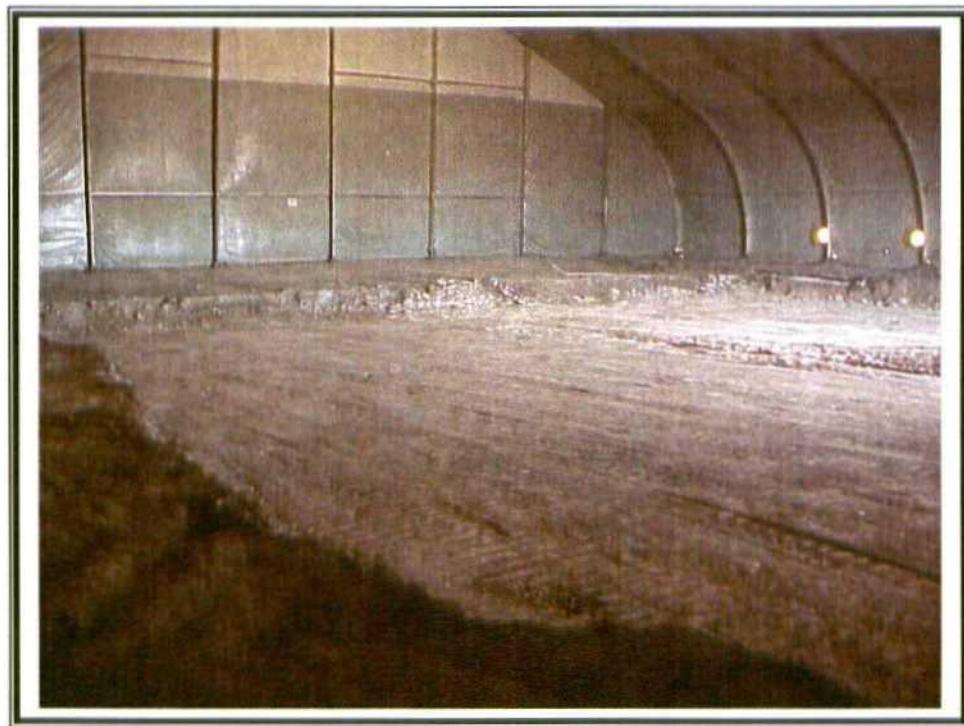

27. Phase II – Clay liner finished and leveled.

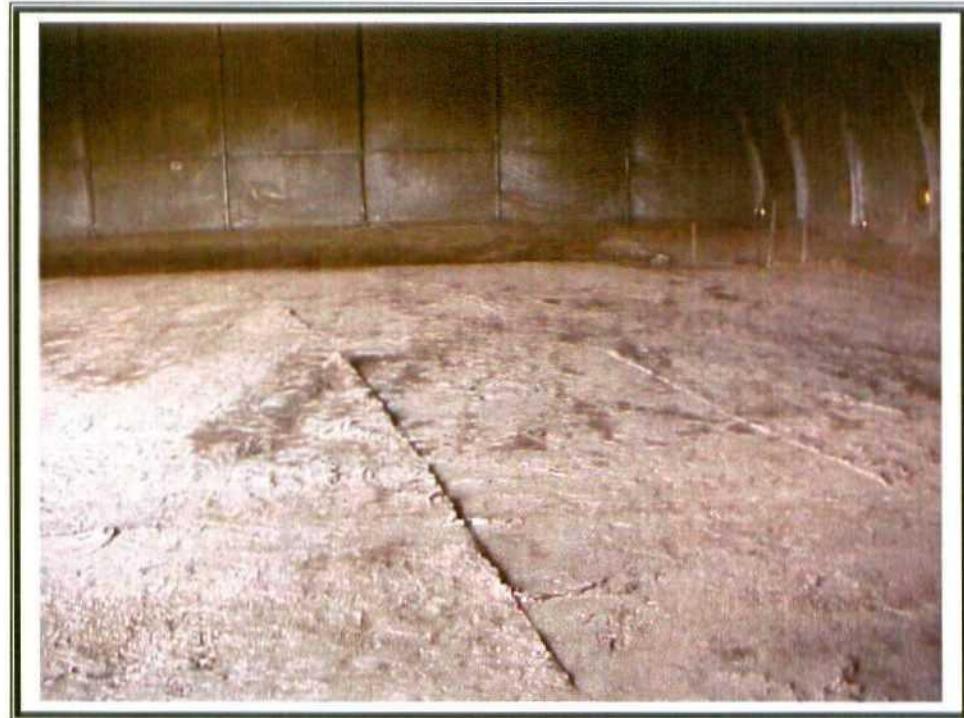

28. Phase II – Backfill almost completed.

Phase II

29. Phase II – Backfill at final stage with topsoil.

30. Phase II – Backfill completed and leveled.

22. Phase III – Excavation – bottom hole.

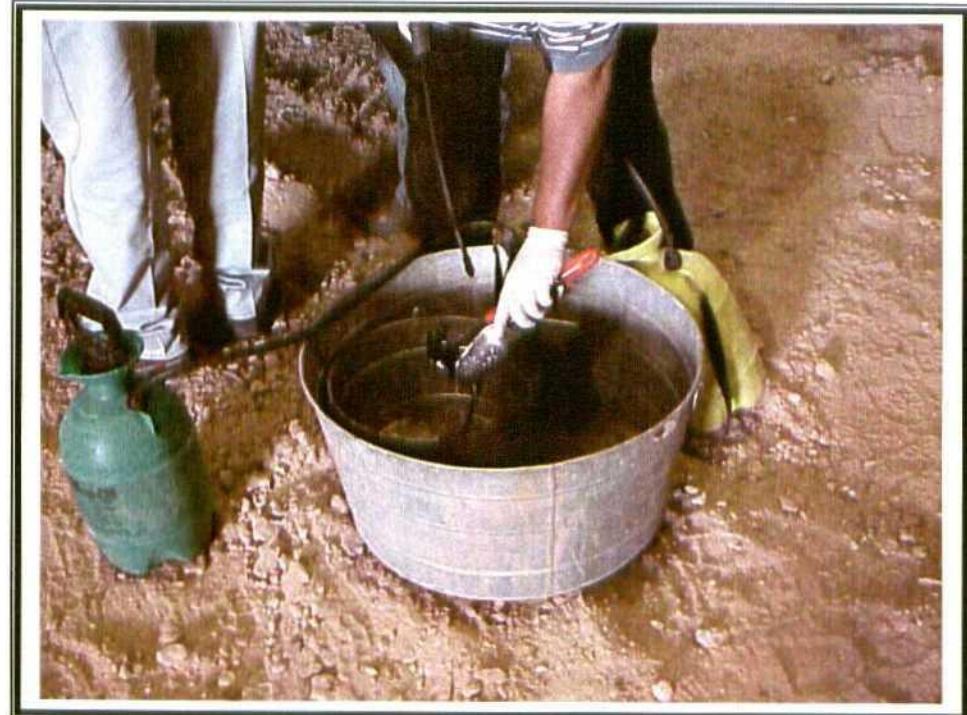

23. Phase III – Excavation – bottom hole.

Phase III

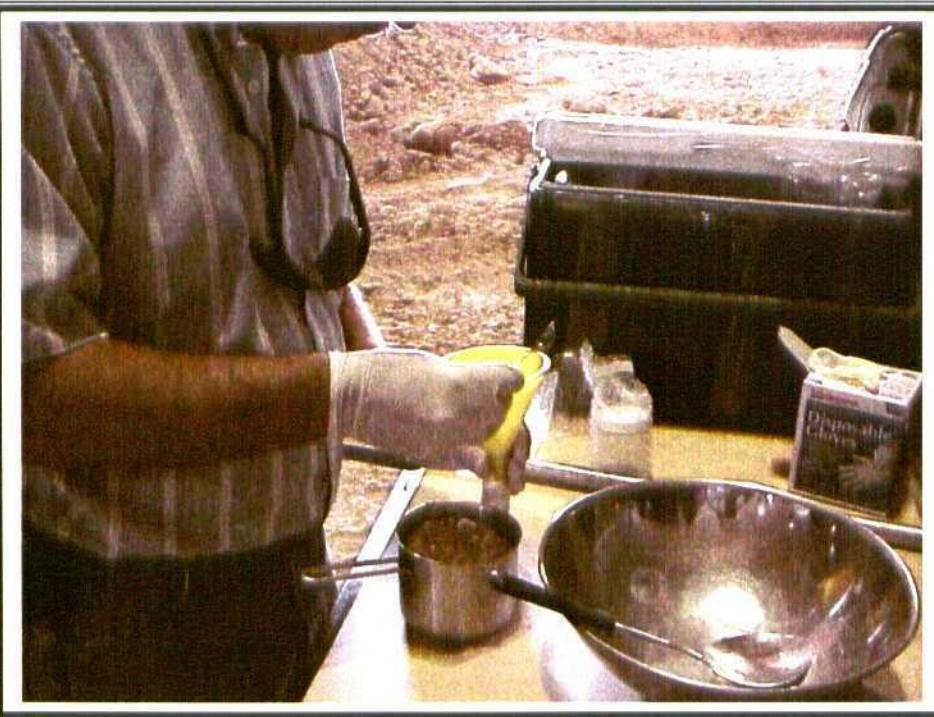

24. Phase III – Confirmation sampling.

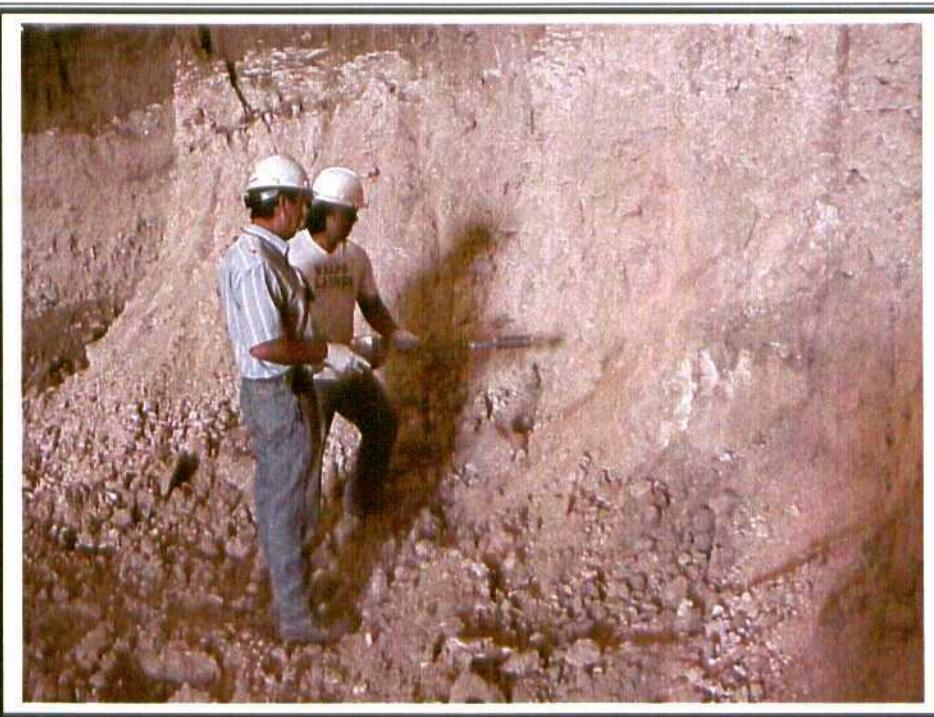

25. Phase III – Confirmation sampling. Deconning sampling tools.

Phase III

26. Phase III – Confirmation sampling. Filling sample jars.

27. Phase III – Confirmation sampling. Retrieving sample from side wall of excavated area.

Phase III

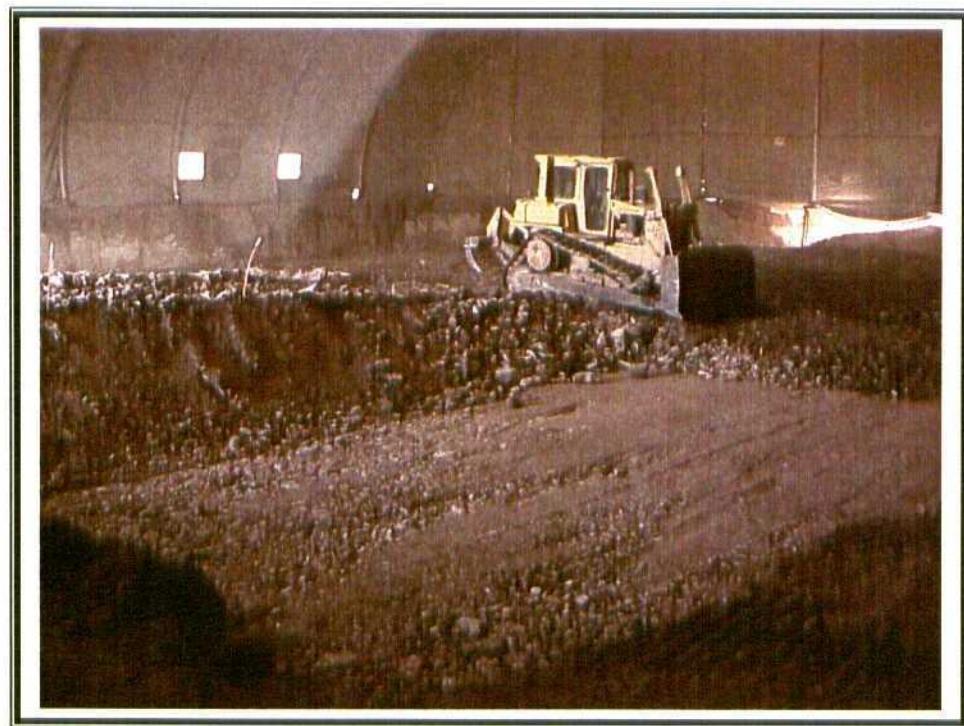

28. Phase III – Backfill. Clay liner.

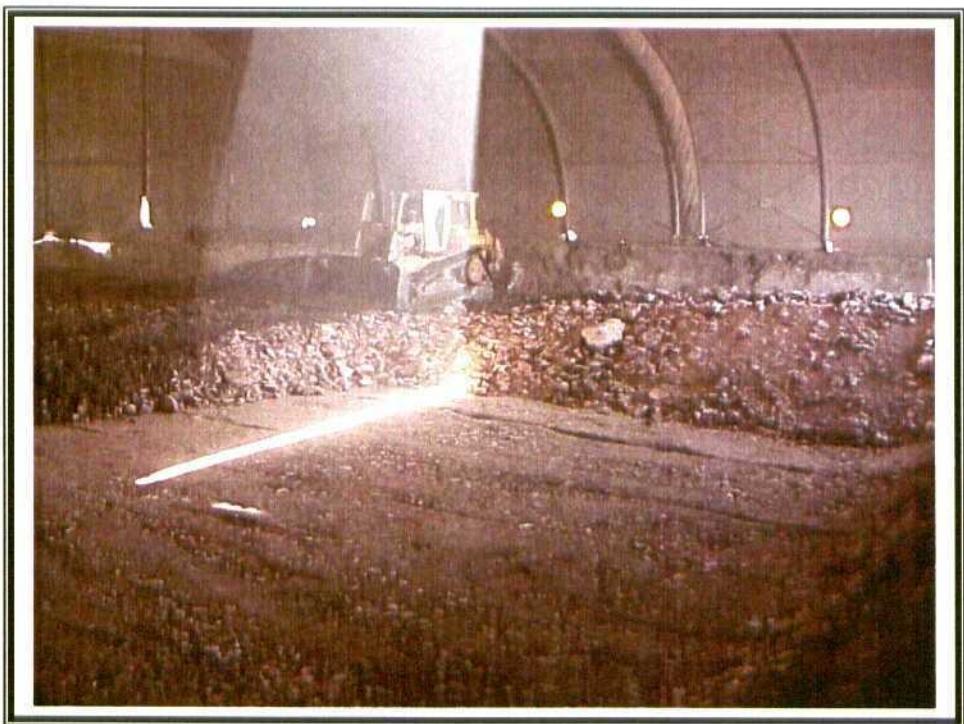

29. Phase III – Backfill. Roller packing down clay liner.

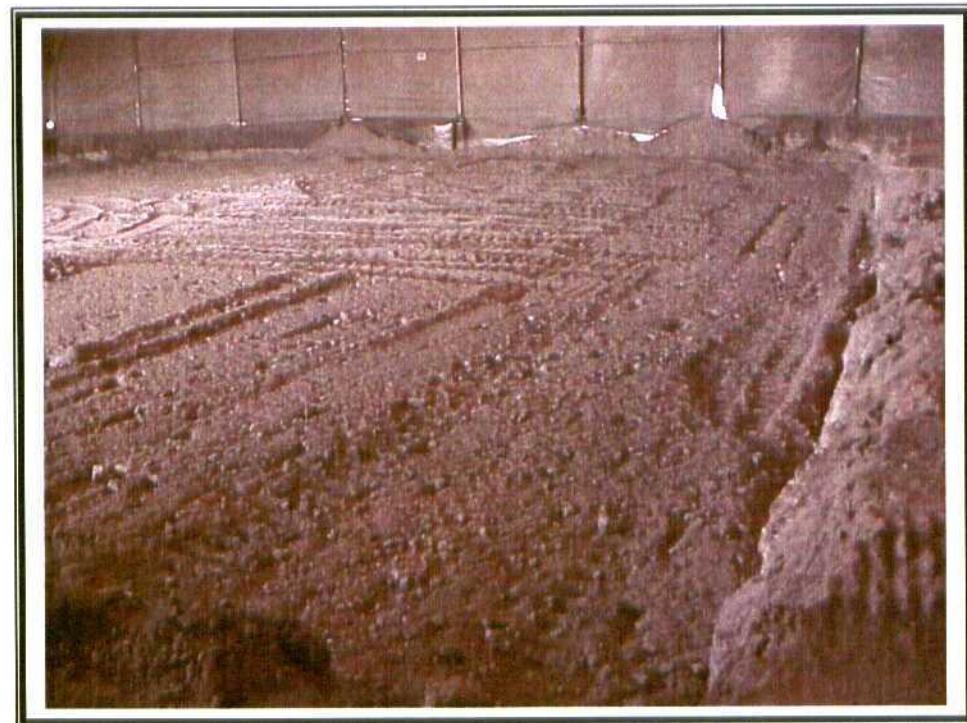

Phase III

30. Phase III – Backfill. Dozer spreading caliche.

31. Phase III – Backfill. Dozer spreading caliche.

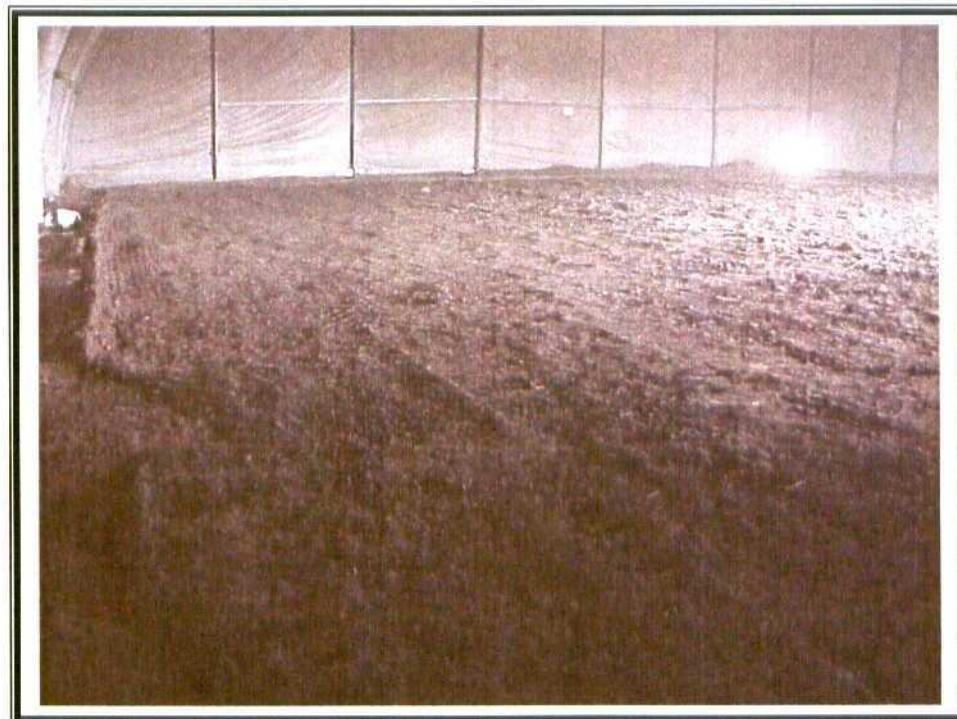

32. Phase III – Backfill caliche near surface.

33. Phase III – Backfill topsoil.

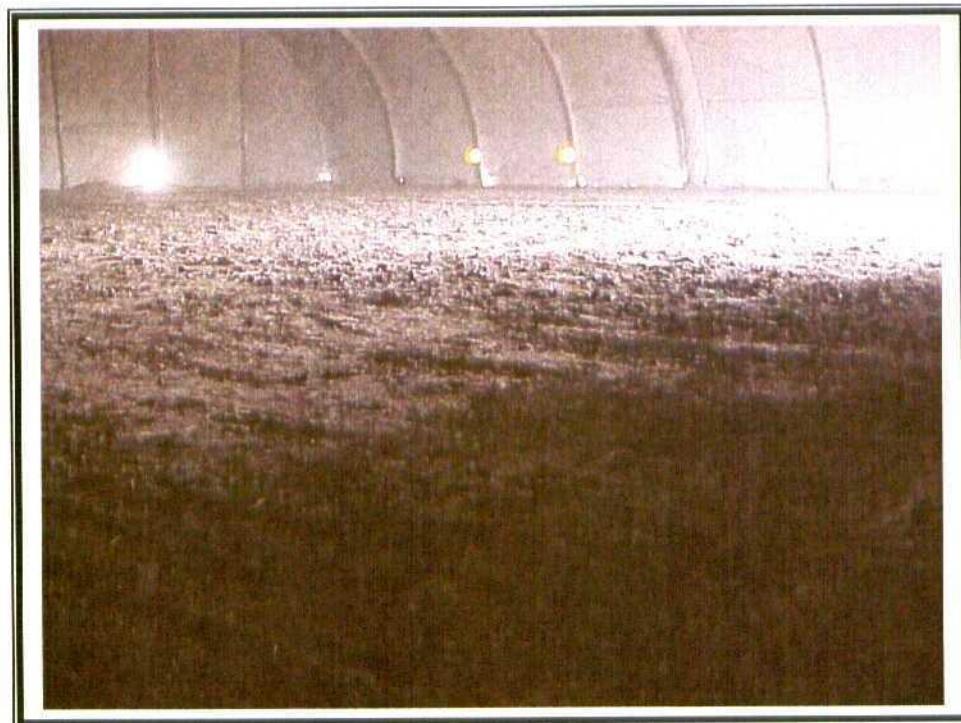

34. Phase III – Backfill topsoil.

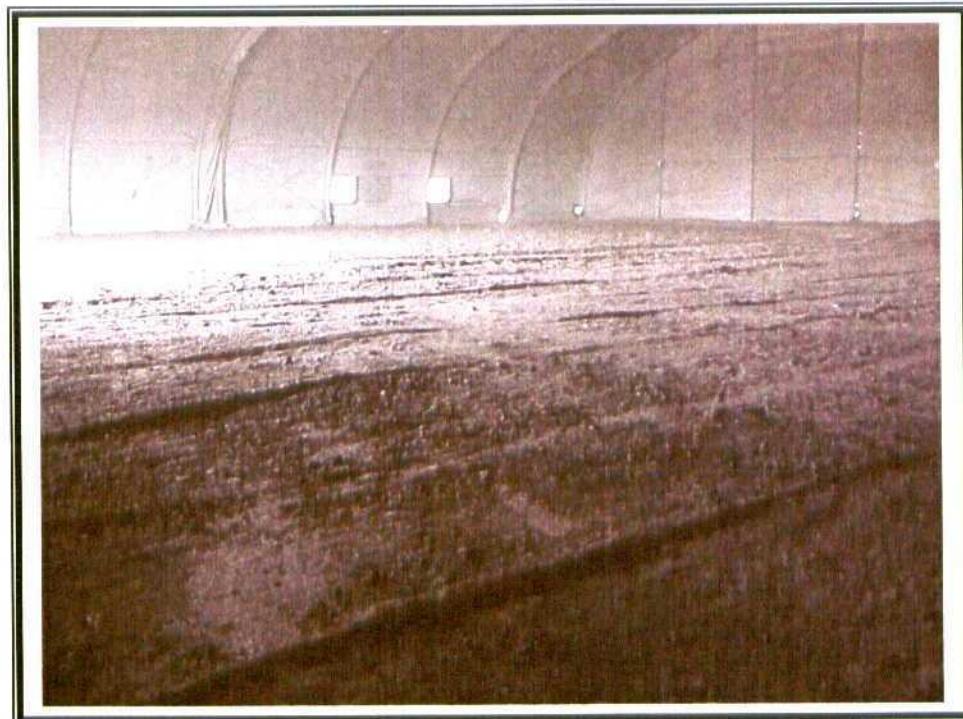

35. Phase III – Backfill topsoil.

Phase III

36. Phase III – Backfill topsoil.

37. Phase III – Backfill completed.

APPENDIX II

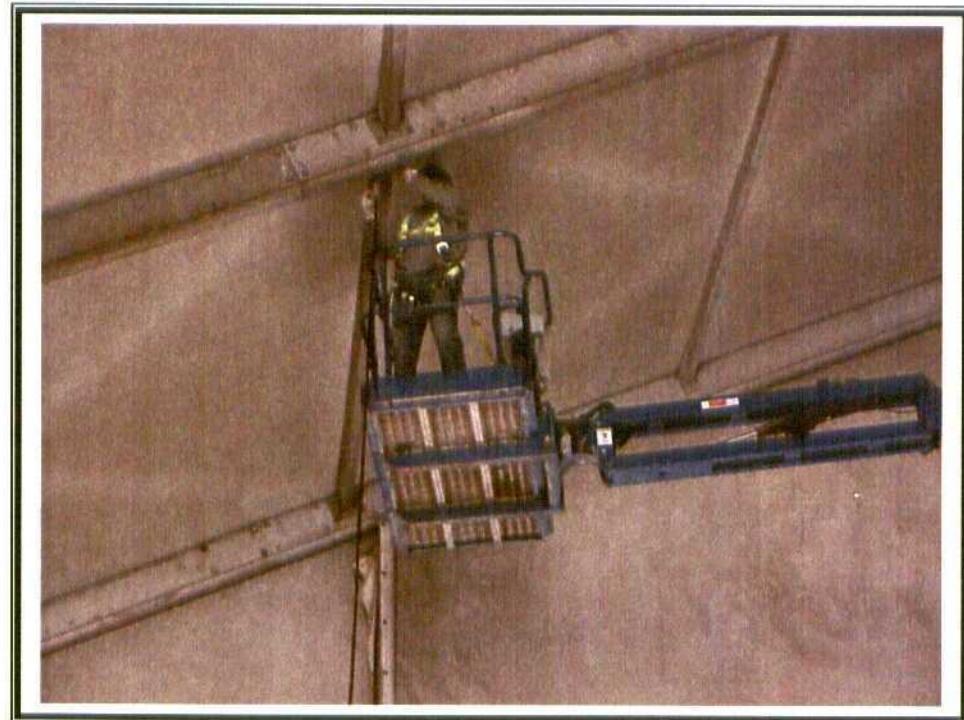

Site Photographs
Structure Dismantle
October 2002

**Westgate Stage 2 Abatement Plan-
Remediation Activities Report
Hobbs, New Mexico**

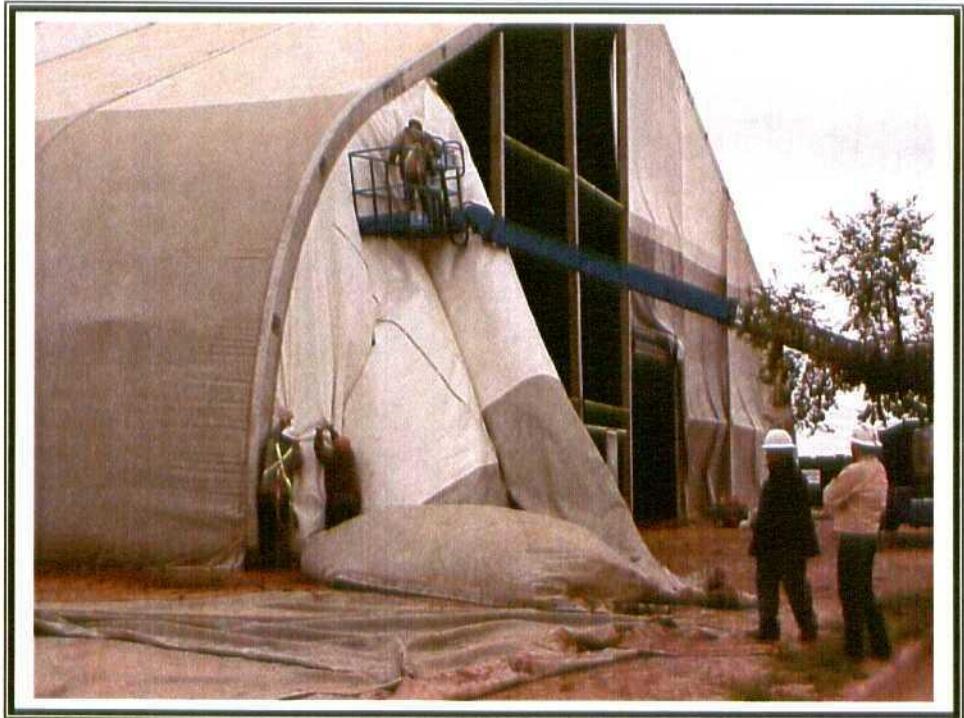

Prepared for:
Shell Exploration & Production Company
Houston, Texas

May 2003

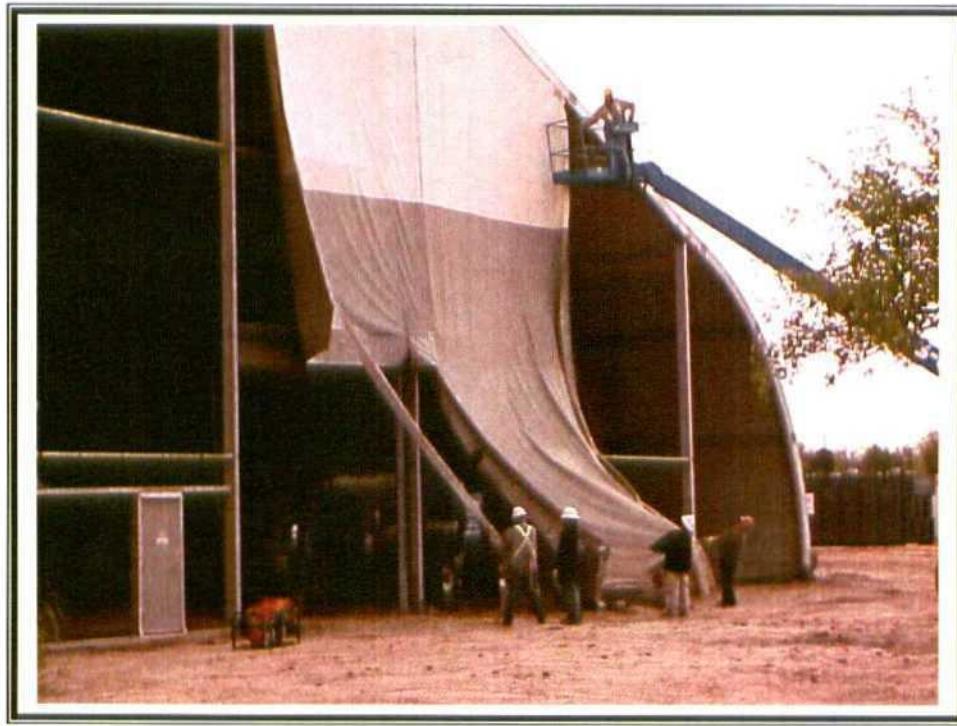

Prepared by:
BBC International, Inc.

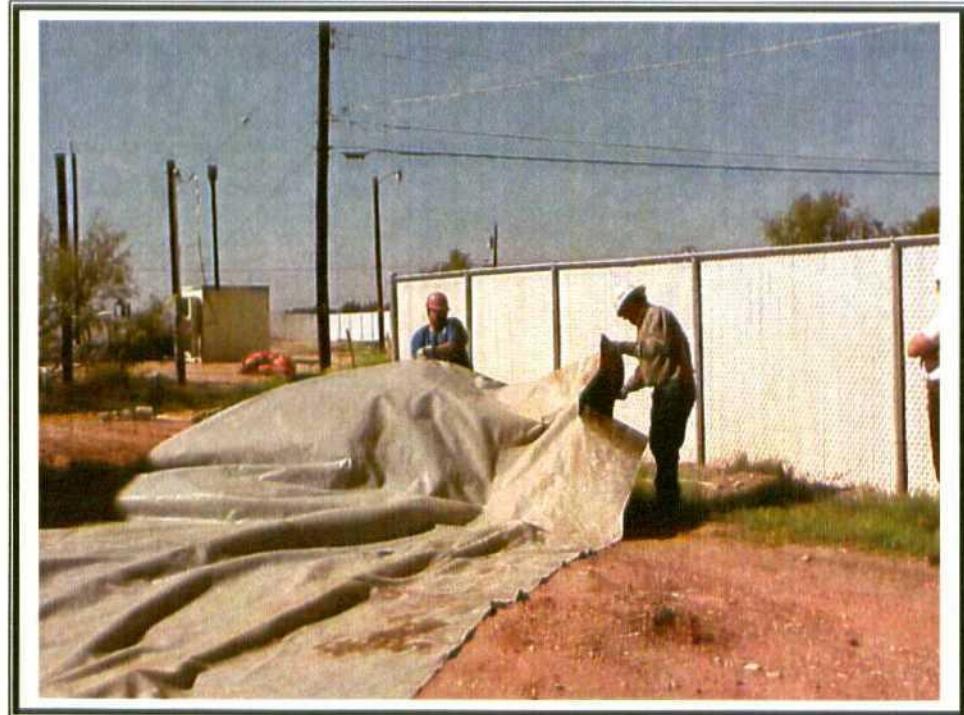

1. Universal Fabric Structure crewman removing bolts on cross bar support beams.

2. Universal Fabric Structure crewman removing front panel of fabric.

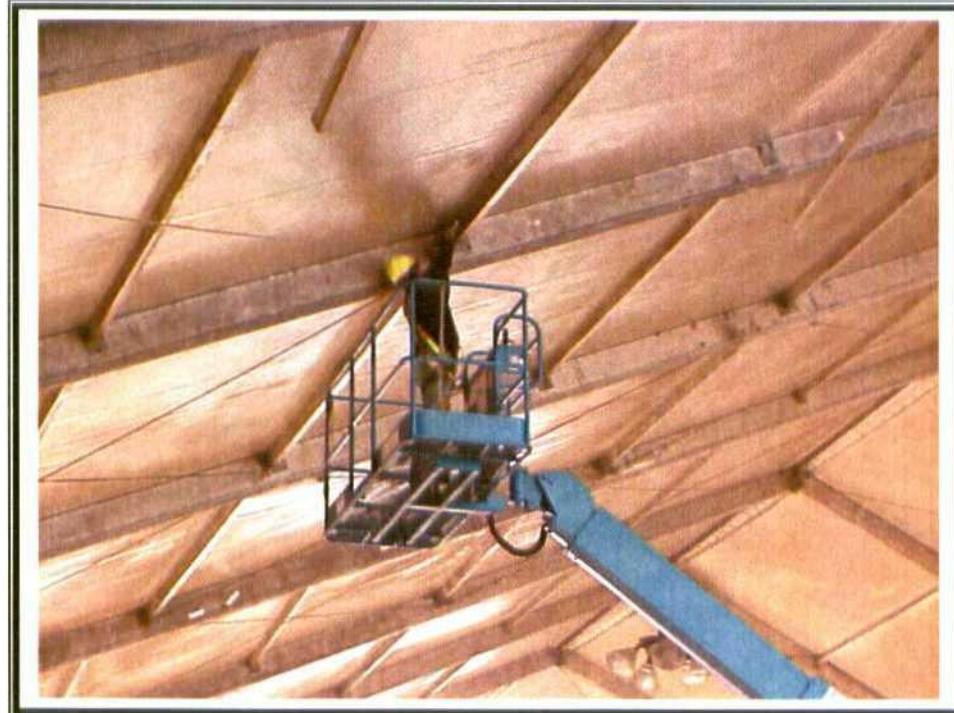

3. Universal Fabric Structure crewman removing another large panel of fabric from the front of structure.

4. Universal Fabric Structure crewman folding fabric that has been removed from structure.

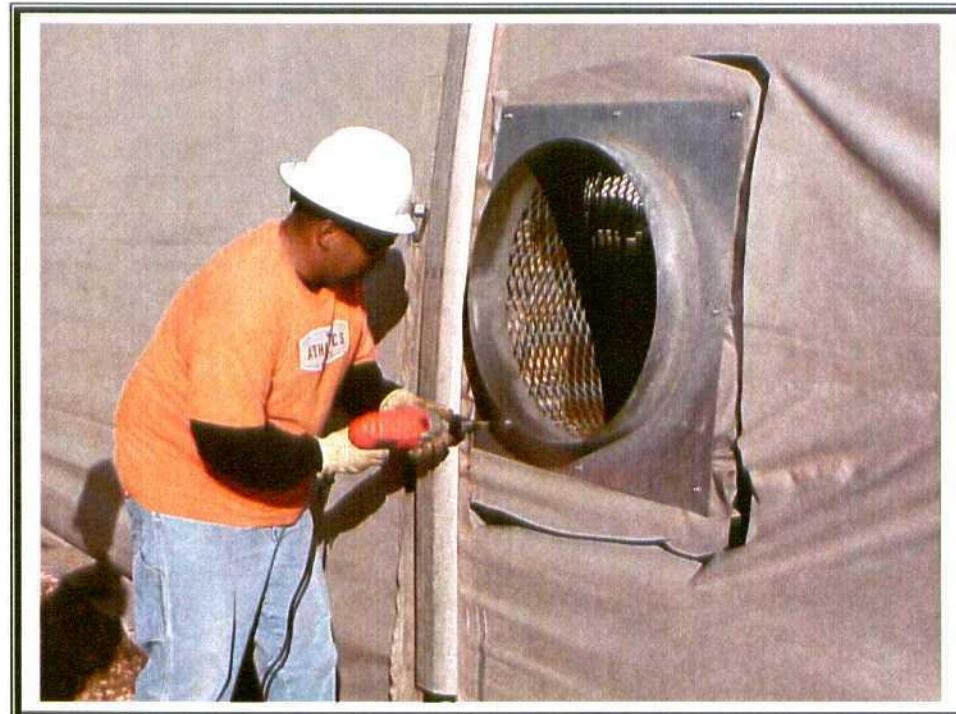

5. Universal Fabric Structure crewman releasing upright support beam from the front of the structure.

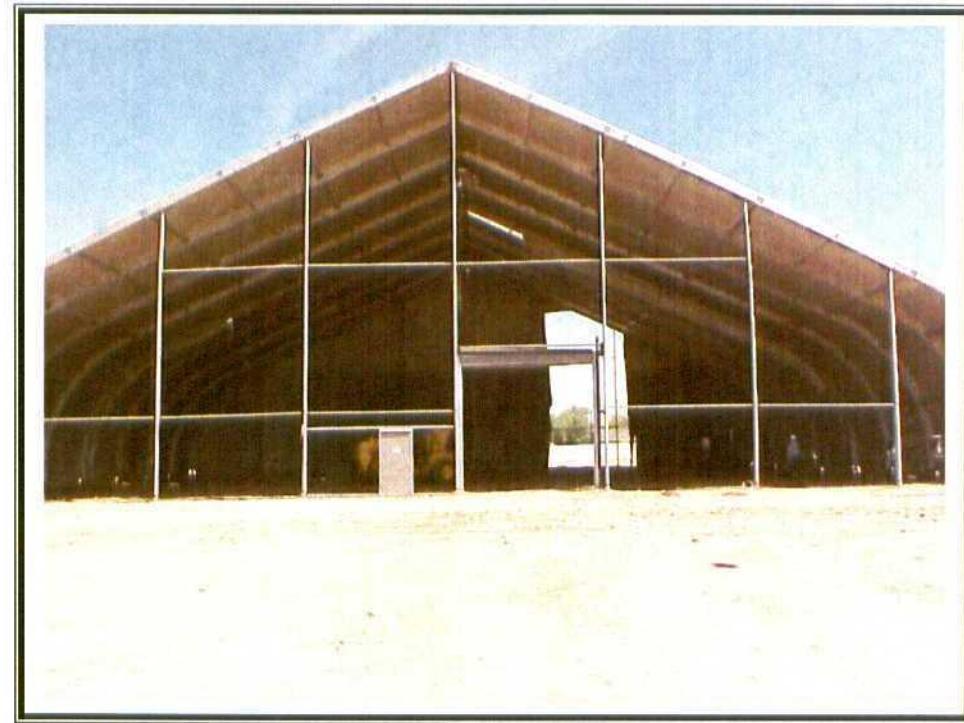

6. Universal Fabric Structure crewman removing bolts and releasing tension cables that criss cross support beams.

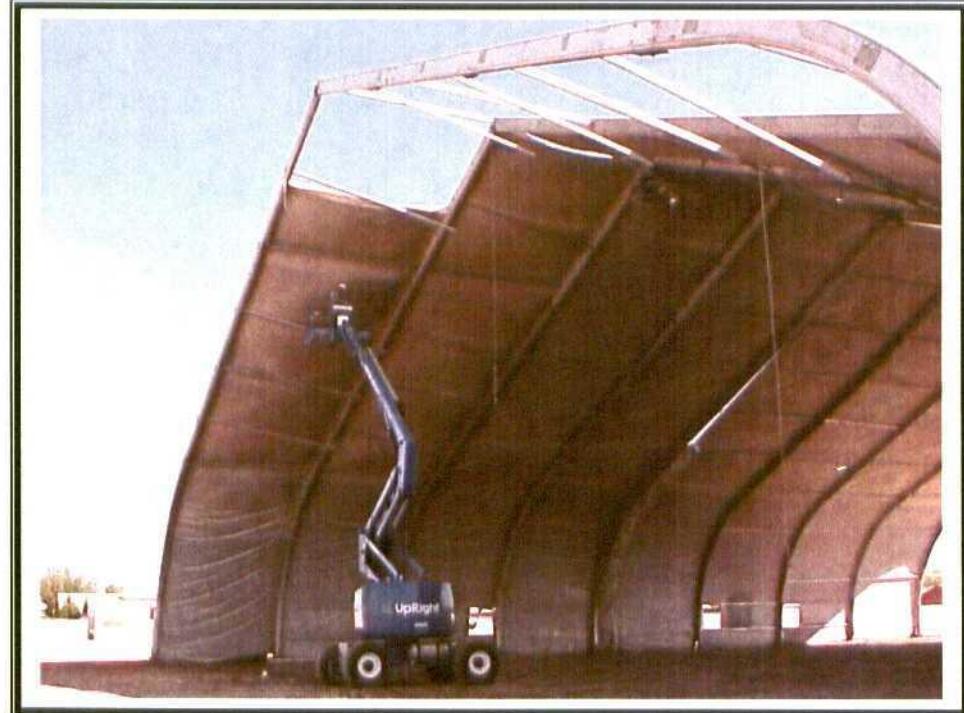

7. Support beams are detached on one side only and will be removed once each section is lowered to the ground.

8. Removing ventilation plates that were part of the carbon filtration system.

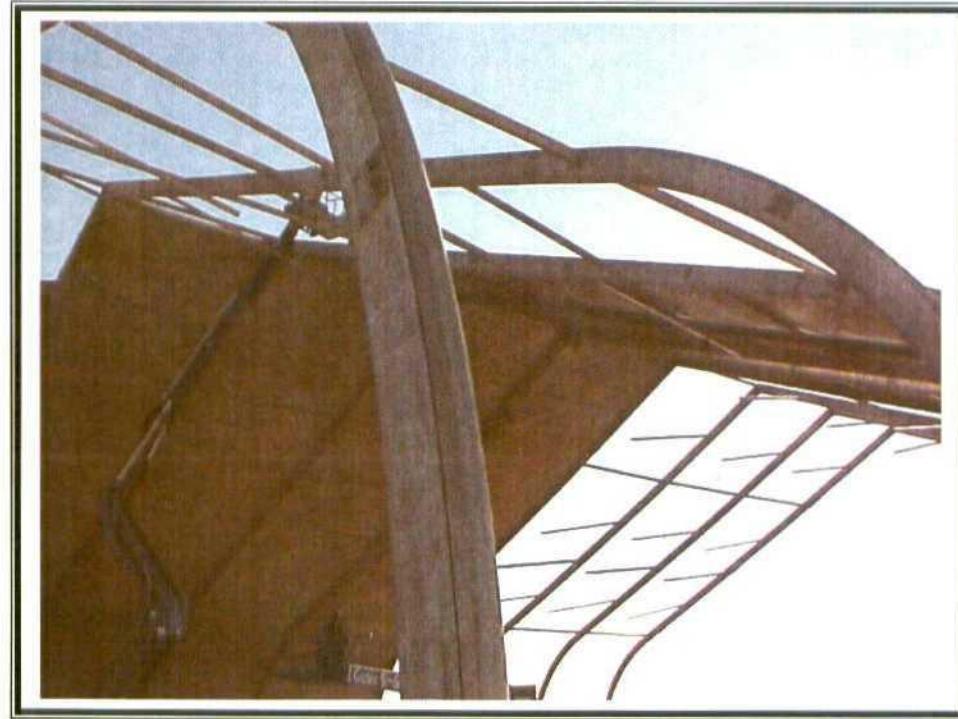

9. Front view of structure without fabric panels.

10. Fabric panels were removed a section at a time. Structure crewman in the manlift assists the panel downward.

11. View of structure with fabric removed.

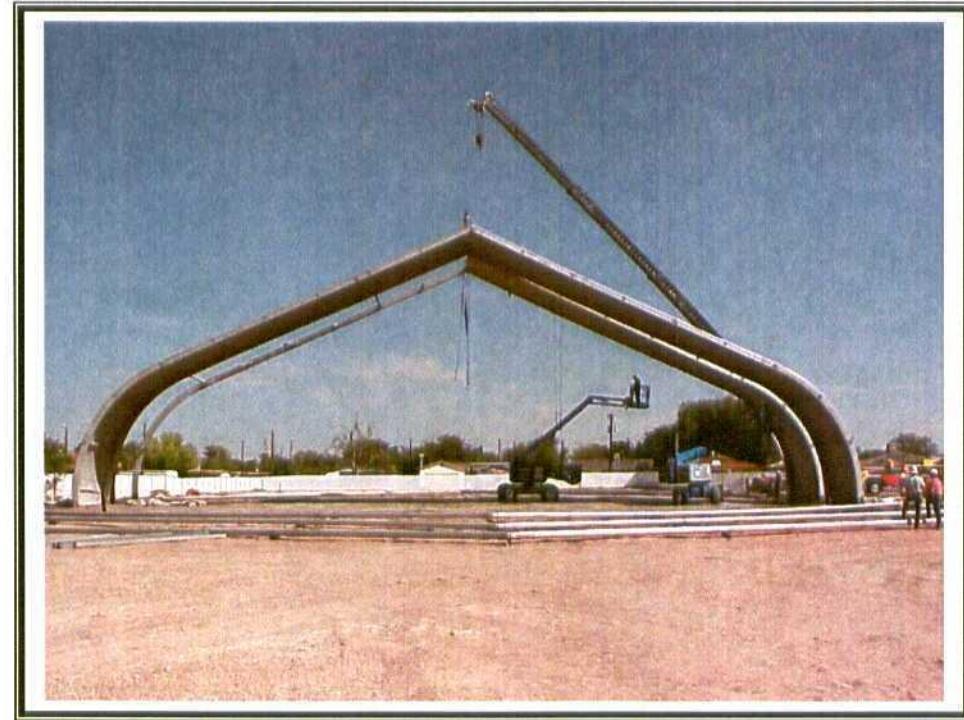

12. View of structure with fabric removed.

13. Front view of structure with fabric removed.

14. Structure crewman detaching crossbeams from the last ribs still standing.

15. View of structure with three sections left to be lowered to the ground. Several sections have already been lowered as seen at the bottom of the photo.

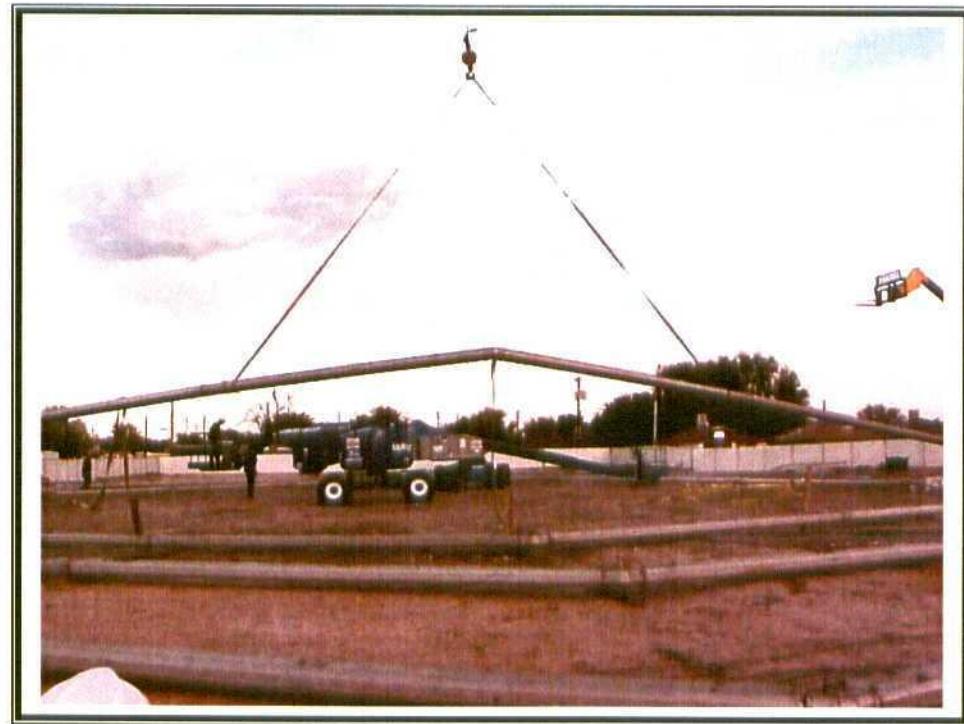

16. Three structure ribs remaining.

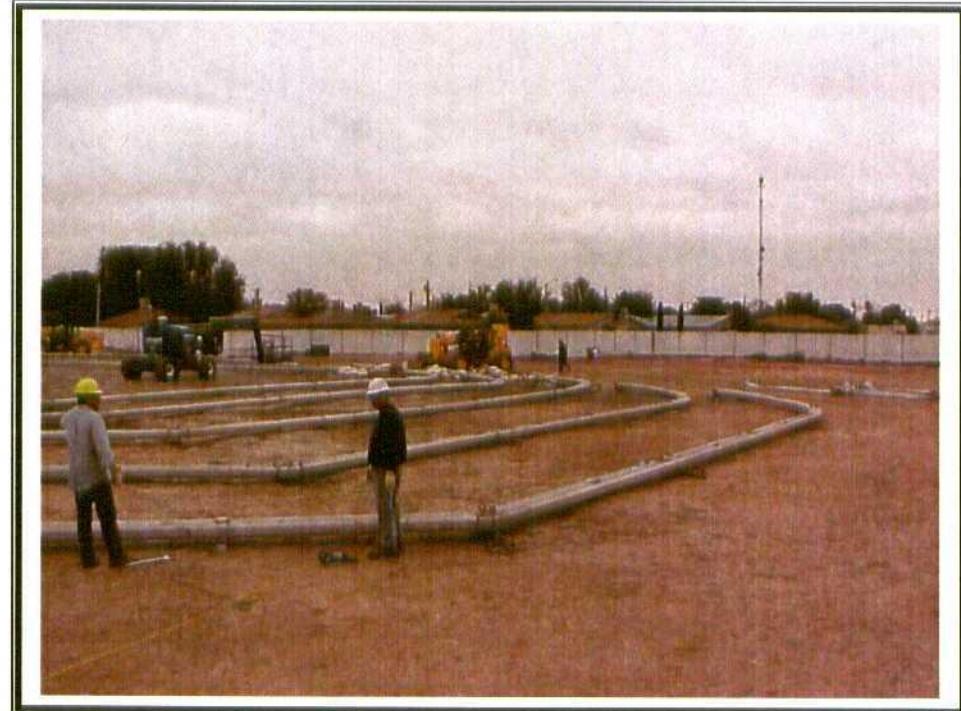

17. Crane lowering a rib of structure framework.

18. Last two pieces of framework standing. Final piece was tied down to stabilize it.

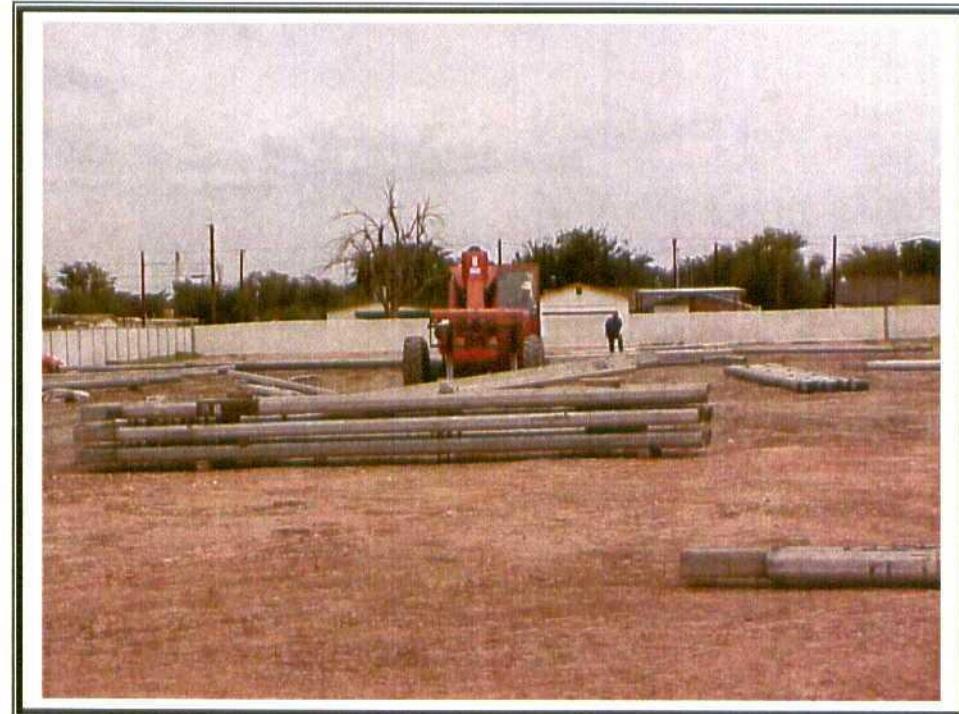

19. Final piece of structure framework is lowered.

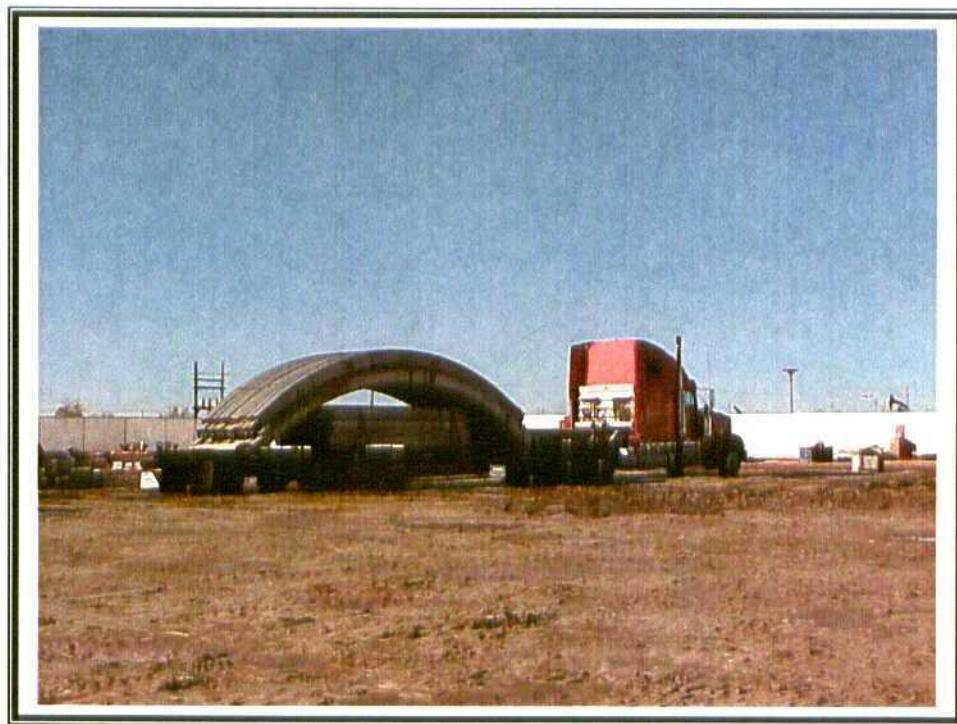

20. Structure crewmen disassemble structure framework.

21. Structure crewmen disassemble framework and forklift stacks pieces.

22. Framework stacked in piles.

23. Carrier hauling off structure framework.

24. Winch truck loading carbon filtration unit on carrier truck.

25. Winch truck loading carbon beds onto carrier truck.

4	6-WW Comp	Soil	5/13/02	10:44	5/15/02

results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed. The RDL is equal to MQL for all organic analytes including TPH.

Test results contained within this report meet all requirements of LAC 33:I unless otherwise noted.

This report consists of a total of 4 pages and shall not be reproduced except in its entirety including the chain of custody (), without written approval of TraceAnalysis, Inc.

Dr. Blair Leftwich, Director

Enclosed are the Analytical Results and Quality Control Data Reports for the following samples submitted to TraceAnalysis, Inc.

Sample	Description	Matrix	Date Taken	Time Taken	Date Received
7118	1-NEB	Soil	5/13/02	9:36	5/15/02
197119	2-SEB	Soil	5/13/02	9:50	5/15/02
197120	3-EW Comp	Soil	5/13/02	10:10	5/15/02
197121	4-NW Comp	Soil	5/13/02	10:25	5/15/02
197122	5-SW Comp	Soil	5/13/02	10:33	5/15/02
197123	6-WW Comp	Soil	5/13/02	10:44	5/15/02

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

Note: the RDL is equal to MQL for all organic analytes including TPH.

The test results contained within this report meet all requirements of LAC 33:I unless otherwise noted.

This report consists of a total of 6 pages and shall not be reproduced except in its entirety including the chain of custody (COC), without written approval of TraceAnalysis, Inc.

Analytical and Quality Control Report

Cliff Brunson
BBC International Inc.
P.O. Box 805
Hobbs, NM 88241

Report Date: June 5, 2002

Order ID Number: A02051624

Project Number: N/A
Project Name: Shell Westgate
Project Location: Hobbs, NM

Enclosed are the Analytical Results and Quality Control Data Reports for the following samples submitted to TraceAnalysis, Inc.

Sample	Description	Matrix	Date Taken	Time Taken	Date Received
7179	1-NEB	Soil	5/13/02	9:36	5/15/02
197180	2-SEB	Soil	5/13/02	9:50	5/15/02
197181	3-EW Comp	Soil	5/13/02	10:10	5/15/02
197182	4-NW Comp	Soil	5/13/02	10:25	5/15/02
197183	5-SW Comp	Soil	5/13/02	10:33	5/15/02
197184	6-WW Comp	Soil	5/13/02	10:44	5/15/02

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

Note: the RDL is equal to MQL for all organic analytes including TPH.

The test results contained within this report meet all requirements of LAC 33:I unless otherwise noted.

This report consists of a total of 10 pages and shall not be reproduced except in its entirety including the chain of custody (COC), without written approval of TraceAnalysis, Inc.

Analytical and Quality Control Report

Cliff Brunson
BBC International Inc.
P.O. Box 805
Hobbs, NM 88241

Report Date: July 24, 2002

Order ID Number: A02071805

Project Number: Westgate
Project Name: 1331 Tasker
Project Location: Hobbs, NM

Enclosed are the Analytical Results and Quality Control Data Reports for the following samples submitted to TraceAnalysis, Inc.

Sample	Description	Matrix	Date Taken	Time Taken	Date Received
201950	Bottom Center	Soil	7/17/02	8:40	7/17/02
201951	North Wall Composite	Soil	7/17/02	8:50	7/17/02
201952	East Wall Composite	Soil	7/17/02	9:00	7/17/02
201953	South Wall Composite	Soil	7/17/02	9:15	7/17/02
201954	West Wall Composite	Soil	7/17/02	9:30	7/17/02

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

Note: the RDL is equal to MQL for all organic analytes including TPH.

The test results contained within this report meet all requirements of LAC 33:I unless otherwise noted.

This report consists of a total of 7 pages and shall not be reproduced except in its entirety including the chain of custody (COC), without written approval of TraceAnalysis, Inc.

Dr. Blair Leftwich, Director

Analytical and Quality Control Report

Cliff Brunson
BBC International Inc.
P.O. Box 805
Hobbs, NM 88241

Report Date: July 24, 2002

Order ID Number: A02071805

Project Number: Westgate
Project Name: 1331 Tasker
Project Location: Hobbs, NM

Enclosed are the Analytical Results and Quality Control Data Reports for the following samples submitted to TraceAnalysis, Inc.

Sample	Description	Matrix	Date Taken	Time Taken	Date Received
01955	Bottom Center	Soil	7/17/02	8:40	7/17/02
201956	North Wall Composite	Soil	7/17/02	8:50	7/17/02
201957	East Wall Composite	Soil	7/17/02	9:00	7/17/02
201958	South Wall Composite	Soil	7/17/02	9:15	7/17/02
201959	West Wall Composite	Soil	7/17/02	9:30	7/17/02

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

Note: the RDL is equal to MQL for all organic analytes including TPH.

The test results contained within this report meet all requirements of LAC 33:I unless otherwise noted.

This report consists of a total of 9 pages and shall not be reproduced except in its entirety including the chain of custody (COC), without written approval of TraceAnalysis, Inc.

Analytical and Quality Control Report

Cliff Brunson
BBC International Inc.
P.O. Box 805
Hobbs, NM 88241

Report Date: September 26, 2002

Order ID Number: A02091819

Project Number: Westgate
Project Name: 1331 Tasker
Project Location: Hobbs, NM

Enclosed are the Analytical Results and Quality Control Data Reports for the following samples submitted to TraceAnalysis, Inc.

Sample	Description	Matrix	Date Taken	Time Taken	Date Received
208237	Northwest Bottom	Soil	9/17/02	13:50	9/18/02
208238	Southwest Bottom	Soil	9/17/02	14:00	9/18/02
208239	South Wall	Soil	9/17/02	14:10	9/18/02
208240	West Wall	Soil	9/17/02	14:20	9/18/02
208241	North Wall	Soil	9/17/02	14:25	9/18/02
208242	East Wall	Soil	9/17/02	14:35	9/18/02

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

Note: the RDL is equal to MQL for all organic analytes including TPH.

The test results contained within this report meet all requirements of LAC 33:I unless otherwise noted.

This report consists of a total of 13 pages and shall not be reproduced except in its entirety including the chain of custody (COC), without written approval of TraceAnalysis, Inc.

Note: Samples will be disposed of 30 days from the report date unless the lab is contacted before the 30 days has past.

Dr. Blair Leftwich, Director

Report Date: September 26, 2002

Analytical and Quality Control Report

Cliff Brunson
BBC International Inc.
P.O. Box 805
Hobbs, NM 88241

Report Date: October 2, 2002

Order ID Number: A02091818

Project Number: Westgate
Project Name: 1331 Tasker
Project Location: Hobbs,NM

Enclosed are the Analytical Results and Quality Control Data Reports for the following samples submitted to TraceAnalysis, Inc.

Sample	Description	Matrix	Date Taken	Time Taken	Date Received
208231	Northwest Bottom	Soil	9/17/02	13:50	9/18/02
208232	Southwest Bottom	Soil	9/17/02	14:00	9/18/02
208233	South Wall	Soil	9/17/02	14:20	9/18/02
208234	West Wall	Soil	9/17/02	14:30	9/18/02
208235	North Wall	Soil	9/17/02	14:25	9/18/02
208236	East Wall	Soil	9/17/02	14:45	9/18/02

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

Note: the RDL is equal to MQL for all organic analytes including TPH.

The test results contained within this report meet all requirements of LAC 33:I unless otherwise noted.

This report consists of a total of 6 pages and shall not be reproduced except in its entirety including the chain of custody (COC), without written approval of TraceAnalysis, Inc.

Note: Samples will be disposed of 30 days from the report date unless the lab is contacted before the 30 days has past.

Hobbs, NM

...Continued Sample: 208236 Analysis: Volatiles

Param	Flag	Result	Units	Dilution	RDL
Ethylbenzene		<25.0	µg/Kg	25	1
m,p-Xylene		<25.0	µg/Kg	25	1
<i>o</i> -Xylene		<25.0	µg/Kg	25	1

Surrogate	Flag	Result	Units	Dilution	Spike Amount	Percent Recovery	Recovery Limits
Dibromofluoromethane		46.9	µg/Kg	1	50	93	70 - 130
Toluene-d8		48.5	µg/Kg	1	50	97	70 - 130
4-Bromofluorobenzene		49.7	µg/Kg	1	50	99	70 - 130

Quality Control Report Method Blank

Method Blank

QCBatch: QC23865

Param	Flag	Results	Units	Reporting Limit
Benzene		<10.0	µg/Kg	1
Toluene		<10.0	µg/Kg	1
Ethylbenzene		<10.0	µg/Kg	1
m,p-Xylene		<10.0	µg/Kg	1
o-Xylene		<10.0	µg/Kg	1

Surrogate	Flag	Result	Units	Dilution	Spike Amount	Percent Recovery	Recovery Limits
Dibromofluoromethane		45.3	µg/Kg	1	50	91	70 - 130
Toluene-d8		49.2	µg/Kg	1	50	98	70 - 130
4-Bromofluorobenzene		50.9	µg/Kg	1	50	102	70 - 130

Quality Control Report Lab Control Spikes and Duplicate Spikes

Laboratory Control Spikes

QCBatch: QC23865

Param	LCS Result	LCSD Result	Units	Dil.	Spike Amount	Matrix Result	% Rec	RPD	% Rec Limit	RPD Limit
1,1-Dichloroethene	2630	2570	µg/Kg	1	2500	<10.0	105	2	70 - 130	20
Benzene	2380	2310	µg/Kg	1	2500	<10.0	95	2	70 - 130	20
Trichloroethene (TCE)	2300	2280	µg/Kg	1	2500	<10.0	92	0	70 - 130	20
Toluene	2440	2250	µg/Kg	1	2500	<10.0	97	8	70 - 130	20
Chlorobenzene	2450	2380	µg/Kg	1	2500	<10.0	98	2	70 - 130	20

Percent recovery is based on the spike result. RPD is based on the spike and spike duplicate result.

Surrogate	LCS Result	LCSD Result	Units	Dilution	Spike Amount	LCS % Rec	LCSD % Rec	Recovery Limits
Dibromofluoromethane	37.7	36.3	µg/Kg	1	50	75	73	70 - 130

Shell Exploration & Production Company
Houston, Texas

May 2003

Prepared by:
BBC International, Inc.

1:30 pm Watering site. Trucks loading 3rd haul.
3:00 pm 1st truck back for 4th haul.
4:10 pm Dust storm blew through site.

5-7 (OVER LIMIT DAY)

8:30 am Site activities beginning.
9:30 am Water truck watering site.
10:30 am Very dusty from wind.
11:30 am Very dusty from wind. Watering site. Trucks loading 2nd haul.
1:00 pm Windy.
1:10 pm Trucks back for 3rd haul.
1:45 pm Water truck watering.
2:30 pm Shut down site operations due to wind and dust blowing into neighborhood. Excavator moved back into structure.
2:50 pm Watering site and in front of tent. Put extra water around clay mounds.
2:55 pm Truck back for 4th haul. Work commenced after watering down site.
3:09 pm Two more trucks on site.
3:40 pm Watering site.
4:00 pm Wallach dumping load of clay.
4:30 pm Watering site.

5-8 (OVER LIMIT DAY)

7:30 am Watered site.
8:20 am Trucks positioning for 1st haul.
9:18 am Watering site. All other trucks loaded and gone. No other site activity.
10:00 am Windy. Site well watered.
10:04 am Wallach dumped another load of clay. No visible dust blowing.
10:30 am No truck activity. Site well watered.
11:00 am Trucks returning for 2nd haul.
11:15 am Kids riding 4-wheelers outside site fence on south and west end.
11:35 am Winds picked up blowing dust.
11:47 am Watering front of tent.
11:50 am Huge mass of dirt and dust blew across site. Site well watered.
12:05 pm Dust blowing across site.
1:35 pm Wind gust blew large mass of dust across site. No truck activity at this time.
1:45 pm 1st truck back for 3rd haul. Site well watered.
2:35 pm Dumping load of clay. School bus riding along fenceline stirring up dust.
3:07 pm 1st truck back for 4th haul.
3:30 pm Watering site.
4:15 pm Last truck gone.
4:30 pm Watering site.

9-26

Not much notation on Thursday??? I was absent possibly.

9-27 (OVER LIMIT DAY) Friday

9-11:00 am	Truck activity.
2:00-4:20 pm	Truck activity.
3:23 pm	Watering site and roads. Watered inside structure.
3:30 pm	Windy. A lot of dust blowing off trucks across site.
4:20 pm	Loader working on ramp. Site watered. Low dust.

No weekend notes for 9-28, 9-30

Appendix G

Operations Logs

4-12

5:00 pm 4-wheelers noted on south side of site across fence kicking up dust.

4-15

8:55 am Excavator moving into tent. Dump trucks positioning. Ground has not been watered down yet. Wallach truck dumping load of clay outside tent and near east monitor station.
9:10 am Water truck watering site.
10:06 am Wind picked up blowing dirt across site.
10:25 am Water truck watering. Wallach truck dumping another load of clay – truck causing some dust.
10:30 am Winds picked up again blowing dust around. Dump trucks moving around.
10:48 am Still watering around site.
11:15 am Windy. Truck backing into tent. Some dust blowing.
11:30 am Windy. Trucks moving around. Dusty.
12:00 pm Watered Site.
1:00 pm Watered Site.
1:10 pm Trucks positioning for 3rd haul. Some wind. Some light dust.
1:22 pm Watering site.
2:20 pm Watering site.
3:00 pm Dust devle blew through site.
3:18 pm Trucks positioning for 4th haul causing some dust.
4:00 pm Watering site.
4:10 pm High winds. No other truck activity.

4-16

8:30 am Trucks loading 1st haul.
8:40 am Very gusty. Dust blowing across site from the west.
8:45 am Watering site.
9:30 am Watering site.
10:30 am Watering site.
10:55 am High gusty winds. Dust blowing from off site.
11:05 am 1st truck leaving with second load.
11:10 am Site well watered. No dust from truck activity.
11:34 am Still very gusty. Light dust.
11:35 am Watering outside fence.
12:02 pm Last truck leaving with 2nd load.
1:05 pm 1st truck loading up. Some dust.
1:15 pm Watering site.
1:25 pm Wallach truck dumping gravel for road. Wind out of SW blowing across site. Dump truck creating some dust.

1:40 pm Some dust in front of tent from trucks pulling out. Water truck watering in front of tent entrance.
1:50 pm Excavator driving out of tent to refuel. Dust blowing off of excavator across to monitor station.
2:10 pm Excavator spreading gravel in front of tent creating dust.
2:15 pm Guy wet down gravel to try and minimize dust.
2:25 pm Last truck leaving on 3rd haul.
2:30 pm Watering site.
2:50 pm 1st truck back for last load. Watering site.
3:25 pm 2nd truck pulling out of tent. Some light dust blowing.
3:35 pm 3rd truck backing into tent. Some light dust blowing.
3:45 pm 3rd truck pulling out of tent. Wind blowing dust across site.
4:00 pm 4th truck leaving tent. Blowing dust.
4:30 pm Watering site.

4-17

9:00 am Watering site.
9:47 am 1st truck leaving site. Three other trucks on site.
10:23 am Watering site.
10:26 am Breezy but low winds. Very little dust blowing.
10:30 am Last truck leaving.
11:10 am 1st truck back for 2nd haul. No dust blowing. Site well watered.
12:30 pm Last truck leaving.
1:47 pm Watering site.
2:00 pm Trucks loading 3rd haul. Winds picking up a little.
2:42 pm Last truck leaving site.
2:50 pm Watering site.
3:31 pm 1st truck back for 4th haul. Light to no dust. Site well watered. Light winds.
3:41 pm Watering dirt roads outside site fence.
4:05 pm 3rd truck loading up.
4:10 pm Dust devil in front of tent. Winds picked up blowing some dust.
4:30 pm All trucks are gone.
5:00 pm Watering site.

4-18

8:45 am Trucks positioning. Site well watered – no dust.
9:45 am Last truck leaving site. Excavator graveling road in front of tent. Visible dust.
10:45 am 1st truck back for 2nd haul.
11:00 am Dust blowing across site.
11:54 am Water truck watering in front of tent. Last truck leaving.
1:00 pm 1st truck loading 3rd haul. Two trucks on site.
1:37 pm Last two trucks on site.
2:00 pm Watering.

2:30 pm Watering roads.
2:55 pm Watering around trailers.
3:00 pm 1st truck back for 4th haul.
4:00 pm Last truck leaving.
4:45 pm Watering site for last time.

4-19

8:45 am Trucks positioning.
9:07 am Garbage truck 1 block on east side stirring up dust.
9:15 am Last truck leaving.
9:27 am Water truck watering.
10:48 am Watering around site perimeter.
11:00 am 1st truck back for 2nd haul.
1:00 pm Watering site.
2:50 pm Watering roads.
3:07 pm Dust from trucks.
3:20 pm Watering site.
3:42 pm Trucks returning.
4:50 pm Watering site.

4-22

8:40 am Watering site.
8:45 am Trucks positioning. Site well watered. Overcast, no wind.
11:00 am 2nd haul. Last truck leaving.
11:45 am Watering site.
1:00 pm Trucks loading 3rd haul. Tractor moving gravel. Dusty. Water truck watering.
2:00 pm Water truck watering.
3:00 pm Trucks loading last haul.
4:00 pm Last truck leaving. Tractor moving gravel to repair pot holes.
4:10 pm Watering site.
5:00 pm Watering site.

4-23

7:30 am Watered site.
1:00 pm 1st truck back loading 3rd haul.
1:41 pm Watering site.
3:15 pm 4-wheelers, motorcycles kicking up dust on south side of site.

4-24

7:45 am Water truck watering.

8:30-9:15 am Trucks loading up and leaving. Watering site.
10-11:00 am Trucks loading up and leaving.
1-2:00 pm Watered site. Trucks loading 3rd haul.
3-4:00 pm Watered site. Trucks last load for the day.
5:45 pm Bad dust storm.

4-25

8:45 am Trucks loading 1st haul.
9:30 am Last truck leaving. Water truck watering.
10:30 am Trucks loading 2nd haul.
11:30 am Raining.
1:00 pm Trucks loading 3rd haul.
3:00 pm Loading last haul.
4:00 pm All trucks gone. Rainy and cloudy most of the day.

4-26

8:45 am Trucks positioning for 1st haul using Cobb. Site muddy and wet.
Overcast.
10:20 am Trucks loading 2nd haul.
1:15 pm 3rd haul.
3:20 pm 4th haul

4-27

Watered site.
4-wheelers riding outside site.

4-28

Watered site. Gusty.

4-29

8:30 am Trucks loading 1st haul.
11:00 am Trucks loading 2nd haul.
1:00 pm 3rd haul.
3:30 pm 4th haul.
4:45 pm Site well watered.

4-30

7:30 am Site well watered.
8:30 am 1st haul loading.

9:15 am Manlift delivered.
9:30 am Watering site and in front of tent.
10:30 am Windy w/high gusts.
11:30 am Windy and high gusts. Dust blowing.
12:00 pm Watering site.
1:15 pm Wind blowing dust across site and in neighborhood.
1:30 pm Manlift positioning in front of tent.
1:31 pm A lot of dust blowing – mostly from off site and some from trucks moving around. High winds.
1:45 pm Watering site.
1:51 pm Dust blowing east across site from off site.
2:00 pm Street sweeper on Berry Street stirring up dust.
2:06-2:15 pm Sweeper making a pass along north end of site perimeter. Lots of dust.
4:15 pm Site well watered. Manlift leaving.
4:40 pm Watering site.

5-1

7:30 am Site watered.
8:45 am Loading 1st haul.
9:30 am Watering site. Trucks gone.
10:00 am Winds picking up – gusty. Site well watered.
10:17 am Street sweeper on Tasker on southeast end of site – stirring up a lot of dust.
11:13 am Loading 2nd haul. Two trucks on site.
11:25 am Dust storm blowing through site. Very dusty.
11:36 am Water truck watering on and off site. Gusty winds. Lots of dust from off site.
1:10 pm 1 truck on site loading 3rd haul. Very dusty windy/dusty.
1:30 pm Water truck watering site.
1:42 pm Very gusty winds blowing dirt across site. Site well watered. Two trucks on site for 3rd haul.
3:00 pm Two trucks back on site for 4th haul.
3:47 pm Watering site.
4:30 pm Watering site.

5-2

7:30 am Site watered.
8:41 am Trucks moving around loading 1st haul.
11:00 am Loading 2nd haul. One truck on site.
11:17 am Two more trucks on site for 2nd haul.
1:15 pm Two trucks on site for 3rd haul.
2:08 pm Wallach dumping load of clay.
3:15 am Repairing tear in front of structure with manlift. One truck on site – 4th haul.

5-3

7:30 am Watering site.
8:40 am Trucks loading 1st haul. 4 dump trucks on site.
8:57 am Wallach truck dumping load of clay in front of east station some dust.
10:07 am Wallach truck dumping another load of clay. No other truck activity.
11:00 am Watering site.
11:30 am Wallach dumping another load of clay. Trucks leaving with 2nd haul.
1:15 pm Trucks loading 3rd haul.
1:30 pm Wallach dumping load of clay.
2:45 pm Watering site.
3:15 pm Truck back for 4th haul. One dump truck on site.
4:00 pm Wallach bringing another load of clay.
4:45 pm Watering site.

5-4

6:00 pm Kids on 4-wheelers outside site on south side.

5-5

Rainy, windy and hail.

5-6

8:30 am Site activities beginning. Four trucks on site. Ground wet from weekend rains.
10:30 am Loading 2nd haul.
10:15 am Wallach – load of clay.
11:00 am Vacuum truck in front of office. Site wet still – no visible dust.
11:20 am Wallach – load of clay.
11:40 am Winds picked up – blowing dust across site.
1:30 pm Watering site. Trucks loading 3rd haul.
3:00 pm 1st truck back for 4th haul.
4:10 pm Dust storm blew through site.

5-7

8:30 am Site activities beginning.
9:30 am Water truck watering site.
10:30 am Very dusty from wind.
11:30 am Very dusty from wind. Watering site. Trucks loading 2nd haul.
1:00 pm Windy.
1:10 pm Trucks back for 3rd haul.

1:45 pm Water truck watering.
2:30 pm Shut down site operations due to wind and dust blowing into neighborhood. Excavator moved back into structure.
2:50 pm Watering site and in front of tent. Put extra water around clay mounds.
2:55 pm Truck back for 4th haul. Work commenced after watering down site.
3:09 pm Two more trucks on site.
3:40 pm Watering site.
4:00 pm Wallach dumping load of clay.
4:30 pm Watering site.

5-8

7:30 am Watered site.
8:20 am Trucks positioning for 1st haul.
9:18 am Watering site. All other trucks loaded and gone. No other site activity.
10:00 am Windy. Site well watered.
10:04 am Wallach dumped another load of clay. No visible dust blowing.
10:30 am No truck activity. Site well watered.
11:00 am Trucks returning for 2nd haul.
11:15 am Kids riding 4-wheelers outside site fence on south and west end.
11:35 am Winds picked up blowing dust.
11:47 am Watering front of tent.
11:50 am Huge mass of dirt and dust blew across site. Site well watered.
12:05 pm Dust blowing across site.
1:35 pm Wind gust blew large mass of dust across site. No truck activity at this time.
1:45 pm 1st truck back for 3rd haul. Site well watered.
2:35 pm Dumping load of clay. School bus riding along fenceline stirring up dust.
3:07 pm 1st truck back for 4th haul.
3:30 pm Watering site.
4:15 pm Last truck gone.
4:30 pm Watering site.

5-9

8:30 am Trucks positioning for 1st haul. Site well watered.
9:30 am Last truck leaving.
9:45 am Site still damp.
10:55 am Watering site. Soil saturated. First truck back for 2nd haul. One truck on site.
11:15 am Three trucks on site; one in tent; one waiting; one in tire wash.
11:45 am Last truck gone. No other site activity.
12:40 pm Water truck saturated entire site.
1:10 pm Trucks returning for 3rd haul.
2:00 pm Last truck gone.
2:34 pm Watering site.

3:13 pm Trucks back for 4th haul. Two truck on site.
3:50 pm Last two trucks on site for 4th haul.
4:00 pm Watering site.
4:10 pm Excavator pulling out of tent to park near clay mounds.

5-10

8:00 am Watered site.
9:00 am Truck activity beginning. Only two trucks on site for the day.
9:20 am Site well watered.
10:15 am Site still damp. Activity inside structure – front end loader moving dirt.
No other site activity.
11:00 am Truck back on site to reload – 2nd haul.
1:25 pm Two trucks on site to haul.
2:02 pm Watering site. No other site activity.
2:45 pm Still no site activity. Nothing else for today.
5:00 pm Watered site.

5-11

Watered site.

5-12

Watered site.

5-13

No site activity for trucks or other dirt moving equipment.
9-10:45 am Sampling in tent.
11:15 am Watering site.

5-14

10:40 am Watering site. No other site activity.

5-15

7:30 am Watered site.
8:40 am Watered site. No other site activity.
1:00 pm Began moving clay from mounds outside structure inside. Two trucks, and excavator and a water truck all in area near monitor station. Lots of dust from excavator dumping clay into dump trucks.
1:41 pm Watering down clay as excavator loads trucks to minimize blowing dust.
3:20 pm Still loading trucks – dusty.
3:30 pm Water truck watering down clay with hose.

5-16

7:45 am Watering site.
8:30 am Watering site and roads. Watering roads near caliche pit off site.
9:30 am Watering site. No trucks on site – at caliche pit loading backfill.
9:38 am 1st truck back on site with 1st load of backfill.
9:40 am Truck dumped load in front of structure – dusty. Dozer pushing dirt into structure to create new ramp – dusty.
10:15 am Watering site.
10:40 am Watering site.
10:45 am Truck pulling onto site kicked up dust along road.
11:15 am Watered in front of structure to minimize dust off moving vehicles.
1:15 pm Watering site and in front of structure. Trucks coming and going every 10-15 minutes unloading backfill.
1:30 pm Watering site and in front of structure.
1:50 pm Watering inside structure, around site and in front of structure. Trucks still hauling in caliche.
3:00 pm Trucks gone – no site activity.
3:30 pm Trucks back to unload caliche about 10 minutes apart.
3:45 pm Watering in front of structure and truck ramp.
4:05 pm Two trucks on site unloading.

5-17

8:00 am Watered roads and site.
9:00 am No site activity yet. Trucks @ pit loading caliche.
9:10 am Truck returning to site to unload caliche. Not a lot of dust off truck.
9:45 am Unloading caliche. Watering in front of tent.
10:30 am Trucks dumping caliche still about every 10 minutes. Windy some dust.
Dust blowing from off site.
11:30 am Watering site and in front of tent.
1:00 pm Work resumed. A little dusty.
4:00 pm Garbage trucks on north side of site kicking up dust.
4:20 pm Watered site.

5-18

Watered site. No other site activity.

5-19

Watered site. No other site activity.

5-20

8:33 am Site activity beginning. Trucks leaving to caliche pit.
9:00 am Back from pit. Trucks every 10 minutes back and forth.
12:00 pm Four trucks on site to unload.
1:30 pm Truck backing into structure with caliche. Three vehicles (not dump trucks) in corner by station all with their engines on.
1:45 pm Watered site.
2:00 pm Site well watered.
2:15 pm Two trucks on site – one coming and one leaving – some dust.
3:00 pm Truck leaving.
3:27 pm Watering in front of tent and on site.
3:45 pm No site activity.
4:00 pm 1 truck on site to unload. Not much dust.
4:15 pm 2 trucks on site to unload.
4:20 pm 3 trucks on site.
4:30 pm Truck pulling out of tent. Lots of dust. Last load today.
4:40 pm Vehicle parked outside tent entrance and left running.
4:45 pm Watering site.

5-21

8:30 am Site activity beginning. Watered site.
9:00 am Trucks back from pit. Watering site.
10:00 am Trucks every 10 minutes from pit. Windy – some dust.
12:00 pm Watered site.
1:30 pm Trucks every 10 minutes from pit. Windy. Watering site.
4:00 pm Site activities cease.
5:00 pm Watering site.

5-22

8:00 am Watered site.
8:30 am Watering site. Site activity beginning. Trucks going to pit to unload caliche.
9:27 am Site saturated. Truck backing into structure to dump caliche.
9:37 am Truck backing into structure to unload. Site saturated – no dust from tires-dust blowing off trailers as they pull out.
11:20 am Watering inside tent.
11:28 am Truck on site to unload.
11:37 am Trucks every 10 minutes.
1:15 pm Dust storm blew through neighborhood to the north of site.
1:45 pm Watered site twice in a row in front of structure to saturate since winds are drying it up quickly. Trucks pulling out of structure. No tire dust. Guy pulling away from structure.
1:50 pm All trucks gone. No site activity.
2:16 pm Truck returning to site with load.

** The water truck waters three different areas; the site within the fence, the parking area and dirt roads leading to site. Each area is watered approximately every fifteen minutes.

6-4

8:30 am	Site activity beginning. Crane on site.
9:10 am	Manlift in corner where east monitor station was. Crane crew rigging up crane near south station.
10:45 am	Finished crane assembly.
11:30 am	Watering around structure where working.
11:45 am	Watering site thoroughly.
1:20 pm	Huge dust storm blew through site.
3:30 pm	Dust storm blew through site.
4:40 pm	Dust storm.

6-5

5:00 am	Site work began. Structure moving crew preparing for structure move.
10:00 am	Manlifts in operation.
	Moved structure.

6-6

8:30 am Moving 2nd half of structure. Crane, manlift and forklift in use.

6-7

Repairing fabric on structure. Manlift and forklift in use.

6-8

Repairing structure. Manlift and forklift in use.

6-10

Reconstructing duct work. Moving south monitor station.

6-11

Assembled carbon filter system.

6-12

Reconstructed sound barriers.

6-13

Reconstructed sound barriers. Got monitor stations on line.

6-14

Reconstructed sound barriers.

6-18

8:25 am Site activity beginning.
8:40 am Truck 1 positioning and backing into structure. Water truck watering site.
Truck 2-3-4 waiting on site. Small dump truck and backhoe excavating
behind structure. Watered behind structure to minimize dust off backhoe.
9:07 am Truck 2 in structure. Truck 3-4 waiting.
9:30 am Truck 3-4 gone.
9:52 am No site activity except small dump truck and backhoe behind structure.
10:47 am Truck 1 back on site to reload. Watering site.
11:00 am Truck 2 on site.
11:20 am Truck 3 backing into structure. Truck 4 on site and waiting.
11:30 am Wallach truck dumping a load of clay. (near east monitor station)
11:40 am Truck 4 leaving.
1:10 pm Truck 1 back on site to reload. Water truck watering.
1:22 pm Truck 2 in structure. Truck 3 waiting on site.
1:37 pm Truck 4 in structure.
1:47 pm Last truck leaving site. No other site activity except backhoe and small
dump truck behind structure.
2:45 pm Truck 1 back on site for last haul. Waiting at tire wash for
workers/observers to get out of structure.
3:30 pm All trucks back and waiting. Excavator digging inside structure. Small
dump truck and backhoe still working behind structure. Watering site.
No other hauling for today.

6-19

8:35 am Site activity beginning. Watering site and behind structure to minimize
dust from small dump truck and backhoe. First truck backing into
structure. Truck 2-3-4 waiting.

EXECUTIVE SUMMARY

A program to remediate contaminated soils was performed between March and October 2002 at the Westgate subdivision in Hobbs, New Mexico. During this remediation, air monitoring was conducted to measure particulate matter (PM) as PM₁₀ and the meteorological parameters of wind speed, wind direction, and ambient temperature.

A portion of the Westgate Subdivision is built on property that is directly adjacent to the former oil and gas production facilities on the Grimes Lease. The subdivision is located on the western side of Hobbs and consists of single-family residences. The tank battery and other production facilities have been removed, but some soils in the vicinity of the Grimes Tank Battery were contaminated with crude oil. The Shell Exploration and Production Company performed an extensive remediation of soils on developed and undeveloped properties adjacent to and including portions of the Westgate Subdivision.

The objective of the Phase II monitoring was to monitor particulate matter concentrations at the site during remediation activities. The data was used to modify site activities or institute other control mechanisms, as appropriate, to maintain PM concentrations below a predetermined threshold value.

Ambient measurements began in March of 2002 and continued throughout the remediation with the exception of an approximate two week period in early June when the stations and excavation structure were being relocated. The particulate monitoring was conducted using a Ruppercht and Patashnick TEOM monitor. This unit has U.S. EPA equivalency for PM₁₀ monitoring (EQPM-1090-079). The meteorological monitoring sensors were manufactured by MetOne instruments and met all U.S. EPA requirements for PSD monitoring.

The pre-determined threshold value used in this monitoring is the U.S. EPA National Ambient Air Quality Standard (NAAQS) for 24-hour PM₁₀ of 150 µg/m³. During the 181 days of monitoring this threshold was exceeded at the East site on five days and was not exceeded at the South site.

1.0 Introduction

The Phase II Air Monitoring Study was performed during remediation activities conducted at the Westgate subdivision from March 2002 through October 2002. This report summarizes the results from the air monitoring study.

1.1 Site Description

The Westgate subdivision site is located in Hobbs, New Mexico. A portion of the Westgate Subdivision is built on property that is directly adjacent to the former oil and gas production facilities on the Grimes Lease. The subdivision is on the western side of Hobbs and consists of single-family residences built on relatively small lots. The tank battery and other production facilities have been removed, but some soils in the vicinity of the Grimes Tank Battery were contaminated with weathered crude oil residue. The Shell Exploration and Production Company remediated contaminated soils on developed and undeveloped properties adjacent to and including portions of the Westgate Subdivision.

There are homes immediately east and north of the site. The area to the west is an oil and gas field. There are oil and gas production facilities within a mile or two of the sites, including active wells to the west and processing facilities containing flares to the southwest of the site. The terrain in Hobbs is flat. In the area around the remediation site the natural vegetation is sparse and there are few trees to affect airflow patterns. The soils in this half of Lea County are characterized as "fine-loamy and clayey underlain by cemented calcium carbonate." According to the Hobbs Chamber of Commerce, the average annual rainfall is 14.6 inches and the average annual snowfall is five inches. There typically are 320 days of sunshine per year. The average summer daytime temperature in Hobbs is 80.1 °F, and its average winter daytime temperature is 33.9 °F.

1.2 Objective

The overall objective of the Phase II Air Monitoring Study was to monitor particulate matter concentrations at the site during remediation activities.

The data was to be used to modify site activities, as appropriate, to maintain PM concentrations below pre-determined threshold values.

1.3 Overview of the Phase II Scope of Work

The soil remediation was conducted between March and October of 2002. All activities were conducted within the confines of a large fabric structure designed to contain vapors and particulate matter that might otherwise be released during digging activities. The air from the structure was exhausted through an air pollution control system that removed particles and volatile organic constituents released during excavation and loading activities.

During the remediation effort, the excavation structure was moved several times as the excavation progressed. These moves resulted in the TEOM stations being moved twice. Figures 1-1 through 1-3 show the excavation structure in relation to the site boundaries and TEOM monitoring locations for each of these three locations.

Particulate matter was measured at two sites; one located west of the excavation structure (known as East site) with the other located south of the excavation structure (known as the South site). The two monitoring locations were selected based on the anticipated prevailing winds during the remediation period. This arrangement ensured that one site was generally downwind of site activities most of the time. PM concentrations were continuously measured with 30-minute, hourly, and 24-hour (rolling) averages calculated and stored in the instruments' data logger. The data were checked frequently by the on-site health and safety officer. If values exceeded predetermined threshold values, site activities were modified to reduce PM levels.

In addition to continuous PM monitoring, real-time (continuous) measurements were made for the following meteorological parameters:

- Wind speed;
- Wind direction; and
- Temperature.

These measurements were used to assist in the evaluation of the PM data. The overall data set was used to assess the potential impact from the remediation on the surrounding residents.

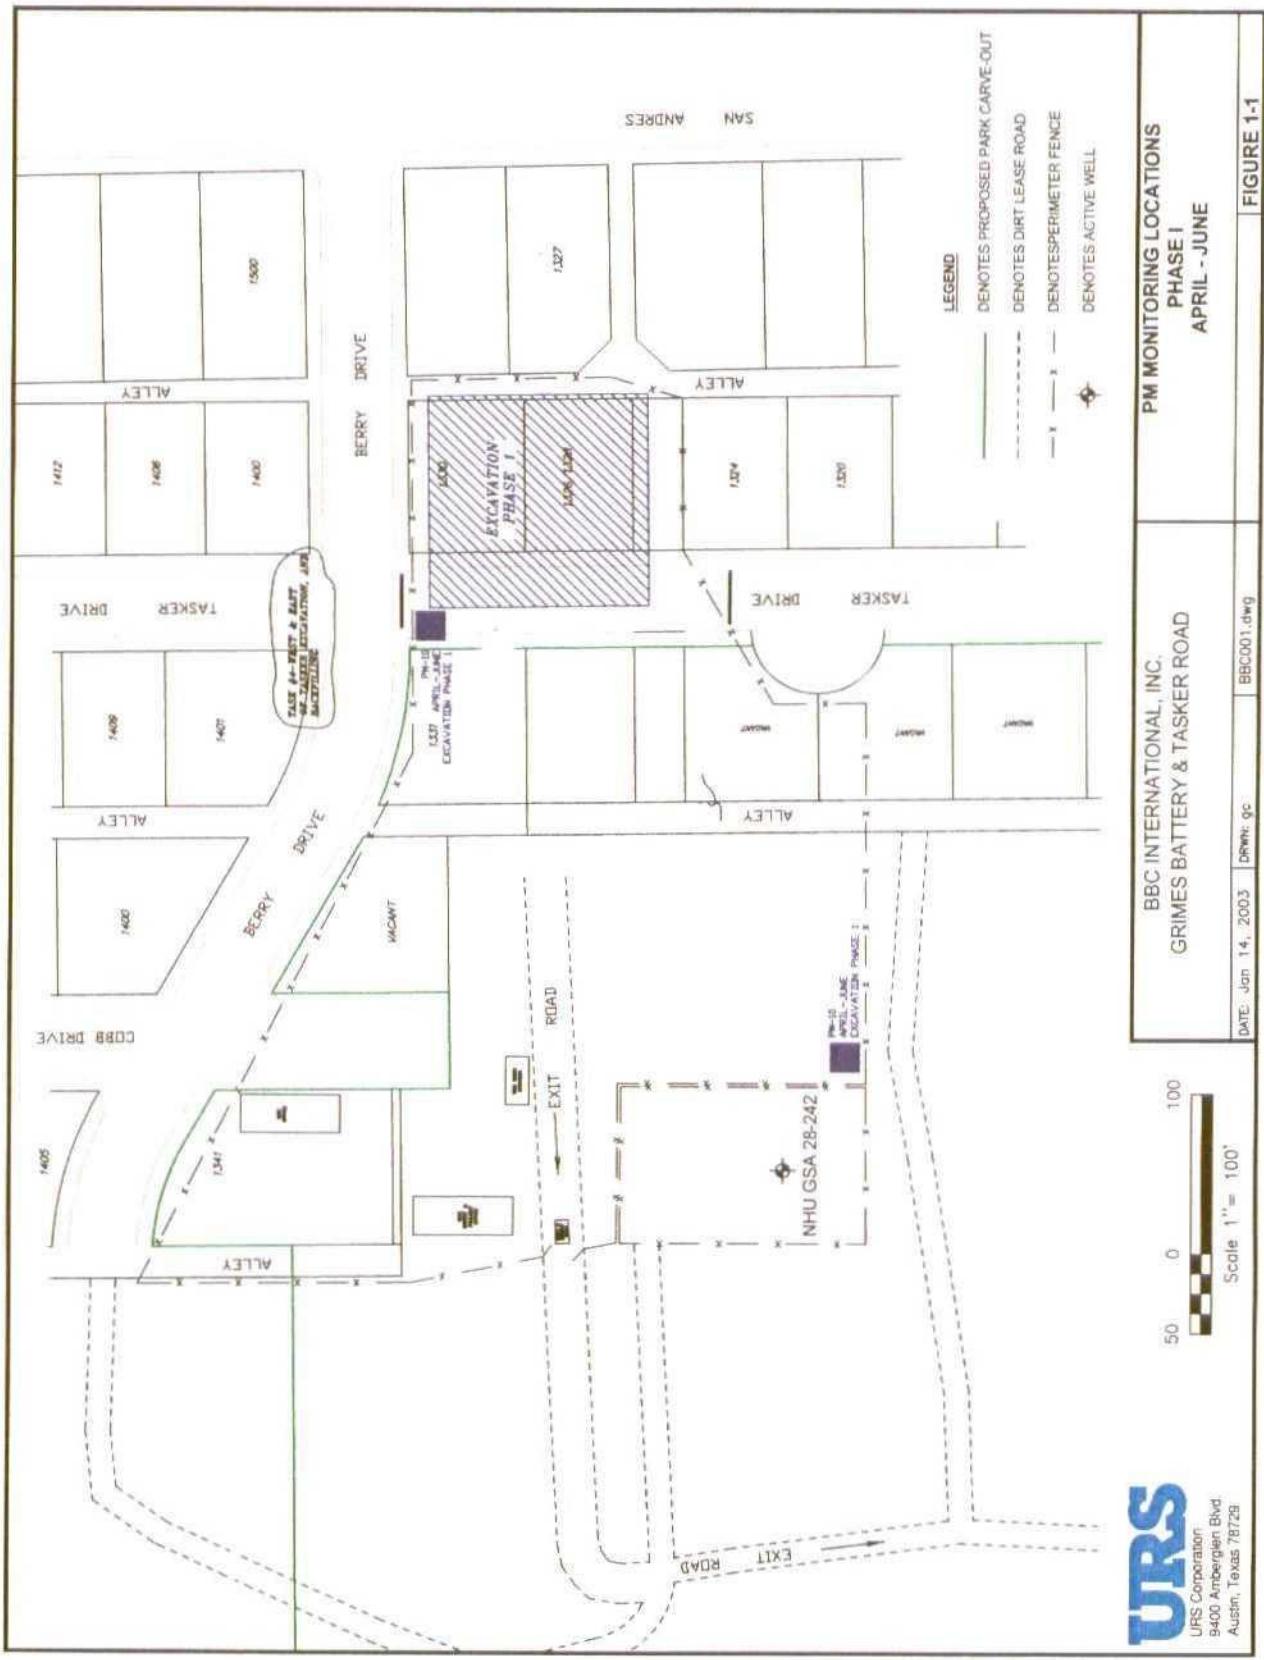

Figure 1-1. PM Monitoring Locations Phase 1, April - June

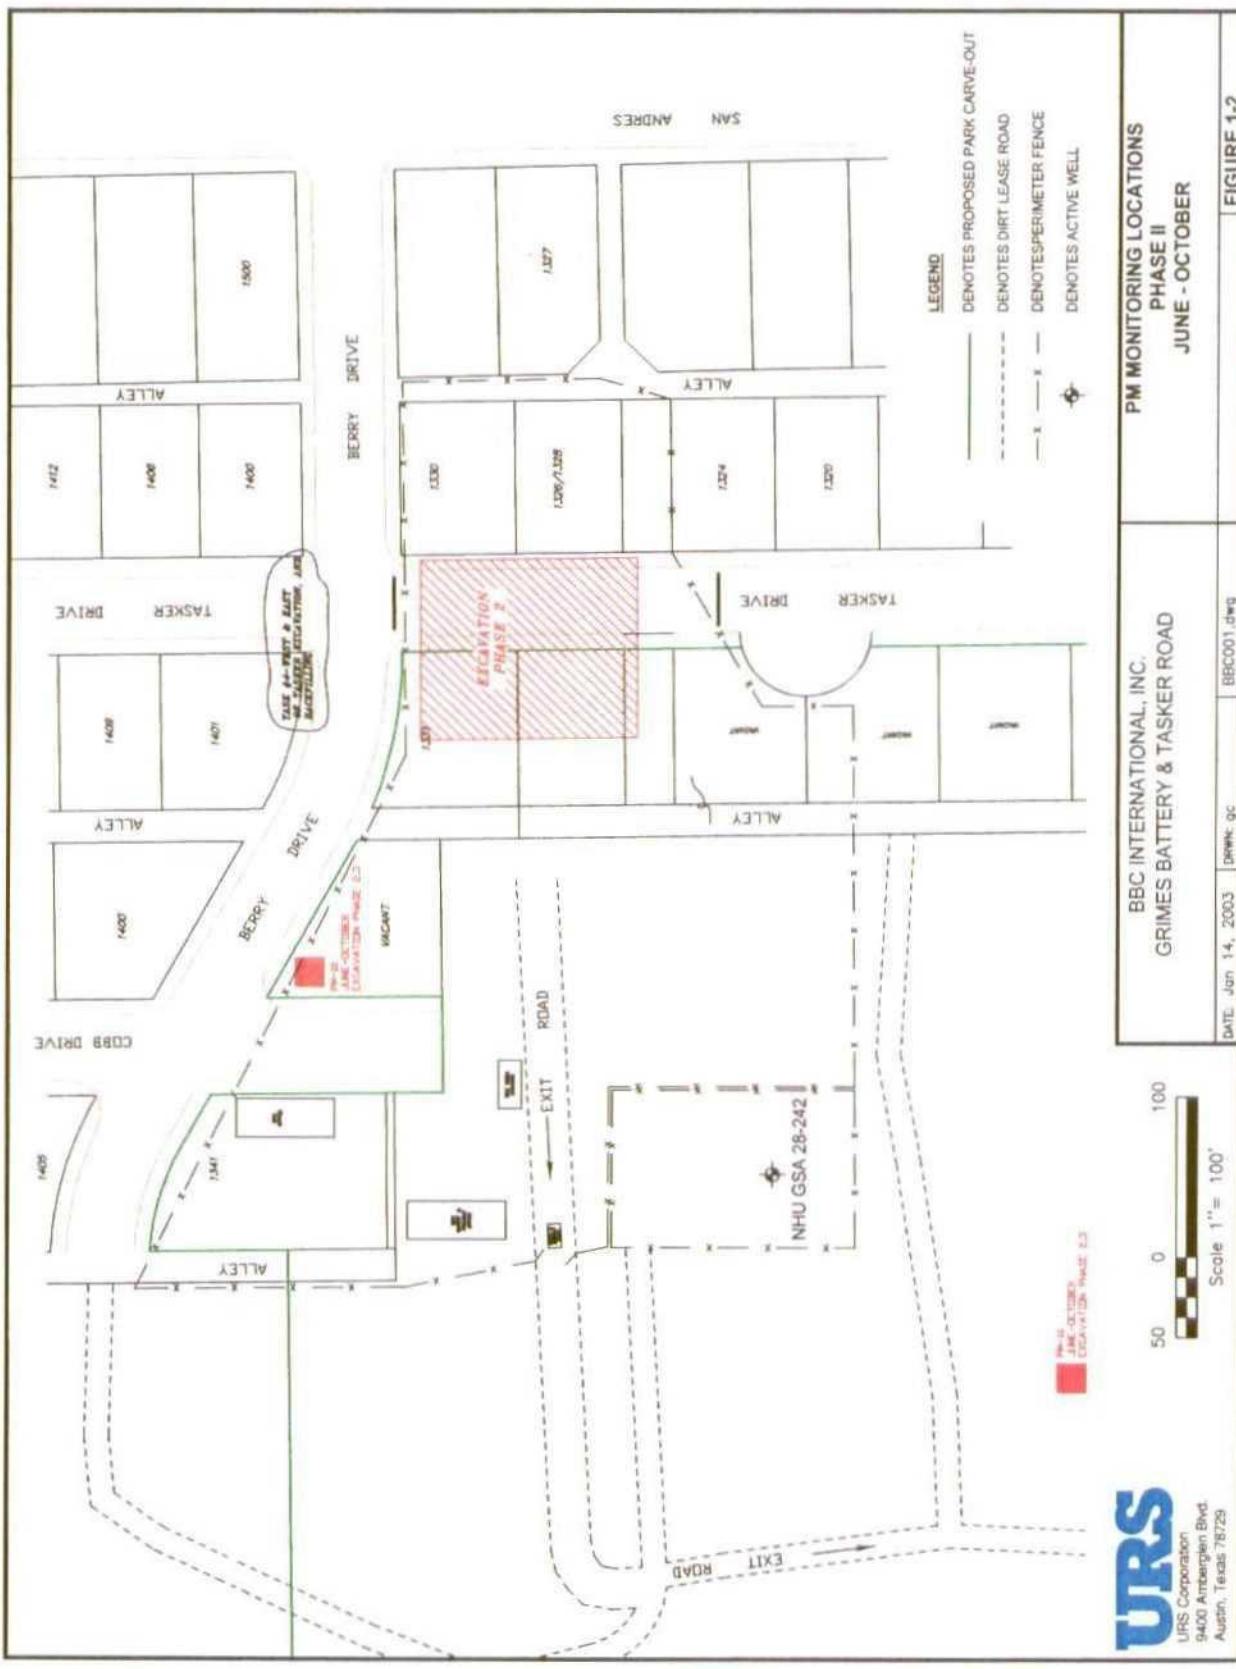

Figure 1-2. PM Monitoring Locations Phase II, June – October

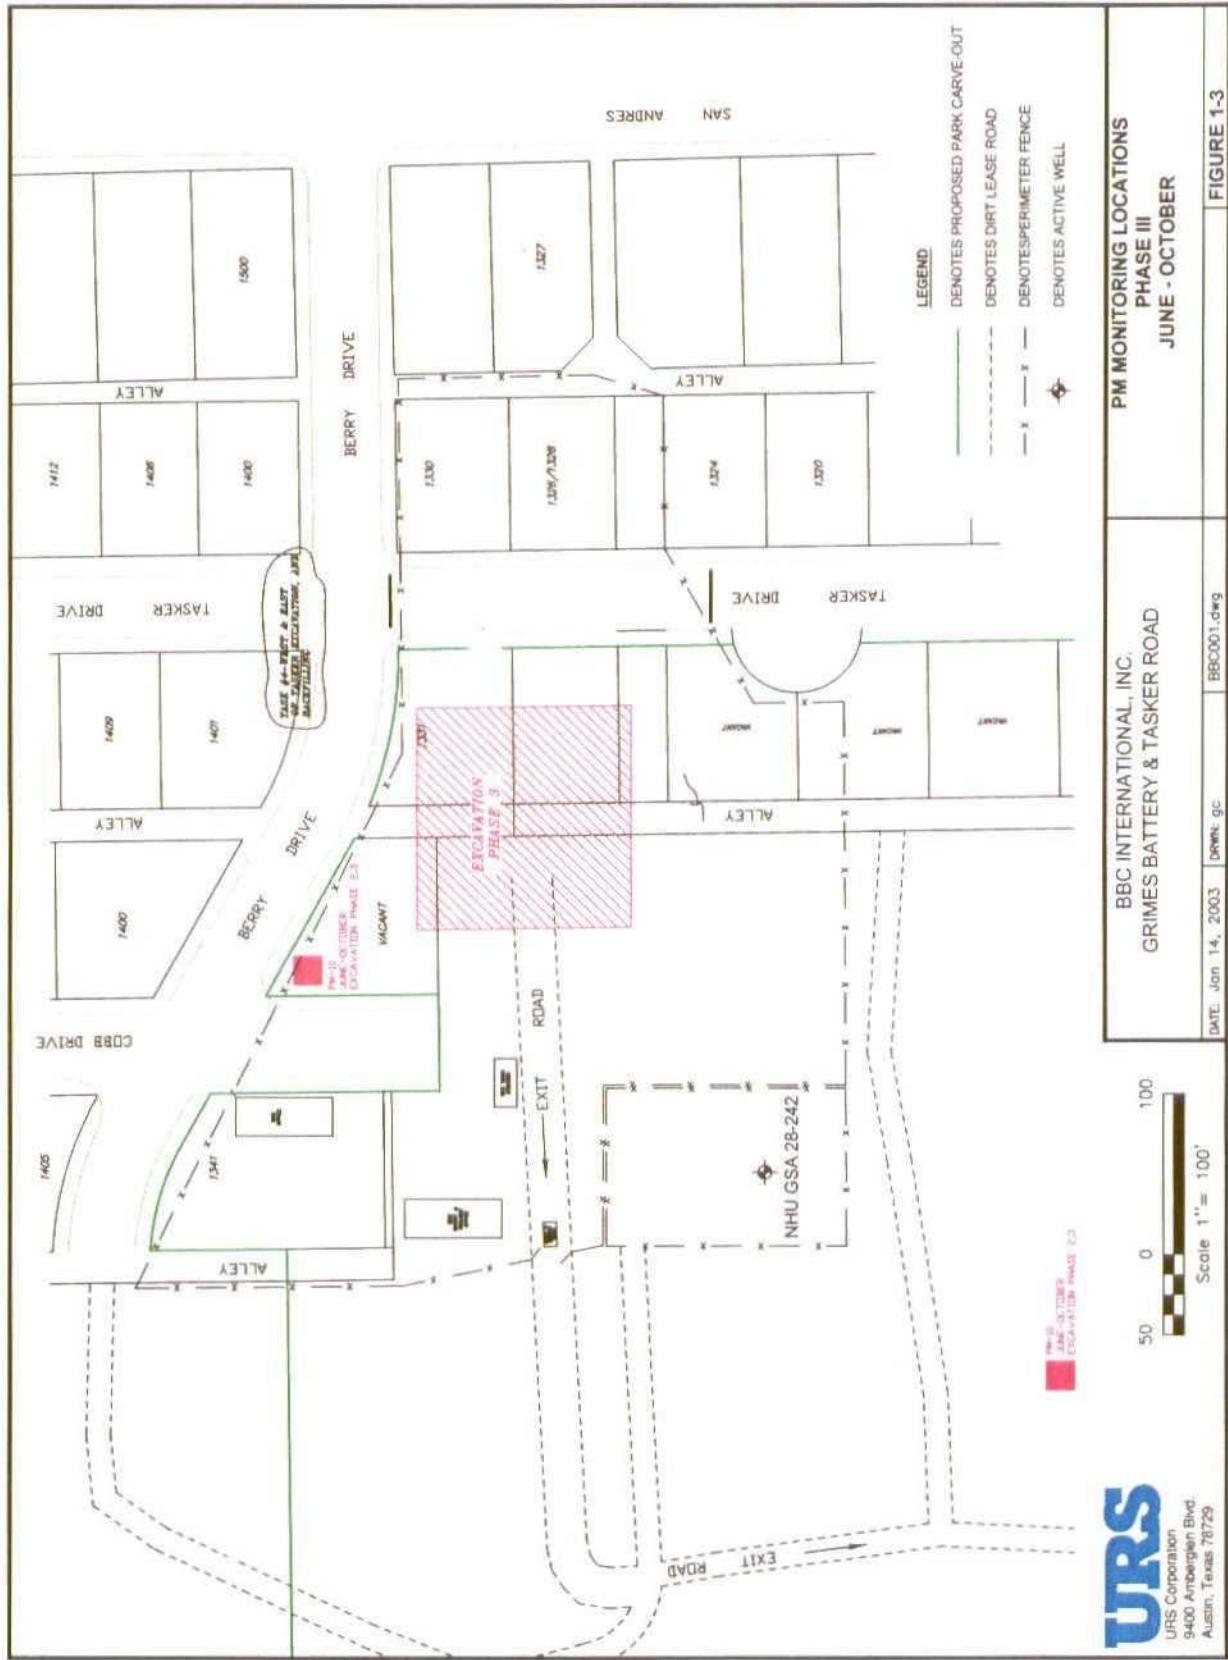

Figure 1-3. PM Monitoring Locations Phase III, June - October

2.0 Technical Approach

This section describes the sampling procedures that were used.

2.1 Monitoring Strategy

The ambient air quality was monitoring during the remediation activities and continuous PM data were reviewed along with wind direction data. In general, the goal was to maintain PM levels at the site at $\leq 150 \mu\text{g}/\text{m}^3$. When the net ground level (NGL) concentration of PM began to approach this value, various control strategies were put in place to reduce PM levels. (NGL = downwind minus upwind). This included spraying water to control dust generated by trucks entering and leaving the site.

The East and South monitoring sites were positioned in accordance with predicted prevailing winds during the site activities. The South site was south of the fabric structure and the East site was west of it. The exact locations of the monitoring sites are shown in Figures 1-1 through 1-3. The meteorological monitoring site was located near one of the construction trailers.

2.2 Sampling Procedures

The PM and meteorological monitoring procedures are described below.

2.2.1 Procedures for Collecting Particulate Matter Samples

The respirable particulate matter (PM_{10}) was monitored continuously using a Rupprecht and Patashnick Company tapered element oscillating microbalance (TEOM). This unit uses a size-selective inlet to separate atmospheric particles into that fraction less than 10 microns (PM_{10}) and those greater than 10 microns. The PM_{10} fraction is then measured using the microbalance. Averages were calculated every 30 minutes, 1-hour, and 24-hours.

Each TEOM unit was equipped with a data logger capable of storing several months of PM data. The data were periodically downloaded by modem and the data (as 1-hour averages) were archived in an Oracle database for ambient data. On a regular basis, the data were reviewed and edited.

2.2.2 Meteorological Monitoring

The meteorological parameters of wind speed, wind direction, and ambient temperature were continuously monitored on-site. The station began operation on April 9, 2002 and was operated continuously during the remediation effort. The sensors were installed and calibrated at the start of the project using approved U.S. EPA methodology. MetOne Instrument sensors were used along with a Campbell Scientific data logger to store the data and calculate parameter averages and wind standard deviation. The sensors were mounted on a telephone pole at a height of approximately 10m. The pole was situated so it would provide accurate, representative data. On a regular basis, the data were reviewed and edited.

3.0 Results of Testing

This section presents the results of the air measurements performed during the remediation effort.

3.1 Results of Meteorological Monitoring

A 10-meter meteorological monitoring system was used to collect wind speed, wind direction, and ambient temperature data during the remediation effort. The data collection began on April 9, 2002 and continued until October 7, 2002.

A wind rose for the monitoring period (9 April through 7 October 2002) is shown in Figure 3-1. The wind rose shows that predominant winds during the program were southerly and easterly. Southerly winds (south southwest to southeast) accounted for 58% of the observed winds while easterly winds (east northeast to east southeast) accounted for 23% of the observed winds. The remaining wind direction vectors (northerly and westerly) represented less than 4% each of the observed winds. The hourly average meteorological data for wind speed, wind direction, and ambient temperature are presented in Appendix A, while monthly wind roses are presented in Appendix B.

3.2 Results of Particulate Matter (PM_{10}) Monitoring

The TEOM monitoring began operations on 27 March 2002. Table 3-1 presents a summary of the PM data collected during the monitoring program. The table shows the 24-hour average PM concentration and the maximum concentration during that 24-hour period. Appendix C contains the 1-hour average TEOM PM_{10} concentrations. Appendix D contains graphs of the 1-hour average TEOM concentrations with both sites graphed together. These data show that generally the concentrations measured at the two sites were virtually identical.

During the installation, a piece of fiberglass insulation was accidentally trapped in the sample line between the PM_{10} sampling head and the microbalance of the South site (upwind) monitor. This fiberglass acted as an in-line filter and resulted in values recorded by this unit prior to May 17th (when the problem was discovered and alleviated) being biased low. In addition, there is a gap in the TEOM data between 29 May and 13 June when the stations were shut down and moved. There were no remediation activities during this period, as this coincided with the repositioning of the excavation structure.

Figures 3-2 through 3-5 show the PM_{10} 24-hour average concentration for each day of the monitoring program at the two sites. These graphs show that 24-hour average PM_{10}

concentrations exceeded $150 \mu\text{g}/\text{m}^3$ (equal to the National Ambient Air Quality Standard (NAAQS)) at the East site during 5 days out of approximately 180 days of the monitoring program. The South site did not register any days when the 24-hour PM₁₀ concentration averages exceeded $150 \mu\text{g}/\text{m}^3$. Wind roses for the five days when 24-hour PM₁₀ concentrations exceeded $150 \mu\text{g}/\text{m}^3$ are shown in Appendix E. During four of the five days (May 1, 6, 7, and 8) when 24-hour PM₁₀ concentrations exceeded $150 \mu\text{g}/\text{m}^3$, winds were from the west and southwest and on the fifth day (September 27), winds were from the south and southwest. West and southwest winds would place the East site monitoring station upwind of the excavation structure, making it unlikely that site activities were the source of the elevated PM. Appendix F presents site notes from each day that site activities occurred.

On the five days when the average PM₁₀ concentration exceeded $150 \mu\text{g}/\text{m}^3$ the site logs were evaluated to determine if either site activities or natural forces could have contributed or caused the elevated levels. On May 1, 2002, the site logs showed no abnormal site activities that appear to have caused the elevated PM levels. The wind speeds during the day time hours (0900 to 1700 hours), however, ranged from 16 to 25 mph and averaged 19 mph. Site notes indicated "dust storm blowing through site" and "lots of dust from off site."

The second day with elevated PM was May 6, 2002. During the morning the ground was wet from rain from the night before. Around noon, the winds started to pick up and afternoon hourly average wind speeds ranged from 17 to 23 mph. The site notes indicated that a dust storm was blowing through the site at 1610 hours. This corresponded with an hourly PM average of $1231 \mu\text{g}/\text{m}^3$. This value was nearly twice the next highest value measured on this day.

May 7, 2002 also had high afternoon winds, with hourly averages ranging from 17 to 25 mph. Site notes indicate that wind blown dust was particularly high on this day and site activities were ceased at 1430 hours. Following the cessation of site activities the PM levels remained high with the highest 1-hour average PM value measured the hour following the cessation of site activities.

The average 24-hour PM₁₀ value for May 8, 2002 was only slightly above the NAAQS standard at $151 \mu\text{g}/\text{m}^3$. The afternoon winds had hourly averages ranging from 18 to 25 mph. The site logs indicate that the site was kept well watered during the day but that there were several periods when very heavy dust levels were observed blowing across the site.

The final day with a 24-hour PM concentration in excess of the NAAQS was September 27, 2002. On this day, two 1-hour PM averages exceeded $1000 \mu\text{g}/\text{m}^3$. These values occurred

between 1500 and 1700 hours during 13 to 14 mph winds. The site log notes that during this time the site was well watered but that it was windy. The log also notes that there was a “lot of dust blowing off trucks across site.” It is possible that the two hours of elevated PM could be attributed to dust from the trucks. The PM values at the South site were approximately one fourth as high as those measured at the East site.

In summary, it appears that for at least four of the five days with 24-hour average PM concentrations in excess of $150 \mu\text{g}/\text{m}^3$ that high winds at the site resulted in the elevated PM levels and not site activities. During the fifth day, it is possible that site activities may have had an impact on the measured concentrations.

The East site Pollution Rose (Figure 3-6) shows that the highest average PM_{10} concentrations were observed when winds were from the north northwest ($58 \mu\text{g}/\text{m}^3$), even though this wind vector only accounted for 1% of the total winds. The next highest average PM_{10} concentration occurred during south southeast winds ($58 \mu\text{g}/\text{m}^3$). The South site Pollution Rose (Figure 3-7) showed the highest average PM_{10} concentration when winds were from the north northeast ($62 \mu\text{g}/\text{m}^3$). This wind vector, however, only accounted for 2% of the total winds. The next highest concentration ($59 \mu\text{g}/\text{m}^3$) was observed during northeast winds (4% of the total winds).

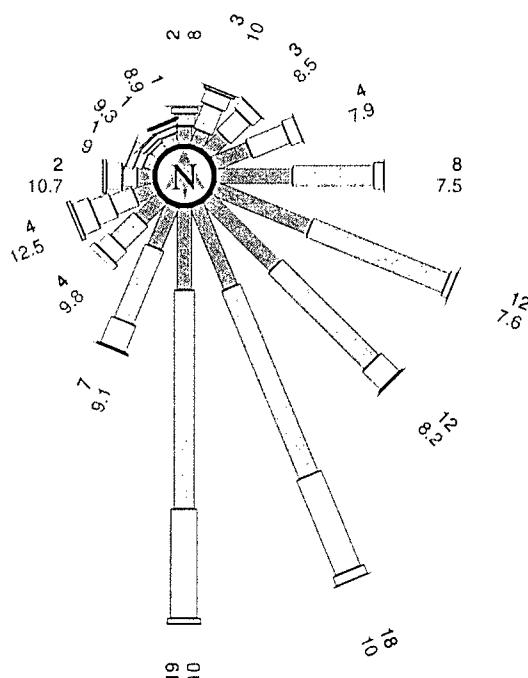

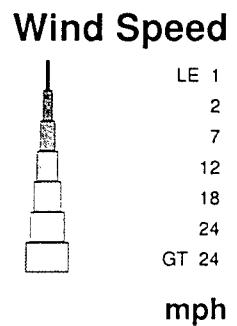

Tables 3-3 and 3-4 show PM_{10} concentration along with wind conditions (wind speed and direction) for all 1-hour PM_{10} concentrations exceeding $150 \mu\text{g}/\text{m}^3$ for the East and South monitoring sites sorted in decreasing concentration. The East site had 180 1-hour PM_{10} values that exceeded $150 \mu\text{g}/\text{m}^3$, with 155 measured when there were valid meteorological data. Of these values, 78 occurred when winds were from the southwest vectors (south southwest to west southwest).

The South site recorded 53 hours when 1-hour PM_{10} values exceeded $150 \mu\text{g}/\text{m}^3$, with 49 measured when there was valid meteorological data. Of these 49 values, the highest values were observed either during northeast winds (north northeast to east northeast) or south winds (south southeast to south southwest). Seventeen of the 49 values were observed during northeast winds while another 17 values were observed during south winds.
