Nature and Volume of Release

Material (s) Released (Select all that apply and attach calculations or specific justification for the volumes provided below)

Crude Oil	Volume Released (bbls)	Volume Recovered (bbls)
Produced Water	Volume Released (bbls) 40 BBL	Volume Recovered (bbls) 0 BBL
	Is the concentration of dissolved chloride in the produced water >10,000 mg/l?	Yes No
Condensate	Volume Released (bbls)	Volume Recovered (bbls)
Natural Gas	Volume Released (Mcf)	Volume Recovered (Mcf)
Other (describe)	Volume/Weight Released (provide units)	Volume/Weight Recovered (provide units)

Cause of Release

A hammer union (located outside of secondary containment) on the water transfer line failed, allowing produced water to be released outside of the secondary containment of the battery. Please note – the field foreman provided an estimate of the volume released as 40 BBL of produced water, no recovery. There has been a delay in getting an aerial photo of the wetted area to use for a calculation as it approaches the end of the 24-hour required notification period. I will make that part of the subsequent report for the assessment and clean-up of the release.
