Re: Site Assessment Summary and Remediation Plan
Natural Gas Gathering Line #11117 Leak Location 3
GPS: Latitude 32.297579 Longitude -104.255423
UL "P", Sec. 14, T23S, R26E
Eddy County, NM
NMOCD Ref. No. NRM2016955206

Tasman Geosciences, Inc. (Tasman), on behalf of DCP Operating Company, LP (DCP), has prepared this Site Assessment Summary and Remediation Plan for the condensate and natural gas Release Site known as the Natural Gas Gathering Line #11117 Leak Location 3. Details of the release are summarized below:

RELEASE DETAILS			
Type of Release:	Natural Gas, Condensate	**Volume of Release:**	Unknown
		Volume Recovered:	Unknown
Source of Release:	6" Steel Gas Gathering Pipeline	**Date of Discovery:**	7/19/19
Was Immediate Notice Given?	Not Required	**If, YES, to Whom?**	N/A
Was a Watercourse Reached?	No	**If YES, Volume Impacting the Watercourse:**	N/A
Surface Owner:	Montclair Development Corporation	**Mineral Owner:**	NA
Describe Cause of Problem and Remedial Action Taken:			
Seeping natural gas was discovered due to small pipeline failure (hole open under pressure). Field investigation and assessment of recent analytical data of the release estimated the volume of any associated hydrocarbon liquids was less than the NMOCD reporting thresholds (less than 5bbls). DCP is opting to submit a C-141 as a courtesy notification.			

Site Characteristics Map is provided as Attachment #1. General Site Photographs are provided as Attachment #6. A Copy of the Initial Release Notification and Corrective Action (NMOCD Form C-141) is provided as Attachment #8.

REGULATORY FRAMEWORK

Surface impacts from unauthorized releases of crude oil, gases, produced water, condensate or other oil field waste which occur during normal oilfield operations are generally regulated by the New Mexico Oil Conservation Division (NMOCD) in accordance with 19.15.29 of the New Mexico Administrative Code (NMAC). 19.15.29 NMAC establishes reporting, site assessment/characterization, remediation, closure, variance and enforcement procedures. Table I of 19.15.29.12 NMAC determines the closure criteria for soils impacted by a release based on the depth to groundwater and the following site characteristics:

Site Characteristics	
Approximate Depth to Groundwater	**~197 Ft.**
Within 300 ft. of any continuously flowing or significant watercourse?	☐ Yes ☑ No
Within 200 ft. of any lakebed, sinkhole, or playa lake?	☐ Yes ☑ No
Within 300 ft. of an occupied permanent residence, school, hospital, or institution?	☐ Yes ☑ No
Within 500 ft. of a spring or private, domestic fresh water well?	☐ Yes ☑ No
Within 1,000 ft. of any fresh water well?	☑ Yes ☐ No
Within the incorporated municipal boundaries or within a municipal well field?	☐ Yes ☑ No
Within 300 ft. of a wetland?	☐ Yes ☑ No
Within the area overlying a subsurface mine?	☐ Yes ☑ No
Within an unstable area?	☐ Yes ☑ No
Within a 100-year floodplain?	☐ Yes ☑ No

A search of a groundwater database maintained by The Office of the State Engineer (OSE) was conducted to determine the average depth to groundwater within a 1 Mile radius of the Release Site and identify any registered water wells within a 1/2 Mile of the Release Site. If none were identified, the approximate depth to groundwater was extrapolated from a Depth to Groundwater Map utilized by the NMOCD. Depth to groundwater information is provided as Attachment #5.

Based on the approximate depth to groundwater and site characteristics, the NMOCD Closure Criteria are as follows:

Table I
Closure Criteria for Soils Impacted by a Release

Minimum depth below any point within the horizontal boundary of the release to ground water less than 10,000 mg/l TDS	Constituent	Method*	Limit**
≤ 50 feet	Chloride***	EPA 300.0 or SM4500 Cl B	600 mg/kg
	TPH (GRO+DRO+MRO)	EPA SW-846 Method 8015M	100 mg/kg
	BTEX	EPA SW-846 Method 8021B or 8260B	50 mg/kg
	Benzene	EPA SW-846 Method 8021B or 8260B	10 mg/kg

SITE ASSESSMENT SUMMARY

From July 29, 2019 to July 31, 2019 Tasman personnel conducted oversight on initial remediation activities. Oversight included management of impacted soil within the relevant pipeline right-of-way that was previously excavated by DCP maintenance crew during line repair activities. A total of approximately 24 cubic yards of material was hauled, under manifest, to a NMOCD-approved disposal facility. Two (2) 5-point composite samples were taken from the base and sidewalls of the excavated area and submitted to the laboratory for analysis of total petroleum hydrocarbons (TPH) and chloride (Cl-) concentrations. Laboratory analytical results indicated that TPH and/or Cl- concentrations from the collected soil samples were above applicable NMOCD Closure Criteria (Table I).

Between October 22, 2019 and January 28, 2020, Tasman personnel revisited the Release Site three (3) additional times in an effort to complete additional site characterization, excavate identified hydrocarbon impacted soil, collect confirmation soil samples and transport/dispose of excavated soil to a NMOCD-approved disposal facility. During the assessment, two (2) composite method soil samples were collected from the base and sidewalls of the open excavation and submitted to an NMOCD-approved laboratory for analysis of TPH, BTEX, and/or Chloride. Based on the remediation activities described above, the confirmation soil sample analytical results indicate that BTEX and Cl- concentrations are below the NMOCD Closure Criteria and are no longer a constituent of concern. TPH still remains above the NMOCD Closure Criteria of 100 ppm. A table summarizing laboratory analytical results from soil samples collected during the January 28,2020 site assessment is provided below.

Concentrations of Benzene, BTEX, TPH, and/or Chloride in Soil

Sample ID	Date	Depth	Soil Status	SW 846 8021B		SW 846 8015M Ext.					EPA 300
				Benzene (mg/kg)	BTEX (mg/kg)	GRO C_6-C_{10} (mg/kg)	DRO C_{10}-C_{28} (mg/kg)	GRO + DRO C_6-C_{28} (mg/kg)	MRO C_{28}-C_{35} (mg/kg)	TPH C_6-C_{35} (mg/kg)	Chloride (mg/kg)

Wall 5pt.	1/28/2020	4'	In-Situ	<0.050	<0.300	<10.0	13	13.4	11.6	25.0	16.0
Closure Criteria				**10**	**50**	**-**	**-**	**-**	**-**	**100**	**600**

A " Site Overview Map" is provided as Figure 2 (Attachment 2). Field Data, if applicable, is provided as Attachment #4. Laboratory analytical reports are provided as Attachment #7.

SOIL BORE DELINEATION

In an effort to determine the vertical and horizontal extent of soil impacts, DCP proposes to install one (1) soil bore utilizing an air rotary drilling rig. Soil samples will be collected at equal intervals and field screened for chlorides and hydrocarbons. Representative soil samples from soil bore will be submitted to an NMOCD-approved laboratory for analysis of TPH.

A "Proposed Soil Bore Location Map" is provided as Figure 3 (Attachment 3).

REMEDIATION PLAN

Based on laboratory analytical results, site characteristics and field observations made during the site assessment, DCP proposes the following remediation activities designed to advance the Release Site toward an NMOCD approved closure:

•Utilizing mechanical equipment, advance excavation vertically and horizontally in the areas exceeding a Total TPH of 100 mg/kg until laboratory analytical results from excavation confirmation soil samples indicate concentrations of TPH are below the NMOCD Closure Criteria.
• Excavated soil will be temporarily stockpiled on-site, atop a poly liner, pending transportation under manifest to an NMOCD-approved disposal facility.
• Upon receiving laboratory analytical results from confirmation soil samples below the NMOCD Closure Criteria, excavated areas will be backfilled with locally sourced, non-impacted "like" material. The affected area will be contoured and/or compacted to achieve erosion control, stability and preservation of surface water flow to the extent practicable.

SAMPLING PLAN

Upon completion of remediation activities, representative five-point composite confirmation soil samples will be collected from the base of the remediated area, representing no more than 500 square feet. Confirmation grab soil samples will be collected from the sidewalls of the remediated area in each cardinal direction, representing no more than 50 linear ft. Additional "discrete" confirmation soil samples will be collected from any excavation grade changes and wet or visibly stained areas inferred to have been affected by the Release, if applicable.

TIMELINE AND ESTIMATED VOLUME OF SOIL TO BE REMEDIATED

Remediation activities are expected to be completed within 90 days of receiving necessary approval(s) of this *Site Assessment Summary and Remediation Plan* . Based on laboratory analytical results, site characteristics and field observations made during the site assessment it is estimated approximately 200 cubic yards of soil has been affected above the NMOCD Closure Criteria.

If you have any questions, or if additional information is required, please feel free to contact Stephen Weathers or the undersigned by phone or email.

RE: DCP

Enclosed are the results of analyses for samples received by the laboratory on 01/28/20 16:05.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-19-12. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accreditated through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Celey D. Keene

Surface Owner: ☐ State ☐ Federal ☐ Tribal ☑ Private *(Name:* Montclair Development Corporation

Nature and Volume of Release

Material(s) Released (Select all that apply and attach calculations or specific justification for the volumes provided below)

☐ Crude Oil	Volume Released (bbls)	Volume Recovered (bbls)
☐ Produced Water	Volume Released (bbls)	Volume Recovered (bbls)
	Is the concentration of total dissolved solids (TDS) in the produced water >10,000 mg/l?	☐ Yes ☐ No ☑ NA
☑ Condensate	Volume Released (bbls) Unknown	Volume Recovered (bbls) Unknown
☑ Natural Gas	Volume Released (Mcf) Unknown	Volume Recovered (Mcf) Unknown
☐ Other (describe)	Volume/Weight Released (provide units)	Volume/Weight Released (provide units)

Cause of Release:
Seeping natural gas was discovered due to small pipeline failure (hole open under pressure). Field investigation and assessment of recent analytical data of the release estimated the volume of any associated hydrocarbon liquids was less than the NMOCD reporting thresholds (less than 5bbls). DCP is opting to submit a C-141 as a courtesy notification.

Was this a major release as defined by 19.15.29.7(A) NMAC? ☐ Yes ☑ No	If YES, for what reason(s) does the responsible party consider this a major release?
If YES, was immediate notice given to the OCD? By whom? To whom? When and by what means? (phone, email, etc)?	

Initial Response

The responsible party must undertake the following actions immediatedly unless they could create a safety hazard that would result in injury

- ☑ The source of the release has been stopped.
- ☑ The impacted area has been secured to protect human health and the environment.
- ☑ Release materials have been contained via the use of berms or dikes, absorbent pads, or other containmei
- ☑ All free liquids and recoverable materials have been removed and managed appropriately.

If all the actions described above have not been undertaken, explain why:

Per 19.15.29.8 B. (4) NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please attach a narrative of actions to date. If remedial efforts have been suffessfully completed or if the release occurred within a lined containment area (see 19.15.29.11 (A)(5)(a) NMAC), please attach all information needed for closure evaluation.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Site Assessment/Characterization

This information must be provided to the appropriate district office no later than 90 days after the release discovery date.

What is the shallowest depth to groundwater beneath the area affected by the release?	~197 (ft bgs)
Did this release impact groundwater or surface water?	☐ Yes ☒ No
Are the lateral extents of the release within 300 feet of a continuously flowing watercourse or any other significant watercourse?	☐ Yes ☒ No
Are the lateral extents of the release within 200 feet of any lakebed, sinkhole, or playa lake (measured from the ordinary high-water mark)?	☐ Yes ☒ No
Are the lateral extents of the release within 300 feet of an occupied permanent residence, school, hospital, institution, or church?	☐ Yes ☒ No
Are the lateral extents of the release within 500 horizontal feet of a spring or a private domestic fresh water well used by less than five households for domestic or stock watering purposes?	☐ Yes ☒ No
Are the lateral extents of the release within 1000 feet of any other fresh water well or spring?	☒ Yes ☐ No
Are the lateral extents of the release within incorporated municipal boundaries or within a defined municipal fresh water well field?	☐ Yes ☒ No
Are the lateral extents of the release within 300 feet of a wetland?	☐ Yes ☒ No
Are the lateral extents of the release overlying a subsurface mine?	☐ Yes ☒ No
Are the lateral extents of the release overlying an unstable area such as karst geology?	☐ Yes ☒ No
Are the lateral extents of the release within a 100-year floodplain?	☐ Yes ☒ No
Did the release impact areas **not** on an exploration, development, production, or storage site?	☒ Yes ☐ No

Attach a comprehensive report (electronic submittals in .pdf format are preferred) demonstrating the lateral and vertical extents of soil contamination associated with the release have been determined. Refer to 19.15.29.11 NMAC for specifics.

Characterization Report Checklist: ***Each of the following items must be included in the report.***

- ☒ Scaled site map showing impacted area, surface features, subsurface features, delineation points, and monitoring wells.
- ☒ Field data
- ☒ Data table of soil contaminant concentration data
- ☒ Depth to water determination
- ☒ Determination of water sources and significant watercourses within ½-mile of the lateral extents of the release
- ☒ Boring or excavation logs
- ☒ Photographs including date and GIS information
- ☒ Topographic/Aerial maps
- ☒ Laboratory data including chain of custody

If the site characterization report does not include completed efforts at remediation of the release, the report must include a proposed remediation plan. That plan must include the estimated volume of material to be remediated, the proposed remediation technique, proposed sampling plan and methods, anticipated timelines for beginning and completing the remediation. The closure criteria for a release are contained in Table 1 of 19.15.29.12 NMAC, however, use of the table is modified by site- and release-specific parameters.

Remediation Plan

Remediation Plan Checklist: ***Each of the following items must be included in the plan.***

☒ Detailed description of proposed remediation technique
☒ Scaled sitemap with GPS coordinates showing delineation points
☒ Estimated volume of material to be remediated
☒ Closure criteria is to Table 1 specifications subject to 19.15.29.12(C)(4) NMAC
☒ Proposed schedule for remediation (note if remediation plan timeline is more than 90 days OCD approval is required)

Deferral Requests Only: ***Each of the following items must be confirmed as part of any request for deferral of remediation.***

☐ Contamination must be in areas immediately under or around production equipment where remediation could cause a major facility deconstruction.

☐ Extents of contamination must be fully delineated.

☐ Contamination does not cause an imminent risk to human health, the environment, or groundwater.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
