Subject: [EXT] Marathon Oil Company - Proposed Sampling Plan/Variance - Green Frog - NAPP2036443181
Date: Monday, January 11, 2021 3:35:40 PM
Attachments: [image002.png](#)

Good Afternoon,

In attempt to increase communication and awareness prior to requesting closure, I'm proposing a sampling plan for incident NAPP2036443181 associated with the flare burp at the Green Frog Café Federal 1H location. As less than 1 gallon of oil that was released from the flare self-extinguished before reaching the ground, I am confident that the samples that will be collected to characterize the incident would be under the remedial action levels and could therefor also potentially serve as closure confirmation samples as well. Sample locations L1-L4, illustrated below, will be collected all four cardinal directions around the source (flare) at the surface and at 0.5' and will be sent to the lab and analyzed for Chloride, BTEX and TPH. The sampling event is scheduled for January 19, 2021 at approx. 9am so please also consider this email the required notification required prior to the confirmation sampling event.

Thank you and have a great day.
