Re: Neill and Steffan, Sauble #3
Ne Ne, section 3-26N-24E
Colfax County, New Mexico

Dear Mr. Neill:

The form C-102's dated May 16, 1950, your Notice of Intention to Plug the above captioned well which you sent to the Hobbs office were sent to this office for attention, since the northeastern part of the state is now handled from our Santa Fe office.

In checking the well log of this well, we find that you have not noted the important water sands and the depths of these. Since in plugging a well we are charged with the responsibility of protecting all potable waters and minerals, we would like very much to have a log of the water zones encountered in this well. We should also appreciate a more detailed plan of your intended plugging operation and how you plan to protect these water zones. Since we do not have the form C-103 covering the results of your plugging back operations as described in your form C-102, Notice of Intention to Plug Back on this well, dated December 1, 1947, we are wondering whether or not you performed this operation. If the well was plugged back, we would appreciate a form C-103 describing the results of this.

We are returning your copy of the form C-103 which was sent to Mr. Yarbrough, as we have a copy of this in our file here at Santa Fe.

We would also appreciate your giving us the date which you plan to plug this well, so that we may have an inspector present if we so desire. In the meantime we are holding your form C-102, your Intention to Plug, until we have an answer to this letter.

Very truly yours,
STATE OF NEW MEXICO
OIL CONSERVATION COMMISSION

E. A. Uts
Gas Engineer

THE

Q.

THE

1. *Chlorophyll a* and *Chlorophyll b* were determined by the method of Arar and Collins (1971). The *Chlorophyll a* and *Chlorophyll b* contents were expressed as $\mu\text{g g}^{-1}$ of dry weight.

1. The first step in the process of identifying a problem is to define the problem. This involves identifying the symptoms of the problem and determining the scope of the problem. Once the problem has been defined, the next step is to identify the causes of the problem. This involves identifying the factors that are contributing to the problem and determining the underlying causes. Once the causes have been identified, the next step is to develop a plan of action. This involves identifying the steps that need to be taken to solve the problem and determining the resources that will be needed to implement the plan. Finally, the last step in the process is to implement the plan and monitor the results. This involves putting the plan into action and tracking the progress of the solution. Once the problem has been solved, the final step is to evaluate the results and determine if the solution was effective. This involves comparing the results of the solution to the original problem and determining if the problem has been solved. If the problem has not been solved, the process may need to be repeated.
