Mr. Lewis Sutin, Attorney
Rosenwald Building
Albuquerque, N. M.

Dear Mr. Sutin: RE: Olsen-Means No. 1 well, NW NW
27-7N-3E, Torrance County, N. M.

Investigating our correspondence on this well, we find a letter written by me dated March 13, 1951, which acknowledges receipt of samples from 3600 - 3686'. These samples were delivered to us by a person we believed to be Mr. McCall.

Upon searching for the samples, we found them in the basement with some odds and ends. Since these were marked 'Means No. 1' and had my name on them, we are virtually certain that these are the samples which were left by the above-mentioned person. Since these are small cuts of the original samples, it will be necessary for us to turn these over to the Bureau of Mines for their sample library. However, I will hold them here until after the trial before sending them down to Socorro.

Very truly yours,

E. A. Uts,
Engineer

REPORT OF THE

STATE GEOLOGIST
FOR THE YEAR
1900

BY
JOHN W. COOK,
STATE GEOLOGIST.

The report of the State Geologist for the year 1900 is a continuation of the work begun in the report for 1899. It contains a description of the geology of the State, and a list of the localities where the various rocks and minerals were found. It also contains a list of the localities where the various fossils were found. The report is divided into two parts, the first part containing a description of the geology of the State, and the second part containing a list of the localities where the various rocks and minerals were found. The report is written in a clear and concise style, and is well illustrated with numerous figures and tables. It is a valuable work for the geologist and the student of geology.

JOHN W. COOK,

STATE GEOLOGIST.

1901
