Mike:

I wanted to relay that Ike Tavarez with Tetra Tech will be handling the remediation of the 100 barrel crude oil spill at the Concho facility we previously discussed.

I relayed to Mike the things you indicated approval with during our phone conversation, which includes analysis may be limited to TPH and the BTEX compounds only with approximately 3-4 sidewall samples and 3-4 base samples collected for confirmation after our excavation has been completed. As noted, we anticipate excavating an area 100 feet by 190 feet, but are not quite sure yet how deep we will need to excavate on-site.

Of course, we will try to get this all completed and a final report submitted to you within the next 45-60 days if possible.

Can you confirm whether or not Concho Oil already submitted the C141 form to you?

Thank you.

Mike:

Thank you for the information you provided earlier. Could you please confirm whether or not the Concho Oil site in question ranks as a zero or some other number?
