Yates has further discussed this in-house and will move forward and use a liner in the bottom of the excavation as requested by OCD. However, since a synthetic liner will be used no caliche will be used in the backfill as stated in the work plan. All backfill will be clean, like material that we remove from the release area. Work will begin as soon as I have a crew available to start.

Thanks,
Amber

Amber,

Your remediation plan is approved with the following exceptions:

- Due to conflicting depth to ground water data, and the possibility that there may be shallower ground water in this area, OCD requests a liner be used.
- If 2RP-1859 (DOR:8/17/2013) occurred in the same location please ensure you include it in the closure report.

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.

If you have any questions or concerns, and for notification, please contact me.

Please find attached a work plan for the 8/12/2013 release that occurred at the Dolores AIL Federal #2 – Livingston Ridge (2RP-1857).

Yates would like to start this work by next Wednesday, 8/6/2014 or as soon as we are done with the work at the Martha AIK Federal #6 which is scheduled to begin Monday, 8/4/2014.

Should you have any questions, comments, or need additional information, please let me know.

Thanks,

Amber Cannon
