Subject: RE: Correction 2RP-3684 Delineation Requirements

Please note the following correction.

After reviewing the work plan and data presented therein, the pooling area is not in the vicinity of 010, 011, and 012, but near the source of the release in the vicinity of sample locations 003 and 004 where the highest Cl values were detected.

Subject: 2RP-3684 Delineation Requirements

Mike,

I am emailing you after a conversation I had with Heather Patterson last Wednesday, June 22, 2016. We are working on project 2RP-3684 together with WPX Energy.

I understand Heather is on vacation this week and referred me to you with any questions.

Heather and I had discussed the delineation requirement after the second attempt to delineate the area and finding refusal at the restrictive layer. We discussed placing a liner in the areas where chloride exceeded 2,500 mg/Kg at the bedrock or at 4 feet below ground surface. We also discussed sampling a boring in the area of sample locations 010, 011, and 012 where the spill pooled. However, I did not receive this in writing and wanted to be sure we had OCD approval before continuing with the boring, excavation and liner placement.

If OCD grants approval to continue we would like to begin work beginning with the soil boring in the vicinity of 010, 011, and 012 on Wednesday, June 29, 2016.

Thank you for your time.

Sincerely,

Kimberly Huckaba
